SUMMARY

Java Backend Developer with 6+ years of experience in Agile (Scrum) teams, specializing **microservices**, and **API design**. Proven ability to design and deliver scalable, high-performance products using cloud-native technologies.

- Strong foundation in Object-Oriented Design, Data Structures, and Algorithms.
- Skilled in breaking down complex, ambiguous problems into practical solutions.
- Extensive experience in Microservice and Webservice development with Cloud Native API design.
- Proficient in Java Spring Boot, working with both SQL and NoSQL databases.
- Expertise in leveraging AWS native technologies to build scalable, resilient services.
- Delivered high-quality, production-ready code with automated testing from proof of concept (POC) to final deployment.
- Hands-on experience with continuous integration (CI) tools like Jenkins.
- Exposure to Machine Learning and Data Science principles and tools.

SKILLS

Languages: Java , Scala , Python , C / C++ , SQL , NoSQL

Other Technologies: Advance Java , Spring Boot , Maven , AWS , Linux , Object Oriented System Design , High Level System Design , API Design , Low Level Design , Microservices Architecture , Cloud Developemnt , REST , Cloud Foundry , Shell Scripting , RabbitMQ , Docker Containers , Git / Github , Machine Learning , Data Science , Postman , jMeter , jConsole , Jenkins , Amazon Q (LLM) .

WORK EXPERIENCE

Amazon – Software Development Engineer 2 (SDE 2)

November 2021 to Present

Amazon Payment Products

- Led a team of 3 junior Software Development Engineers (SDEs) to solve complex technical challenges, delivering multiple solution approaches and decision matrices for optimal results.
- Spearheaded the development of key features for a Japanese payment method, driving significant enhancements to the payment system which impacts 8M customers.
- Successfully led the PrimeDay 2023 event for Japanese payment methods, coordinating efforts across 3 teams and managing 7 payment methods, achieving zero downtime and no customer impact.
- Presented an automation idea at Amazon DevCon 2023 for Amazon Payments' Fraud Detection service, reducing manual processing time from hours to minutes and significantly improving operational efficiency.
- Designed and implemented innovative solutions by working with 10+ different teams with a focus on reducing technical debt, meeting critical program delivery timelines.
- Improved visibility of the payment product offers in Japan by surfacing it on product detail page.
- Led Operational excellence for 3 teams managing 7 Payment Methods to reduce operational load while maintaining high customer experience bar.
- Created a customized Amazon Q LLM model on team's codebase to work improve code and unit test suggestions based on team's coding style.
- *Technologies : Java, Spring Boot, API Design, AWS, NoSQL, Scala, CI/CD, Git/Github, Jenkins, REST.*

SAP Labs – Developer

July 2018 to November 2021

SAP Health Engineering

- Evaluated the performance and scalability of SAP Health Patient Accounting microservices, delivering an improved user experience during the Beta rollout.
- Improved the scalability and performance of services through app profiling and instrumentation in Java Spring Boot.
- *Technologies : Java , Spring Boot , Maven , Cloud Foundry , HANA , SQL , Postman , jMeter , jConsole , Git / Github , Jenkins , REST and System Design , SAP Enterprise Messaging (EMS) .*

Mobile SDK Team (SAPML Framework) - SAP Cloud Platform Mobile Services

- Developed and implemented a production-ready feature to auto-update machine learning models using TDD, improving the reliability of the App.
- Built an image recognition pipeline with automatic model retraining, ensuring continuous model updates without user intervention.
- Delivered a CodeTalk on SAP's YouTube channel to demonstrate text recognition features using SAPML.
- *Technologies : Swift , GCP , Git / Github , TDD (Test Driven Development) , REST , API Design .*

RabbitMQ As a Service Team - SAP Cloud Platform Core

- Ensured high availability of RabbitMQ as a service, optimizing HAProxy to minimize downtime.
- *Technologies : RabbitMQ , Shell Scripting , Cloud Foundry , Docker .*

Flipkart – Data Science Intern

July 2017 to August 2017

Size Fit Recommendation

- Devised a preliminary clustering algorithm to predict garment returns due to size/fit issues, using data extraction and analysis from Hive queries.
- *Technologies : Python , matplotlib , numpy , scikit-learn , Machine Learning / Data Science .*

EDUCATION

Indian Institute of Technology (IIT) Kharagpur (July 2016 to June 2018)

Master of Technology in Computer Science and Engineering (GPA – 9.18 / 10)

Gujarat Technological University (August 2010 to June 2014)

Bachelor of Engineering in Computer Engineering (GPA – 8.02 / 10)

PUBLICATION

[ASONAM - 2018] One size does not fit all: Predicting product returns in e-commerce

Developed a machine learning model to predict product returns based on size/fit issues, enhancing return prediction accuracy in e-commerce.
