

Seyed Mohammad Hassanzadeh Amin

Senior Full-Stack Software Developer

 smhassanzade@gmail.com

 1-437-477-7727

 Toronto, ON

Professional Summary

Senior Full-Stack Developer with over six years of experience designing and building scalable, high-performance web applications using modern JavaScript ecosystems. Strong focus on system design, performance optimization, observability, accessibility, and CI/CD automation, delivering measurable improvements in reliability and operational efficiency. Experienced in collaborating across engineering, design, and operations teams to build maintainable internal systems aligned with business needs. Holds a **Bachelor's degree** and brings a disciplined, detail-oriented approach to on-site development environments.

Technical skills

Frontend: React 19, Next.js, TypeScript, JavaScript, Redux, Valtio, Tailwind CSS, Material UI, Bootstrap, HTML5, CSS3, Responsive & Accessible Design (WCAG, ARIA)

Backend: Node.js, Express, REST API, Microservices, Performance Optimization, Caching Strategies

Databases: PostgreSQL, MongoDB, Redis / Caching, Indexing & Query Optimization

Authentication: OAuth 2.0, JWT,

Testing: Jest, React Testing Library, Cypress, Playwright,

Cloud & DevOps: AWS, Docker, Kubernetes, Ansible, Jenkins, CI/CD Pipelines, GitHub Actions

Monitoring & Observability: Open Telemetry, Prometheus, Grafana, Logging & Metrics, Performance Monitoring

Generative AI & Productivity Tools: GitHub Copilot, ChatGPT, AI-assisted Development

Professional Experience

Full-Stack Developer

Unique Silk Technology Company | Oct 2018 – Oct 2024

- Built and maintained full-stack applications using React, Node.js, and PostgreSQL for internal and customer-facing systems.
- Designed modular services and optimized database performance through indexing and query tuning, improving response times by 40%.
- Implemented real-time features using WebSockets and Redis to support high-concurrency user interactions.

- Applied structured testing practices with Jest and React Testing Library to improve release stability and reduce regressions.
- Deployed and maintained containerized applications using Docker and Kubernetes to ensure consistent environments across development stages.
- Contributed to collaborative development workflows through code reviews, Agile ceremonies, and continuous process improvements.

E-Commerce Admin Dashboard (E2E Full-Stack)

Stack: ReactJS, Node.js, PostgreSQL, Tailwind CSS, JWT, OAuth 2.0, Docker, Kubernetes

- Designed and delivered a **modular admin platform** centralizing product, category, inventory, and user-role management, **reducing operational overhead by 25%** and enabling staff to manage thousands of SKUs efficiently.
- Built a **scalable data layer** with caching, optimistic updates, and real-time validation, **cutting workflow latency by 35%**.
- Implemented an **accessibility-first UI** passing WCAG/ARIA audits, ensuring consistent usability across devices.
- Introduced **automated testing and CI/CD pipelines**, accelerating release cycles by 30% and improving deployment reliability.
- Refined operational workflows with designers and backend engineers, ensuring the dashboard mapped accurately to business processes.

Real-Time Multi-Channel Chat System (Backend + Frontend + Realtime)

Stack: ReactJS, Node.js, Socket.IO, Redis, JWT, PostgreSQL

- Delivered a **distributed chat system** with live messaging, presence tracking, unread counters, and synchronized room states, supporting **1,000+ concurrent users**.
 - Implemented **horizontal scaling** via Redis pub/sub, eliminating bottlenecks during peak traffic and improving throughput by 40%.
 - Enhanced **UX with sub-second interactions**, optimistic UI patterns, and robust reconnection strategies.
 - Defined interaction models and fallback behaviors with product and UX teams, **improving reliability under high load by 30%**.
 - Conducted **load and chaos testing**, ensuring system stability under high throughput and unpredictable network conditions.
-

Distributed Monitoring & Observability Platform

Stack: Node.js, OpenTelemetry, Prometheus, Grafana, Docker, REST API

- Architected a **multi-service observability platform**, unifying traces, metrics, and logs across internal microservices, enabling **end-to-end request visibility**.
- Reduced **debugging and root-cause analysis time by 50%** through distributed tracing and latency bottleneck identification.
- Built **custom dashboards and alerting rules**, allowing engineering teams to detect outages and regressions before impacting users.
- Contributed to **observability best practices** and mentored teammates on instrumentation and performance analysis.
- Containerized, deployed, and tuned the monitoring stack for **high reliability and minimal operational overhead**.

Education

Bachelor of Software Engineering | Imam Reza International University

September 2013 – February 2018
