

Mounib Djellab

(514) 655-4198 djellabmounib@gmail.com

Montréal (QC)

Junior developer motivated to learn and grow through real-world projects. I enjoy working in teams, contributing to well-built solutions, and improving my skills alongside experienced developers.

Experiences

Full-stack Developer | *Montréal — Neuraya* | SEPT 2024 – DÉC 2024

- Designed a back-end oriented architecture separating client applications and server-side services (REST APIs, JSON).
- Developed and integrated RESTful services using NestJS, handling API communication and JSON data formats.
- Implemented server-side business logic with SQL-based data persistence and structured queries.
- Built secure back-end integrations using JWT authentication and service-to-service API communication.
- Integrated external services and platforms including Stripe APIs, webhooks, AWS S3, and Google Maps API

AWS Cloud Solutions Architect | *Montréal — Videotron* | SEPT 2023 - JUN 2024

- Analyzed existing infrastructure and system dependencies using AWS Migration Hub to support application integration planning.
- Designed a secure hybrid architecture integrating on-premises systems with AWS using Direct Connect for high-performance connectivity.
- Migrated server workloads and application environments from on-premises infrastructure to AWS EC2 using AWS Server Migration Service.
- Implemented security and compliance controls using AWS IAM, KMS, and Shield to protect data, services, and network access.

Automated Quality Assurance for Android | *Montréal — Videotron* | MAI 2022 - DEC 2022

- Designed and developed a Java application end-to-end, from architecture and UML (MVC) design to implementation and testing.
- Implemented Java-based application logic and user interface using Java and XML, following software quality standards.
- Applied Agile methodology for continuous effort estimation, sprint planning, and lifecycle management using Jira.
- Automated functional and UI testing in Java using Appium UiAutomator to ensure application reliability and quality.

Full-Stack Developer | *Polytechnique Montreal* | JAN 2022 - MAI 2022

- Developed a web application using Java Spring for the back-end and React for the front-end, exposing RESTful APIs.
- Implemented CI/CD pipelines on Azure Cloud using Jenkins, including YAML-based configuration management in GitHub.
- Containerized back-end and front-end applications using Docker to support automated build and deployment processes.

Full-Stack Developer | *Polytechnique Montreal* | SEPT 2021 - DEC 2021

- Designed and deployed a Node.js microservices architecture on AWS with REST-based client-server communication.
- Built CI/CD deployment pipelines using Jenkins and GitLab, deploying containerized services with Kubernetes.
- Developed REST integrations in JavaScript using Axios and JSON data handling for responsive user interfaces.
