Software engineer with 6+ years developing scalable systems with strong communication, problem solving, and leadership skills.

EXPERIENCE

GMO-Z.COM Fintech CA, Vancouver (formerly Cardinal Chain Software Inc.)

Software Engineer — MAY 2019 - SEPT 2025

- **Full-lifecycle development** of our **back-end Java Spring Boot** trading server.
- Developed **multi-threaded** processes impacting **a million accounts daily**, ensuring **exactly-once execution** across multiple servers through **SQL-based distributed locks**.
- Maintained **RESTful APIs** for crypto and forex ordering serving **100,000+ accounts per server**.
- Indexed **MySQL** queries, improving speed **100x**. Sped up initial cache load **2.5x** via batch loading and in-memory filtering. Used **query hints** to set max execution time. Used **SQL transactions** to persist multi-table updates of financial data.
- Developed **JUnit** integration tests for **RabbitMQ message-driven architecture**; debugged and fixed message dropping across critical distributed services, improving **system reliability**; and enhanced logging for **system observability**.
- Improved **caching** of frequently calculated data. Developed a **broadcastable REST API** to manage caches across all servers with a single request.
- Refactored inheritance-heavy code into **modular, composition-based** designs, **boosting testability** and **maintainability**.
- Generated **6,000+ unit tests** for an untested legacy system, rapidly achieving **95%+ code coverage** using **Cursor** and the **Gemini LLM**, and identifying long overlooked bugs.
- **Led a team** to write system-wide **technical documentation**, improving knowledge sharing in our company. Developed **end-user API tutorials**, including sample CURL workflows, to streamline customer onboarding.

STAR Informatics, Burnaby

Software Engineer — MAY 2018 - MAY 2019

- Built **microservices** with **Python** and **Flask** to wrap third-party bio-medical APIs, standardizing heterogeneous data sources under a unified **RESTful API**.
- Developed a **data pipeline application**, using Java to query and aggregate distributed scientific datasets into a **Neo4j graph database**.

EDUCATION

Simon Fraser University, Burnaby

BSc. Software Systems — SEPT 2012 - APRIL 2018

Dear Hiring Manager,

I'm looking for a position where I can consult with clients and make a measurable impact for their business needs.

In my previous roles I participated in the full software development lifecycle: gathering and documenting requirements, implementing and testing features, refactoring, debugging, and documenting software systems.

Because of my attention to detail and organization, I was put in charge of a team to write documentation and automated tests for critical legacy systems. I set tight deadlines to ensure continuous progress, and frequently reviewed their work to ensure quality. I made sure the team could depend on me, always making myself available when they had questions or needed help.

I'm excited for this opportunity to bring my skills to the Cyber Sun Consulting team.

Warm regards,

Lance Hannestad
