Skills

- **Programming Languages:** Java, Python, C, JavaScript, TypeScript
- **Frameworks & Tools:** Spring Boot, Spring AI, Hibernate, Hasura, Flyway, JUnit5, Mockito, JSoup, Lombok, RabbitMQ, GCP Pub/Sub, Swagger / OpenAPI, TensorFlow, OpenCV
- **Databases:** PostgreSQL, MySQL, Oracle DB, MongoDB
- **DevOps & Cloud:** Docker, Kubernetes, AWS EC2, GCP, Git, GitLab CI/CD, Maven, Gradle, Jira, Shell Scripting

Work Experience

Software Engineer

2023 – Present

Engel & Völkers Technology, Hamburg, Germany

- Developed a Spring Boot microservice that uses JSoup to parse HTML emails, extract structured lead data, and forward it to the central CRM system via REST API.
- Integrated Google Pub/Sub to pull emails from the internal mailbox and stream them to the lead ingestion microservice for processing.
- Developed a dedicated application functioning as end-to-end test suite covering the entire lead ingestion pipeline, from pulling emails from the mailbox, publishing them to Google Pub/Sub, to HTML parsing and CRM integration, ensuring system reliability across all stages.
- Integrated Spring AI into the property management platform to analyze property images for multiple use cases, including automatic description generation, and semantic tagging.
- Implemented image quality assessment using OpenCV to compute benchmarks such as resolution, brightness, and sharpness, ensuring only high-quality property images were used in the listings.
- Designed and implemented a customer-to-customer relationship module to support linked accounts and group ownership.
- Designed and implemented a contact tagging system within the CRM, enabling users to categorize and filter contacts based on custom labels.
- Refactored a monolithic command-based architecture by replacing the single-entry endpoint with modular REST controllers with dedicated DTOs and MapStruct-based mappers.
- Actively resolved production incidents by identifying root causes and delivering timely hotfixes to restore system functionality.
- Served as Release Manager, coordinating deployments and ensuring timely, error-free releases across all environments.

Software Engineer (Dual Study)

2021 – 2023

DPS Engineering, Hamburg, Germany

- Maintained and refactored a legacy enterprise financial system built with Java and Apache Tapestry, resolved critical bugs and improved codebase structure.
- Developed a Spring-based web application to autonomously monitor internal servers and databases, and raise alerts on performance issues or service downtime.
- Developed an application to execute a comprehensive suite of automated test cases across multiple banking platforms, replacing manual ATM server validation.

Projects

Bachelor's Thesis: 'Enhancing Real Estate Brochures with AI-Powered Image Processing' in collaboration with Engel & Völkers Technology

Designed and implemented an AI-driven system to enhance real estate brochures by automatically analyzing, classifying, and improving property images. Focused on visual quality enhancement, semantic labeling, and aesthetic evaluation to support real estate marketing, built with Java 23, Spring Boot, Spring AI, PostgreSQL, Python, and OpenCV

aWOWsome Wedding

Developed an application using a microservices architecture where users can order wedding favors, built with Java 22, Spring, MySQL, and RabbitMQ.

Education

B.Sc. in Information Engineering

2019 – 2023

Hamburg University of Applied Sciences, Germany

Cumulative Germany GPA: 1.2, Canadian Equivalent GPA: 4.0
