

Prakher Singh

Java Full Stack Developer

SK, Canada | +1 306-510-3850 | prakher116@gmail.com | LinkedIn | prakhersingh.net

SUMMARY:

Skilled Java Full Stack Developer with 3+ years of experience building robust, scalable web applications in telecom and technology consulting environments. Expertise in designing backend services using Java, Spring Boot, and developing responsive user interfaces with React. Proficient in developing RESTful APIs, containerizing applications with Docker, and deploying cloud-native solutions on AWS. Strong team collaborator with a focus on clean architecture, performance optimization, and Agile SDLC methodologies.

SKILLS:

Languages: Java, JavaScript, Python

Frameworks: Spring Boot, Flask, Angular, React, Node.js

DevOps & Cloud: Docker, AWS (Lambda, Glue, S3, SageMaker), Azure DevOps, GitHub Actions, Apache Airflow

Web & API Development: REST APIs, JSON, Postman, MVC, JWT Auth

Frontend: React, Bootstrap, AJAX, Responsive Design

Backend & Microservices: Java (Spring Boot), Flask (Python), SQLAlchemy, Docker

Databases: PostgreSQL, MySQL, MongoDB, Snowflake, AWS Redshift

Tools: Git, JIRA, Jenkins, IntelliJ, VS Code, Jupyter

EXPERIENCE:

Rogers Communications, SK, Canada

Jul 2023 – Present

Java Full Stack Developer

- Designed and implemented scalable web applications for telecom service monitoring, supporting 100,000+ concurrent users, using a Java (Spring Boot) backend and Angular frontend, improving system responsiveness by 25%.
- Developed and maintained robust RESTful APIs integrating real-time data streams from internal telecom systems, enabling predictive analytics that improved service quality insights and reduced downtime by 15%.
- Built and deployed Dockerized microservices for diagnostic and internal support tools, cutting system latency by 30% and boosting reliability across CRM platforms.
- Engineered backend services using AWS Lambda and Spring Boot to efficiently retrieve and process large volumes of call logs and user activity data, supporting near real-time analytics and reporting.
- Implemented automated CI/CD pipelines with AWS CodePipeline, enabling zero-downtime deployments with automated rollback, error handling, and full testing coverage.
- Collaborated with infrastructure and QA teams in a DevOps environment to enhance microservice scalability and maintain 99.9% system uptime, strengthening overall production stability.

Bohr Solutions, Canada

Jun 2022 – Jun 2023

Full Stack Developer/Software Engineer

- Developed and deployed full stack modules using **Spring Boot** and **React** to power internal analytics and reporting tools used by business consultants, improving data accessibility and decision-making speed.
- Designed and maintained secure **REST APIs** for features including role-based access control, user authentication, and real-time event notifications, resulting in a 25% reduction in support tickets related to user access issues.
- Built backend services using **Flask** and **SQLAlchemy**, optimizing database interactions and reducing query execution time by 40% for key reporting operations.
- Integrated external APIs (CRM, payment gateways) and developed scheduled background jobs for syncing data across platforms, increasing data freshness and accuracy across systems.
- Refactored legacy backend codebase using **controller-service-repository** design pattern, improving maintainability and enabling 2x faster onboarding of new developers.
- Actively participated in Agile ceremonies, including sprint planning, code reviews, and retrospectives, contributing to consistent on-time delivery of sprints and a 15% increase in team velocity.

EDUCATION:

Saskatchewan Polytechnic– Regina, SK, Canada

Jun-2023

Degree in Computer Systems Technology
