EDUCATION

Bachelor of Science in Software Engineering

2020 - 2025

University of Calgary

Calgary, Canada

Coursework Operating Systems | Algorithms | Machine Learning | Databases | UI & UX

SKILLS

Languages Python | Java | C++ | C | PHP | JavaScript | HTML & CSS | SQL

Technologies Azure DevOps | React.js | Docker | MySQL | Flask | Plotly Dash | Jira | Junit

EXPERIENCE

PETRONAS Canada

Sep 2024 – Apr 2025

Asset Integrity Data Toolkit - Capstone Project

Calgary, AB

- Led front-end development using Python and Plotly Dash to create an interactive AI-driven web tool for erosion risk forecasting.
- Designed reusable Dash components and layout templates, improving development speed and maintaining visual consistency.
- Actively contributed to ML model design, including neural network architecture and feature engineering, leading to improved erosion forecasting accuracy and stakeholder confidence.
- Integrated neural network predictions into the interactive Dash interface, enabling users to visualize erosion risk and time-to-failure directly within the web platform.
- Collaborated in a 6-person Agile team using RACI charts to manage task ownership and sprint execution.
- Won 1st place at the 2025 University of Calgary Capstone Design Fair among 140+ projects.

Spend Savvy

Sep 2024 – Dec 2024

Technical Project

- Designed and developed a financial tracking platform supporting three user groups, enabling personalized expense breakdowns and goal-based savings insights.
- Applied user-centered design practices using Figma to iteratively prototype interfaces before implementing them with React, Vite, and TypeScript.
- Integrated PostgreSQL with GraphQL APIs to support efficient data access and dynamic querying for real-time financial insights.
- Containerized the full application with Docker and implemented CI/CD pipelines to streamline development and deployment workflows.

Starlight Screens

Jan 2025 – Apr 2025

Technical Project

- Redesigned the movie theatre website experience from a user-first perspective, focusing on improving common pain points found in real-world cinema interfaces.
- Developed a responsive, component-based front end using React and Vite, prioritizing accessibility and clean layouts.
- Applied usability heuristics and conducted iterative evaluations to enhance information clarity, user flow and overall usability.
- Led early-stage setup of the project environment, managing dependencies and establishing scalable development practices.

EMPLOYMENT

Chili Island

2015 – 2020

Waiter and Staff

Calgary, AB

- Provided hands-on assistance in keeping electronic systems operational, contributing to the smooth functioning of day-to-day business.
- Developed strong interpersonal and verbal communication skills through daily interaction with diverse customers and team members.

Candy Time

2015 – 2020

Sales Associate

Calgary, AB

- Frequently entrusted as backup with overseeing front-end operations, ensuring continuity of service and team coordination.
- Guided team activities during peak periods, supporting task delegation and maintaining operational flow.
