Experience

Machine Learning Engineer Intern, RBC Borealis (Royal Bank of Canada)

May 2025 – Aug 2025

- Worked in a cross-functional team to design a secure AI LLM solution that simplifies PostgreSQL and MariaDB database access, queries, and updates using Python, GitHub Actions, a CI/CD pipeline, MCPs and RESTful APIs.
- Developed an AI meeting note-taking web service using Python, Kubernetes, React and TypeScript that scheduled meetings, captured discussion details, and gave summaries.
- Coordinated meetings to identify issues, propose fixes, conduct knowledge transfer sessions, and present demos to both technical and non-technical audiences, ensuring deadlines were met.
- Developed an MCP to enable LLMs to create charts and diagrams from datasets and descriptions.
- Developed a configurable load-testing system to monitor performance and find bottlenecks early under high user loads using Python and Locust and AWS S3 Buckets to store results.

Software Developer Intern, RBC Borealis (Royal Bank of Canada)

Sep 2024 – Apr 2025

- Developed an Enterprise Format Preserving Encryption system for moving data to the cloud using Java Springboot and Python.
- Spearheaded getting services to production using Kubernetes, Docker and Git and a CI/CD pipeline while also providing extensive documentation and directions from senior developers.
- Collaborated with senior engineers in a cross-functional team to develop services for secure data movement using Kafka, MariaDB and Flyaway
- Developed data protection RESTful APIs and libraries for identifying and encrypting personally identifiable information of RBC clients, while preserving data usability for AI model training, synthetic data generation and analytics.

Education

Bachelor's Degree in Digital Media - York University

Sep 2021 – Present (Expected Spring 2026)

Diploma in Computer Programming - Sheridan College

Jan 2020 – Jun 2021

Projects

Technical Lead, "Insomnia"

- Led a team to create a First-Person game in Unity C# with time manipulation mechanics and presented it to industry professionals.
- Oversaw project goals, fostered an environment for giving and receiving criticism, directed technical implementation, ensured cohesive integration of gameplay features, and mechanics

Marvel Snap GO

- Developed a web app featuring a spawning system that generates random cards on a map with the Google Maps API
- Implemented real-world coordinate placement, spawning cards near the user for collection and inventory tracking.
- Added user authentication using OAuth to support persistent accounts and saved progress.

Model Kit Catalogue

- Built a full-stack web app showcasing a model kit catalogue with product pages, embedded videos, and retailer links, including Google OAuth login and saved items stored in MongoDB.
- Implemented a REST backend using Node.js, Express, and MongoDB, hosted on AWS EC2 with CI/CD pipelines.
- Integrated external APIs, including YouTube Data API and Java-based data ingestion tools.
