Languages: Python, NodeJS, JavaScript, TypeScript, Java, SQL (PostgreSQL, MySQL), C#, HTML, CSS, Front-end frameworks (React, Angular, Vue)

Technologies: AWS (Lambdas, APIGateway, CloudFormation, EC2, S3, VPC, RDS, Cognito, SAM, IAM, CloudWatch, Secrets Manager, Route53), Azure (Functions, Key Vault, Virtual Machines, Blob Storage, Monitor, Key Vault Secrets), Docker, Github Actions, OpenAPI

Tools: Git (GitHub, Bitbucket), Postman, PgAdmin, Windows, OSX, Linux, Slack, Jira, Confluence

Professional Experience

Software Developer – Falcon Technologies Corporation (FTC) Jul 2020 – Mar 2025

- Full-stack developer with an emphasis on backend systems. Worked with real estate data and integrated with other companies: Relitix, Inside Real Estate, on behalf of Falcon Technologies.
- Wrote detailed, concise documentation in READMEs and Confluence knowledge bases.
- Reviewed PRs and remotely collaborated with 1-2 global teams using Jira tickets.
- Designed and deployed FastAPI, ExpressJS APIs across AWS and Azure, then set up additional infrastructure like EC2, Lambdas, CloudFormation, APIGateway.
- Achieved sub 3 second total execution times for each API request. Emphasized efficient data retrieval while designing relational databases and queries.
- Ran QA testing using frameworks and tools like Postman and test driven development.
- Rapid critical issue response: in 0-3 hours, Isolated bugs to specific sections of code, and developed solutions to resolve them. Collaborated with other teams to deploy urgent fixes.
- Shaved about 10-20 mins per deployment by creating automated GitHub Actions workflows, Docker containers, and images compatible for cloud platforms.

Software Developer – Relitix/FTC Mar 2023 – Dec 2023

- Developed endpoints for a Python Django API and JavaScript web app and deployed code through Microsoft Azure.
- Independently improved performance: refactoring efforts successfully increased stability and reduced backend response times, such as improved landing page loading time from 15s to 7s.
- Identified and resolved errors in an OAuth login flow for a robust error-free experience.
- Designed a back-end API for a generative AI personalized agent outreach feature for all users.

Software Developer – Inside Real Estate/FTC Aug 2021 – Jan 2023

- Implemented Lambda endpoints for the CORE Home API, each able to serve at least 1000 requests at once. Written in JavaScript to query and write data to various internal data sources using SQL and GraphQL.
- Prioritized work using Jira tickets and Agile sprints to successfully meet release deadlines.
- Verified that expected endpoint params and responses matched 100% to the actual implementations among shifting requirements. Created, maintained and deployed around 50 endpoints and their OpenAPI 3.0 specification to the AWS API Gateway.

Education

B.Sc. Major in Computer Science – UBC Graduated May 2020

- Computer Security – Cryptography, risks, vulnerabilities, designing secure systems
- Relational Databases – Database models, design and normalization, SQL
- Human-Computer Interaction – Principles of intuitive UI/UX, responsive user feedback
