Objective

Offering a strong background in computer science and a willingness to learn, I bring foundational understanding of coding principles and software development processes, along with solid hands-on experience in Java and Spring boot.

Education

Father Conceicao Rodrigues College of Engineering, Mumbai

Aug 2019 – June 2023

B.E, Computer Engineering

GPA: 9.19/10.0

Technical Skills

- **Languages and Databases:** Java, JavaScript, TypeScript, C, MySQL, Python
- **Frameworks:** Spring Boot, AngularJS, NextJS, ReactJS, Node
- **Developer Tools:** AWS, Git, GitLab, Postman, Splunk, Jira, Confluence
- **Concepts and Methodologies:** Object-Oriented Programming (OOP), Test-Driven Development (TDD), Code Debugging, Web Scraping, Agile
- **Communication:** French, Leadership, Teamwork

Work Experience

TIAA Global Capabilities (TIAA-GBS)

July 2023 - Nov 2025

Software Developer Analyst — Spring BOOT, Gradle, AngularJS, FreeMarker Templates

Mumbai, India

Software developer Responsible for end-to-end software development, including design, testing, deployment, and maintenance of code; troubleshooting and resolving bugs; implementing new functionalities; collaborating with business analysts; and building features from scratch.

- Worked within an Agile Scrum framework to deliver iterative, high-quality software solutions
- Maintained regular communication with business analysts to clarify and finalize functional requirements for new features
- Took end-to-end ownership of features, from functionality planning and technical leadership through development, collaboration with database teams, testing, and deployment
- Upgrading existing projects to newer technologies

TIAA Global Capabilities (TIAA-GBS)

April 2022 - June 2022

Spring BOOT, Gradle, AngularJS, Jenkins

Mumbai, India

- **Technology Intern** The project consisted of automating the process of extracting a docker image in a deployment environment and triggering a jenkins build while displaying relevant information on a dashboard with a 100% success rate of automation

Projects

Document and Skill Verification — Next JS, Polygon, IPFS

April 2022 - May 2023

- We made a system that verifies identity documents, certifications and authenticates the skills claimed by the candidate. This potentially eliminates the workload in a hiring process.
- In this research, the system proposes to use the Polygon platform to overcome issues with Ethereum technology.

Flood Severity Detection — Deep learning, Convolutional Neural Networks.

April 2021 - May 2022

- We built a dataset with flood images of mild, moderate and heavy classifications and tested different machine learning models using the same dataset to analyse efficiency and accuracy.

Networking Platform for NGOs and Volunteers — JavaScript, AJAX, Java servlets, JSP, MySQL

April 2020 - May 2021

- Implemented an online platform where NGOs and volunteers can easily connect and collaborate. Both parties can choose whom they approach based on requirements and location.
