Professional Summary

Seasoned Software Developer with 7+ years of experience delivering robust, scalable, and secure software solutions.

I possess strong knowledge of Java, Spring Boot, Angular, REST APIs, Rust, and modern DevOps practices, and have a proven track record in modernising legacy systems, implementing microservices architectures, and managing full development lifecycles.

In addition to my technical skills, I have experience leading and mentoring junior developers, boosting team productivity, and maintaining code quality through effective guidance and reviews.

As a passionate Full-Stack Developer, I invest my time and energy in continuous learning, cross-functional collaboration, and contributing to high-impact projects in dynamic environments.

Technical Skills

Languages & Frameworks:

Java (8, 21), Kotlin, Rust, JavaScript, TypeScript, Angular (8, 13, 18), Spring Boot, Hibernate, CSS (SCSS), Bootstrap, jQuery

Databases:

OracleDB, MySQL, MongoDB, PostgreSQL, DynamoDB

DevOps & Tools:

Docker, Kubernetes, AWS (Lambda, CloudFront, S3, Cognito), GitLab CI/CD, Jenkins, Git, Jira, Keycloak, Maven

Testing Frameworks:

JUnit, Mockito

Other Technologies:

Kafka, REST APIs, GraphQL, Microservices, OAuth, JSON, CSV, XML, UX/UI Design, Agile Methodologies

Operating Systems:

Linux (Ubuntu, Fedora), Windows

Work Experience

Job Search & Technical Skills Development

November 2024 – Present

Actively searching for job opportunities while developing new technical skills.

- Currently learning AWS, Rust, and Machine Learning.
- Building a portfolio project to demonstrate practical skills.

Tech Stack: AWS (Lambda, CloudFront, Cognito, DynamoDB, S3), Rust, Java 21, Angular, GraphQL, REST API.

August 2022 to November 2024

Full-Stack Java Consultant

CGI Canada <https://www.cgi.com/>

CGI is one of the biggest consulting companies in Canada. Across 21 industry sectors and 400 locations worldwide, we provide comprehensive, scalable and sustainable IT and business consulting services that are informed globally and delivered locally.

Was responsible for modernising legacy applications by integrating Spring Boot and Angular, implementing CI/CD pipelines, enhancing security, refactoring code for improved performance, and developing new UI components.

- Modernised legacy applications (built 2006) by integrating Spring Boot and Angular, migrating from JSP templates to a microservices architecture.
- Redesigned security layers and developed new UI components, improving application security and user experience.
- Created and maintained CI/CD pipelines using GitLab and Docker for automated deployments to test and production.
- Wrote comprehensive unit tests for legacy code, enabling safer refactoring and minimizing regression issues.
- Refactored data processing modules with Java Streams, reducing processing time from 25s to 15s.
- Developed a service to manage committee member activities, enabling effective tracking and outcome recording.
- Twice recognised with digital security awards for high-impact contributions.

Tech Stack: Java 21, Spring, Spring Boot 3, Angular, Docker, GitLab, OracleDB, MySQL, Kubernetes, JSP, CSS, Bootstrap 5, GitLab CI/CD, JUnit, Mockito.

October 2019 – May 2022

Senior Full Stack Developer - Java

National Bank of Ukraine, Kyiv, Ukraine <https://bank.gov.ua/en/>

The National Bank of Ukraine is a modern and independent central bank, leading the development of a financial ecosystem integrated into the European Central Bank Community. It employs up to 5,000 people nationwide.

Was responsible for designing application architecture, implementing backend and frontend features, coordinating with security and licensing departments, and leading UX/UI improvements for regulatory systems.

- Developed an application to manage all banks registered in Ukraine, enabling the licensing department to adopt a paperless approach for storing bank structure information.
- Built a configurable admin panel supporting dynamic form structures, reducing manual form handling.
- Created a modern Angular frontend to simplify reporting processes and decrease paperwork for financial institutions.
- Collaborated closely with licensing and security teams to ensure timely delivery and secure data workflows.
- Conducted Angular training seminars for staff, accelerating frontend adoption across projects.
- Managed and mentored two junior developers, overseeing task distribution, conducting code reviews, and providing ongoing technical guidance.

Tech Stack: Java 8, Angular, OracleDB, Bootstrap 5, JUnit, Mockito.

April 2019 – September 2019

Senior Full-Stack Developer - Java

Publishing House “Wheel of Life”, Ukraine <https://koleso-gizni.com.ua/uk-ua/>

A publishing company focused on psychological assistance literature with a dedicated team of psychologists. The company employs about 100 people.

Led the migration of a monolithic system to a microservices architecture, developed frontend features with Angular, implemented CI/CD pipelines, and created services for image processing and deployment automation.

- Migrated a monolithic application to microservices using Spring Boot, improving scalability and maintainability.
- Rebuilt the frontend with Angular, enhancing modularity and UI responsiveness.

- Developed an image-processing microservice for scaling, cropping, and storing images, reducing article preparation time by approximately 10 minutes.
- Set up CI/CD pipelines using Jenkins, cutting daily testing and deployment time by 2 hours.
- Introduced Docker and Kubernetes to enable containerized deployments and improved scalability.
- Mentored a junior developer, providing guidance on Java and Angular best practices, conducting code reviews, and accelerating onboarding and productivity.

Tech Stack: Java 8, Spring Boot, Docker, Kubernetes, Angular, MongoDB, JUnit, Mockito, Linux (server).

April 2018 to April 2019

Java Full-Stack Developer (Remote)

Plexsupply, New Jersey, USA <https://plexsupply.com/>

Plexsupply is an American company and one of the top 200 largest sellers on Amazon, making over 1 million sales per year.

Was responsible for developing and maintaining backend modules, implementing business logic for shipment calculations, and improving code quality through unit testing.

- Designed and implemented a shipment calculation module in Java to compute shipping costs based on item weight, quantity, and packaging dimensions.
- Developed logic to guide warehouse staff on box assembly instructions, ensuring efficient packing and reducing shipping errors.
- Built RESTful APIs for real-time pricing and shipping data exchange between internal services.
- Improved system reliability by increasing test coverage with JUnit and Mockito, reducing bug-related delays.
- Collaborated with front-end developers and logistics stakeholders to fine-tune business rules, enhancing order fulfillment accuracy and user experience.

Tech Stack: Java 8, JUnit, Mockito, JSP, MySQL.

Education

2012, National Aviation University, Kyiv, Ukraine

Master's in Communication Systems <https://www.nau.edu.ua/en/>

A leading technical university renowned for its engineering and aviation programs.

Online Courses Completed:

Spring Boot 3, Go, Python, Angular, Rust, AWS

Hobbies

- Long cycling
- Sketching
- Reading books

Personal Projects

1. Kindergarten Web Portal

Developed a web portal to manage client records, facilitate communication with parents, and track service usage.

Tech Stack: Java 8, Spring Boot, MySQL, Angular

2. Portfolio Website

Building a personal portfolio to showcase experience and projects.

Tech Stack: AWS (Lambda, CloudFront, Cognito, DynamoDB, S3), Rust, Angular, GraphQL, REST API.

My Publishing

Medium portal:

1. [Serverless Rust: Building and Deploying an Axum API on AWS Lambda.](#)
