

Skills

Languages : Java, C, C++, Python, JavaScript, HTML, CSS, TypeScript, RISC-V, SQL, Bash

Frameworks/Libraries : Angular, SpringBoot, Flask, FireBase, RESTful API's

Technologies : Terminal, Git, CI/CD, Makefile, LaTeX, Nvim, VScode, Pycharm, IntelliJ, SQLDev, Visual Paradigm

Education

Bachelor in Computer Science and Software Engineering
University of Quebec in Montreal - Science Faculty

Expected Fall 2025

Diploma of College Studies in Science - Pure & applied
Vieux-Montreal Cegep - Science Faculty

Graduated 2020

Experience

Freelance Web Developer

2023 - Today

- Designed and developed **broclean.ca**, the official website for the barbershop where I work, using HTML, CSS and JavaScript.
- Integrated Fresha booking services to automate appointment scheduling and reduce manual calls.
- Built a fast, responsive interface optimized for desktop and mobile
- Deployed the site and managed domain setup, monitored performance and SEO improvements.
- Helped increase customer traffic and online engagement by providing a centralized platform for booking and discovering the barbershop as well as a user friendly and visually impressive website.
- Worked closely with the team and the owner to maintain content and adjust strategy based on customer feedback and website analytics.

Self-Employed - Senior Barber

2021 - Today

- Manage a schedule independently and build a loyal base of regular customers through high quality service.
- Ensure effective and professional communication with customers and colleagues to enhance the overall experience
- Actively contribute to the day-to-day running of the barbershop
- Master self-taught barbering and customer service techniques

Projects

Web Messaging Application (Full-Stack) | *Web Development*

Developed with **Angular, SpringBoot and Firebase** for a real-time messaging application with the following features:

- **WebSocket** integration for real-time notifications and messages
- Secure authentication with **JSON Web Token (JWT)** and session management
- Cloud deployment on **Firebase Hosting** and **Google Cloud Run**
- File and data management via **Firebase Storage and Firestore**

Medical AI Chatbot (Backend) | *Software Development and Maintenance*

Developed with **Python, Flask and Javascript**, with the following features:

- Implemented the OpenAI API in a Python application, with specific fine-tuning to adapt the model to medical queries, ensuring precise and relevant responses.
- Developed direct communication between the frontend and backend by integrating secure API calls with JWT token implementation.
- Established a mechanism to retrieve patient data from the database, allowing the chatbot to personalize its responses based on user information.

Mobile App for Collaboration (In progress) (Fullstack Flutter) | *Mobile Development*

Ongoing development of an **Android** and **IOS** designed to centralize project and event management within a visual collaborative space, accessible to professionals, family and social groups:

- Built with **Flutter** and **Firebase** (Auth, Firestore, Storage)
 - Implementation of collaboration *Spaces, Boards*
 - Real-time push notifications and live modifications within the app with the help of **WebSocket** integration
-
