

Soo Yun Kim

Software Engineer

Software engineer with 5 years of experience in building scalable and user-centric solutions, particularly in manufacturing IT systems such as MES, CRM, and WMS. Skilled in C#, .NET, Java, MSSQL, and AWS, with a proven ability to reduce downtime, optimize system performance, and improve cross-functional workflows. Passionate about solving real-world problems through practical, collaborative, and continuously evolving development.

WORK EXPERIENCE

Software Engineer May 2024 – June 2025

LG CNS Canada, Windsor, ON

- Maintained and enhanced MES solutions built with **C# and .NET**, improving production workflow efficiency and increasing manufacturing throughput.
- Performed rapid root-cause analysis by reviewing **ERDs**, querying **MSSQL**, and debugging C# code, frequently applying corrective actions on the production floor within **5 minutes**.
- Ensured stable and continuous MES operations by analyzing enterprise architecture and integrating MES with upstream/downstream systems via **.NET-based interfaces**.
- Identified bottlenecks in manufacturing data using **MSSQL** and proposed process improvements that reduced downtime and increased operational stability.
- Took over WMS operations on short notice and achieved **two months of zero downtime** through quick learning, proactive monitoring, and effective troubleshooting.

Software Engineer September 2022 – February 2024

Navien, Seoul, South Korea

- Developed and maintained a web-based **CRM** system for orders, customer info, and warranty management using **C#, ASP.NET, JavaScript, HTML, CSS, VBScript, JSON, MSSQL, and AWS (CloudFront, EC2, S3, Route 53)**.
- Built and operated a **Java/JSP-based delivery management system (Spring MVC, MSSQL)**, enabling real-time delivery tracking. Increased adoption from **30% to 90%** through UI enhancements, performance tuning, and user engagement.
- Eliminated daily downtime issues caused by WMS DB overload by redesigning the data flow and implementing **MSSQL stored procedures** to batch-insert SAP data into local tables, significantly improving system performance.
- Reduced licensing costs by **20 million KRW** annually by identifying inactive users and automating deactivation via **Oracle SQL** queries in the groupware system.
- Contributed to **S&OP (Sales & Operations Planning) system development**, including UI creation and MSSQL data modeling, enabling more accurate planning and data visibility.
- Led **ERP(SAP)-CRM interface integration**, performing large-scale MSSQL data analysis to support cross-department needs and operational efficiency improvements.
- Managed full development life cycle (requirements → UI design → development → deployment → maintenance) for multiple enterprise systems used company-wide.

Software Developer June 2020 – September 2022

GL, Daegu, South Korea

- Developed cognitive training and assessment software using **C#, WPF, and .NET** for clinical and training environments.
- Designed personalized cognitive assessment workflows and managed user data with **MariaDB**.
- Improved application stability and user experience through data-driven feature enhancements and feedback-based UI refinement.

SKILLS & TECHNOLOGIES

- **Languages:** C#, Java, JavaScript, JSP, HTML/CSS, VBScript, C++, Python, SQL
- **Frameworks:** ASP .NET, .NET, Spring, WPF, WinForms
- **Data Formats:** XML, JSON
- **Databases:** MSSQL, Oracle, MariaDB
- **Cloud:** AWS (CloudFront, EC2, S3, Route 53)
- **Tools:** Git, SVN, Jira, Visual Studio, Eclipse
- **Systems:** MES, CRM, S&OP, Groupware, WMS

EDUCATION

- **University of Washington Bothell - Bachelor**
Major in Computer Science & Software Engineering
- **Shoreline Community College - Associate**
Major in Computer Science
