- ❖ Over 3 years of experience as an IT Developer with the Canada Revenue Agency. Strong background in coding, programming, software development, application testing, software analysis, program design, program development, program management, troubleshooting, process optimization, project planning, machine learning libraries (such as numpy), data management, and client services.
- ❖ Proficient communication, liaising, and leadership abilities (both working independently and as part of teams). Proven ability to establish a positive rapport with clients, colleagues, and superiors in software development and program support roles.
- ❖ Advanced user of *Microsoft Office Suite*, including *Excel*, as well as specialized software and applications, including *Android Studio*, *Blender*, *Unity*, *IBM Framework Manager*, and *IBM DataStage*.
- ❖ Coding Languages: Java, Python, C++, JavaScript React, Dartm Go, Racket, Prolog.
- ❖ Languages: English (fluent), Spanish (fluent), French (beginner).

Education

University of Ottawa | Ottawa, ON

2024

Bachelor of Computer Science, Honours

Experience

IT Developer | Canada Revenue Agency – Business Intelligence Section

2022- 2025

-
- Supported the development of a Java applet designed to streamline and automate key processes for the Business Intelligence team. Integrated the applet with existing systems to ensure seamless functioning.
 - Utilized Excel to keep track of records and accounts for discrepancies.
 - Conducted performance optimization, troubleshooting, and debugging on the applet, along with continual maintenance and upgrades to promptly resolve issues, minimize downtime, and ensure reliable operation.
 - Mastered essential software integral to the day-to-day operations of the Business Intelligence Section, including IBM Framework Manager and IBM DataStage. Actively participated in group knowledge transfer.

Developer - Smart Hallway Honours Project | Ottawa Hospital Rehabilitation Center

2024

-
- Improved a system designed to allow physicians to monitor patients' walking patterns via a ceiling-mounted hallway camera, developing an app to automate the system and enable remote operation.
 - Successfully developed a mobile application using the Flutter application within Android Studio, facilitating the automation of certain processes and enabling the system to be operated remotely.
 - Integrated Java and C++ in a Full Stack development workflow, using Java to operate the server connection between the app and the camera and using C++ to automate the camera action.

Student Software Developer | University of Ottawa – Department of Family Medicine

2022

-
- Collaboratively designed two educational games using JavaScript React and Unity, emphasizing immersive, intuitive, and user-friendly interfaces. Resolved technical issues throughout the development process.
 - Participated in weekly progress meetings to gather and implement feedback from the project manager, clients, and other stakeholders to inform front-end development and refine game features/ functionality.
 - Experienced using Github for version control and collaboration.
 - Coordinated end-user testing sessions to assess the games' effectiveness among volunteers and gather feedback and data to enhance the user experience.

Web Development Intern | Canada Revenue Agency – Intranet and Web Development Section

2021

-
- Gained familiarity with Java programming to support the development and enhancement of the CRA's intranet applications for product and personnel management. Participated in weekly strategy meetings.
 - Communicated with internal clients to better understand their needs and how these could be translated into intranet upgrades and new infrastructure for optimal functioning and an improved user experience.
 - Ensured compliance with all information security policies and protocols, supporting the responsible management of sensitive data throughout the information life cycle.
