Objective:

Bachelor of Software Engineering graduate seeking a full-time software role to apply hands-on expertise in cybersecurity, software development, and agile practices. Committed to delivering secure, user-centered solutions and continually expanding technical capabilities. Open to relocation.

Skills & Abilities:

Programming Languages: C, Python, Java, JavaScript, Bash, SQL, HTML/CSS, Assembly, Rust

Tools & Software: Git, GitHub, MATLAB, Excel, Word, Fusion 360, SolidWorks, Blender, Ultimaker Cura, Godot Engine, Wireshark, MongoDB, AWS (EC2, Route 53), ZAP (Zed Attack Proxy)

Frameworks & Libraries: FastAPI, Django, React, React Native, Expo, Node.js

Networking & Systems Experience: Configuring HTTP/S, Understanding of TCP/IP and UDP Protocols, Basic Server Setup and Monitoring using AWS and Wireshark

Cybersecurity: Threat Modeling and Risk Assessment (STRAs), Vulnerability Management, Social Engineering Awareness, Familiarity with Common Web Vulnerabilities (e.g., SQL injection, XSS)

Design & Methodologies: UML Diagrams, Low- and Medium-Fidelity Prototyping, Agile Development

AI: Stable Diffusion, Large Language Models

Communication & Problem Solving: Cross-functional collaboration · Technical presentations · Hardware troubleshooting (e.g., 3D-printer upgrades)

Work Experience:

Co-op Security Analyst

Ministry of Citizens' Services *September 2024 – April 2025*

- Conducted vulnerability management and Security Threat and Risk Assessments (STRAs) to identify and remediate risks across systems and applications
- Delivered security awareness presentations to technical and non-technical audiences, elevating organizational security posture
- Adapted communication style and technical language to suit diverse audiences, improving cross-functional collaboration and stakeholder engagement

Mobile Application Software Developer

CRL Group Holdings *May 2024 – August 2024*

- Independently built a cross-platform React Native app with Expo and a Node.js/MongoDB backend
- Addressed platform-specific challenges, such as integrating native calendar and clock functionalities across iOS and Android
- Collaborated with stakeholders through iterative feedback loops, enhancing usability and adoption

Software Summer Camp Instructor

Byte Camp *June 2023 - August 2023*

- Taught groups of 8–12 students in topics such as 2D/3D game development using Godot, 3D animation with Blender, and introductory programming in Scratch
- Designed and delivered engaging, age-appropriate lessons that simplified complex technical concepts into accessible, hands-on activities
- Fostered a collaborative and inclusive learning environment, encouraging creativity, problem-solving, and peer-to-peer support

Education:

University of Victoria

Bachelor of Software Engineering · September 2019 – August 2025

Interests /Hobbies:

Embedded Systems & Programming: Collaborated on a small team project to build a traffic light simulation using LEDs and a breadboard; enjoy experimenting with microcontrollers and hardware logic

Electronics Repair & Modification: Regularly repair, enhance, and modify handheld devices and consumer electronics, combining troubleshooting with creative problem-solving

3D Printing & CAD Design: Design functional parts in SolidWorks and fabricate them using FDM 3D printing, emphasizing simplicity, practicality, and real-world usability
