PROFESSIONAL EXPERIENCE

Airline Technology Company (Stealth Startup)

Toronto, ON, Canada

Senior Software Engineer

January 2020 - Present

- Designed and developed full-stack, cloud-native SaaS applications and microservices using C#/.NET, Vue, React, Razor, GraphQL, MongoDB, RabbitMQ, and Kafka, delivering core product functionality, customer-centric features, and end-to-end application workflows.
- Led feature architecture and design in collaboration with stakeholders and customers, including workflow orchestration, audit logging, monitoring, notifications, reporting, data streaming, state management, and data-feed integrations.
- Built automated reporting solutions using C#/.NET and MongoDB database, producing live CSV and XML outputs, and created proofs-of-concept for new product initiatives.
- Developed comprehensive automated test suites, including Cypress, Playwright, TestRail test cases, unit and integration tests for both frontend and backend components, Vue component tests, and performance testing for new features.
- Modernized and optimized CI/CD processes by building pipelines in Azure DevOps, Octopus Deploy, and GitHub Workflows; migrated legacy systems from TFS to Git; upgraded applications from .NET Framework to .NET Core; and transitioned deployments to Infrastructure-as-Code using AWS, Kubernetes, Docker, and ArgoCD.
- Improved platform reliability and cost efficiency by resolving logging bottlenecks and reducing AWS and Datadog operational costs.
- Partnered with cross-functional teams to refine existing features, address production issues, and design scalable solutions for evolving customer requirements.

Infostructure Technology Inc.

Brampton, ON, Canada

Software Developer

July 2017 - December 2019

- Designed and implemented front-end and back-end features across the childcare application, including financial management (payment tracking, credit/debit and direct deposit integration), reporting for parents and staff, administration, IT support, and program tracking customizable for each child.
- Developed and maintained secure data management processes, including backups, seamless rollbacks, and anonymization to ensure data privacy and compliance.
- Built responsive tablet and mobile applications, parent and drop-off/pick-up portals, and implemented mobile and SMS notifications for streamlined communication.
- Provided onboarding, training, and ongoing support for both customers and new team members to ensure smooth adoption and knowledge transfer.

Firmex

Toronto, ON, Canada

Software Developer

September 2016 - January 2017

- Created an in-house UI automated test suite, allowing to massively increase product quality and reliability.
- Integrated cross-domain services to support internal tools in making reproducible automated testing scenarios.

Flexmore Staffing

Brampton, ON, Canada

Software Developer

February 2016 - May 2016

- Developed multiple customer-facing ASP.NET applications, primarily focusing on backend optimizations.
- Revamped data management services by rewriting data-fetching processes, reducing request times by a factor of 20 and significantly improving application performance.

SKILLS

Languages & Frameworks: C#, .NET, TypeScript, JavaScript, Vue.js, React.js, Java, Kotlin, C/C++, HTML/CSS, ASP.NET

Tools & Platforms: Microsoft Azure, AWS, MongoDB, SQL, NoSQL, MySQL, Apache Kafka, Kubernetes, Datadog, GraphQL, RabbitMQ, Unity, Unreal Engine, Git, Node.js, Github, Cypress, Playwright, TFS, Testrail, Docker

Methodologies & Other: Agile, CI/CD, JIRA, Software Development, Web Development, SCRUM, Kanban

EDUCATION

Sheridan College

Associate's, Software Development and Network Engineering

September 2014 - December 2018
