

Skills:

Object Oriented Programming, Task automation, drafting technical documentation, Networking, Troubleshooting, Problem solving, Analytical skills.

Languages:

Python, Java, C#, C, SQL, HTML, CSS, JavaScript, Bash, XML.

Technologies:

Git, GitHub, Gitlab, PostgreSQL, REST API, Linux, AWS, Vue.js, Tailwind CSS, Docker containerization, .NET.

Certifications:

CISSP Associate (Certified Information Systems Security Professional)

CCSP Associate (Certified Cloud Security Professional)

CC Member (Certified in Cybersecurity)

WORK EXPERIENCE

Independent Contractor

Apr 2025 – present

Outlier AI

- Trained AIs to produce factually correct, functional, and coherent responses by lending technical knowledge in networking, computer science, mathematics, and physics.
- Upheld high standards for training data by identifying subpar entries, then rewriting and revising those entries to maintain quality training data.
- Prevented AI models from producing unwanted responses like hallucinations, excessive verbosity, and ignoring instructions by testing and validating the model in various circumstances. The model responses were then rated, ranked, and corrected to provide further training data.

Application Developer

Sep 2023 – Apr 2025

Community Legal Education Ontario (CLEO)

- Replaced time-consuming manual data entry and an expensive third-party French translation service by creating a Python script to automate the translation process using the DeepL API (AI Translation), resulting in weeks of reduced workload and thousands of dollars of savings per translated Document.
- Automated manual data mapping and editing tasks by creating Python tools to parse and manipulate the underlying XML and Json files. The tools removed the risk of human error and reduced the time required for certain tasks from days to minutes.

- Created the data pipeline for use with LLMs by writing Python scripts to generate XSLT (stylesheet transformation) files to automatically add context and convert XMLs into word documents that are more easily understood by LLMs, allowing research into the viability of using LLMs like ChatGPT to generate certain legal documents.

Python Developer Co-op

Sep 2021 – Aug 2022

Cognitive Systems

- Discovering code readability issues led to performing a major refactoring effort in the legacy Python codebase using tools like SonarQube to improve code quality and address tech debt.
- Maintained CI/CD testing pipelines by rewriting and debugging the tests, adding new testing pipelines, and expanding testing functionality to improve code coverage and ensure functionality continues throughout merging branches.
- Integrated additional hardware devices by using SSH to flash custom software into the device while resolving networking issues and working with the internal REST API to increase the number of devices compatible with the product.
- Improved the onboarding process for new hires by creating detailed documentation of internal tools and processes along with screenshots and guides resulting in the reduction onboarding times and confusion for new hires.

EDUCATION

University of Toronto, St. George Campus

Sep 2018 – May 2023

Honors Bachelor of Science, Computer Science and Mathematics

- Coursework in Artificial Intelligence (CSC384), Algorithm Design & Analysis (CSC373), Databases (CSC343), Data Structures & Analysis (CSC263), Software Design (CSC207)

INTERESTS

Music Production and Sound Design

At home, working with DAWs, VSTs, and a MIDI keyboard

- Samples of my work can be found on <https://soundcloud.com/fl47>
- Made songs inspired by the genres or artists I was listening to at the time.
