EDUCATION

York University

September 2020 - August 2025

Bachelor's, Specialized. Honors, Software Engineering – Security Stream

- **Relevant Courses:** Data Structures and Algorithms, Software Design, Operating Systems, Software Testing, Computer Networks and Forensics, Applied Cryptography

PROFESSIONAL EXPERIENCE

Selor Digital Services

Remote

Software Engineer Intern

November 2024 - February 2025

- Built responsive, production-ready web pages from **Figma** designs using **HTML**, **CSS (Tailwind)**, and **JavaScript**, improving UI consistency.
- Collaborated in **Agile sprints** via **Jira** to manage stories and facilitate code reviews, increasing team velocity by **20%**.
- Deployed and maintained web applications on **AWS** with **99.9% uptime**, implementing **CI/CD pipelines** for updates.

ABB

Brampton, ON

Junior Information Systems Analyst Intern

May 2022 - September 2023

- Automated error detection by developing **SQL scripts**, reducing troubleshooting time by **25%**.
- Performed audits for **25+ SSL configurations**, implementing improvements, strengthening security compliance by **30%**.
- Configured and deployed **Kronos time clock integrations** across **7 factories**, lowering transition downtime by **15%**.
- Collaborated with cross-functional DevOps teams using Agile workflows to optimize deployment efficiency.

ABB

Brampton, ON

Information Systems Application Intern

May 2021 - September 2021

- Streamlined resolution for **1,900+** technical issues across enterprise systems in **ServiceNow**, improving reliability.
- Automated **SOX** access report generation for **6+ applications**, ensuring full compliance and audit readiness.
- Created data validation scripts maintaining **99%** accuracy across integrated datasets.

PROJECTS

Auction E-Commerce System – Java, MySQL, Maven, WebSockets, Servlets, REST APIs, Tomcat, Docker, Git

- Built a **Java**-based auction platform with real-time bidding using **WebSockets** and **RESTful APIs**, integrating backend data through **JDBC** and **MySQL**.
- Designed a responsive frontend (**Figma**, **HTML/CSS**), managed dependencies with **Maven**, and containerized deployment using **Docker** on **Tomcat**.

Multi-LLM Code Reasoning – Python, asyncio, aiohttp, tqdm, JSON, Anthropic, OpenAI, Gemini, DeepSeek

- Built an evaluation framework to benchmark multiple **LLMs** on the **LiveCodeBench** dataset using asynchronous API querying with **aiohttp** and **JSON** output processing.
- Designed a multi-input testing pipeline to analyze reasoning robustness, generating structured reports with **tqdm** for task tracking and **HuggingFace** for model integration.

Plan Perfect – Java, JavaFX, MySQL, Open-Source Java API, Unit Testing, Git

- Created a feature-rich scheduling app using **JavaFX** and **MySQL** for data storage, enabling reminders and recurring events.
- Implemented unit testing for reliability and collaborated via **Git** for version control and workflow optimization.

Senior App Review Analysis – Python, Pandas, NumPy, NLTK, TextBlob, VADER, Groq, Gensim, Jupyter

- Developed an **NLP pipeline** to analyze Android app reviews using **TextBlob**, **VADER**, and **LDA topic modeling** to extract key user concerns.
- Collected and cleaned data via Google Play scraping, processed sentiment and topics with **Pandas** and **Gensim**, and summarized insights with **Groq LLMs** in **Jupyter**.

SKILLS

- **Languages:** Java, Python, C, C#, Kotlin, Arduino, MATLAB, BASH
- **Web Dev:** React.js, JavaScript, Node.js, HTML5, CSS3, Tailwind CSS
- **Databases:** MySQL, SQL Server, SQLite
- **Cloud & DevOps:** AWS, Azure, Docker, JIRA, CI/CD
- **Tools:** Git, GitHub, ServiceNOW, Microsoft Office, Adobe Cloud, Figma, Final Cut Pro, Power BI, UKG Kronos, Wireshark
