

Jan Romeo Manaloto

Senior Software Engineer

Niagara Falls, Ontario

janmanaloto@gmail.com

Experienced Software Engineer with over 9 years of full-stack development in various technologies and fields such as e-commerce, fintech, and IoT. Specializing in front-end development with 7+ years ReactJS Developer

SKILLS

React, NodeJS, NestJS, Sveltekit, Kotlin, Java, Corda, PHP, MySQL, PostgreSQL, Redux, Redux Toolkit, React Native, GraphQL, Typescript, Expressjs, Spring, AWS, docker.

EXPERIENCE

Senior Software Engineer — Tooltwist

May 2021 - PRESENT

DistributionX: Utilized SvelteKit and NestJS (Node.js) to enhance the frontend and backend of the platform, focusing on electronic shelf labels and IoT devices.

Responsibilities:

- Led frontend development using React.js, ensuring seamless integration with backend services and the IoT tasks service.
- Integrated frontend, IoT service, and device management components, requiring coordination across disciplines to troubleshoot and support deliverables.
- Built the IoT tasks service to manage and monitor thousands of IoT devices simultaneously.
- Used Figma to enhance user experience (UX), focusing on intuitive design and accessibility.
- Improved developer experience and streamlined deployments by introducing Drizzle and tool-based database migrations.
- Created developer scripts to simulate thousands of devices for easier and more comprehensive testing.
- Managed QA, BA, and frontend/mobile development resources, ensuring effective coordination and high-quality deliverables.
- Performed code reviews and provided recommendations on architecture and design.
- Managed B2B ecommerce site using BigCommerce (PHP)

Milestones:

- Successfully deployed a scalable IoT solution that could handle large volumes of data and devices.
- Achieved improved user satisfaction through enhanced UX/UI design.

ToolTwist Test Case Management: Worked on an internal web application for handling test cases, focusing on improving efficiency and addressing architecture issues.

Responsibilities:

- Addressed and resolved efficiency and architecture issues, performed troubleshooting, and reviewed software design and architecture.
- Conducted code reviews, providing feedback on improvements and best practices.
- Fixed performance issues related to rendering large lists of React components, improving responsiveness and user experience.

Milestones:

- Enhanced the performance of rendering large lists of React components, leading to a more responsive and efficient user experience.
- Successfully introduced React.js best practices, patterns, tools, and libraries, which improved the application's maintainability and quality.
- Effectively guided team members and established development patterns, which streamlined workflows and improved code quality.
 -

Senior Software Engineer Team Lead — Grow Inc.

APRIL 2020 - MAY 2021

- Oversaw software development of one of seven feature teams for an Australian fintech client and wrote scalable code using Corda blockchain, Kotlin, Vue, PostgreSQL, and Nodejs.
- Lead team to become Highest Performing Feature Team for 2 consecutive company showcase events.
- Facilitated planning, demos, and other discussions.
- Create tasks from stories and epics and provide technical requirements, details, and estimates.
- Coordinated with Software Architect, consultants, and other feature team leads.
- Part of the team that delivered the platform's Insurance module using Corda blockchain as well as third party data integration and processing using Spring Integration.
- Guide associates across feature teams..
- Improved Developer Experience by introducing changes to dev setup (docker scripts etc.) and integration tests.

Fullstack Developer — Manaty

AUG 2017 - APRIL 2020

- developed React app for subscriptions and document signing for fnac+darty
- developed drag & drop document builder using LitElement
- worked on OpenCell features related to user generated entities
- developed user customizable layouts and configurable React components to act as JSON configurable widgets.
- created crawling and reporting tools for Webdrone (SaaS decision support solution that employs e-drones to detect and trace digital footprints)

Software Engineer — Tooltwist

JUNE 2015 - AUG 2017

Tooltwist Cloudmall (e-Commerce)

- Deployed changes and hotfixes to production
- Monitors and investigates production servers (ec2, rds, s3)
- Created generic and tenant agnostic features/widgets in ToolTwist (java, jQuery, bootstrap)
- Improved web page load times and security
- integrated payment gateways

- Created CLI scripts to help with deployments, backups, and report generation.

Frontend Intern — TORO

2014

Lead the grand release of an ecommerce tenant's site

- Deployed changes and hotfixes to production
- Monitors and investigates production servers (ec2, rds, s3)
- Created generic and tenant agnostic features/widgets in ToolTwist (java, jQuery, bootstrap)
- Improved web page load times and security
- integrated payment gateways
- Created CLI scripts to help with deployments, backups, and report generation.

EDUCATION

Holy Angel University — BS Computer Engineering

2010 - 2015

- Dean's List
- Best in thesis

PROJECTS

Builtview

A dedicated camera app to automate photo management for site teams while improving evidence for construction leaders.

(React, React Native, Redux, RTK Query, Electron, C#)

Grow Inc. (TINA)

Grow Super's (fintech startup for superannuation funds) blockchain enabled technology for superannuation funds and wealth platforms.

(Corda, kotlin, postgresSQL, Vue, nodejs, docker)

Opencell

Opencell is an agile monetization platform that makes it easy for businesses to quickly launch, grow and manage recurring revenue businesses.

(java, react, postgresql, docker)

Webdrone

Webdrone provides an operational analysis platform that automates online investigations across clear, deep and dark web.

(java, react, postgresql)

Tooltwist Cloudmall

an eCommerce system built from the ground up with a micro-services architecture. That means that it is constructed from dozens of individual pieces that can be pulled apart, and put back together in different configurations.

(java, nodejs, jQuery, mysql, redis, elasticsearch, bootstrap, docker)
