EDUCATION

McMaster University

Bachelor of Applied Science in Computer Science

Hamilton, ON

CGPA 3.8 | September 2020 – April 2025

WORK EXPERIENCE

Government of Canada - IRCC

Software Developer - Telework

Ottawa, ON

April 2024 – April 2025

- **Brought an outsourced website into compliance with government coding standards by implementing thorough documentation, improving code readability, and resolving numerous legacy bugs.**
- Contributed to the full software development lifecycle, assisting in code delivery from pre-production to production environments.
- Completed various company-provided training sessions, including Salesforce, to enhance technical and platform knowledge.
- Utilized Microsoft Azure DevOps for ticket management, test case development, and sprint planning in an Agile environment.
- Refactored and documented JavaScript-based code base to improve performance, readability, and compliance with client formatting standards.

D&V ELECTRONICS

Jr. Software Developer

Woodbridge, ON

May 2023 – April 2024

- **Collaborated with a small team to upgrade an in-house application used as the primary interface for motor testers, adding new features and resolving bugs to improve usability and performance.**
- Fixed bugs in the Formula Editor, a feature in the Windows application (C#) used to test electrical motors.
- Developed a Log Viewer tool to parse and filter JSON logs, improving debugging efficiency.
- Created a hardware simulator using TwinCAT, implementing PID control logic for machine testing.
- Enhanced the Status Viewer to display error signals from machines or the TwinCAT simulator in real-time.
- Designed a Git-based local library for version control, improving script management across the application.

PROJECTS

Rooms4Rent | PostgreSQL, MongoDB, Golang, React, Docker

April 2025

- Developed a web app with automated rent processing, tenant/landlord verification, housemate matching, group applications, and a recommendation engine.

ChessAI | Python, scikit-learn, Pandas

December 2024

- Engineered an RNN model to predict chess game outcomes (White/Black win) using the first 20 moves, player ratings, and engine-evaluated positions.
- Outperformed basic CNN models by emphasizing human decision patterns over deterministic engine strategies, achieving 70% accuracy

Solar Flare Prediction | Python, Machine Learning

October 2024

- Created a machine learning model that predicts solar flare occurrences using a comprehensive dataset.

What To Eat App | Java, Android Studio, Firebase

August 2020

- Developed an app that suggests recipes with modifiable ingredients and displays nutrition facts.
- Integrated user authentication and populated the database with 5000+ recipes using a Python web scraper.

TECHNICAL SKILLS

Programming & Scripting: Python, Java, JavaScript, C#, C, Golang, Haskell, VB.NET, Shell, SQL, L^AT_EX, Bash

Web & Cloud Development: HTML, CSS, React, REST APIs, GraphQL, Microsoft Azure, Docker, GitHub Actions

Databases & Data Science: PostgreSQL, MongoDB, Firebase, SQLite, scikit-learn, Pandas, NumPy, TensorFlow

Tools & Frameworks: Git, TwinCAT, Azure DevOps, Salesforce, Android Studio, Visual Studio, JIRA, Unit Testing

Other: PID control, Hardware simulation, JSON parsing, Web scraping
