

GARRY SELF

8-245 Francis Way, New Westminster BC | 604-727-4509 | garryself@gmail.com

PROFILE

- **Software development leadership** with decades of experience spanning Android mobile development, data lake architecture, large scale system migrations and AI integrations.
 - Adept at quickly ramping-up in new and unfamiliar technical domains, bringing teams up to speed efficiently.
 - Skilled in leading local and remote teams, managing clients, and optimizing workflows.
-

SKILLS

Platforms: Mobile (Android/some iOS), Mac OS, Windows, Linux, AWS, Azure, Data Lakes

Languages & Frameworks: Kotlin, Java, Flutter, Jetpack Compose, C#, C++, C, Spring Boot

Databases: MS T-SQL, Oracle, Vertica, MongoDB, Postgres, SQLite

Tools: IntelliJ, Android Studio, Visual Studio Code, Xcode, JIRA, Github, Gerrit, Jenkins, Docker, MS Copilot, Amazon Q Developer

EXPERIENCE

TEAM LEAD | IMPROVING, VANCOUVER BC | 2022-2025

Lead teams to deliver high quality bespoke software solutions for the clients of Improving, a *remote-first* modern digital services company.

- **Integrated Microsoft Copilot** into the development environment of a payment processing system, measurably increasing productivity by removing time spent on boilerplate code, refactoring and environment configuration, promoting high quality prompting rather than “vibe coding”. Created a reusable knowledge base for training and onboarding.
- **Built a proof of concept of a payment transaction system** based on micro services to replace a legacy T-SQL based system. Improved scalability and reduced transaction times under heavy load from seconds to milliseconds.
- **Developed custom Java data connectors** for an AWS, Azure and on-premises data lake platform, enabling customers to see a unified view of their data sources into a single view without a full migration to a common database.
- **Migrated a proprietary file-based data processing system to a modern, reliable, high performing platform**, building, custom C++ extensions and delivering a full, working, high performing implementation.
- **Implemented growth frameworks, conducted yearly performance appraisals and weekly 1:1 sessions**, supporting the development of all team contributors.

Technology: Java, C++, Docker Compose, AWS, Azure, Microservices, Databases, Microsoft Copilot, Amazon Q

STAFF MOBILE ENGINEER | REALTOR.COM, RICHMOND BC | 2012-2022

Developed the leading real estate search application for Android in the United States, combining hands-on technical development with leadership of feature teams, collaborating with stakeholders throughout the organization.

- **Ran Agile ceremonies** across a team distributed throughout North America and off shore, working closely with Product and Design leadership to ensure work was correctly sized, documented and ready for development.
- **Recruited, onboarded and managed** staff and contractors based locally, remote and offshore.
- **Built Android mobile property search applications** in Java, Kotlin and Flutter, with a strong focus on quality, testability and maintainability, using metrics and A/B testing to fine tune the best user experience. With iOS team support, ported features to and from each platform.

Technology: Android, Java, Kotlin, Flutter, GraphQL, Espresso, Jira, Github, Jenkins, Firebase.

SENIOR SOFTWARE ENGINEER | TOP PRODUCER, RICHMOND BC | 2006-2012

Built full stack subscription products for real estate agents, enabling their clients to receive customized comparable market analysis reports.

- **Built a "Market Snapshot" web application** for delivery to the clients of real estate agents, containing market information such as recently sold and for sale properties of interest that are relevant to the client.
- **Created an optimized property search engine** to adjust the client's search parameters to produce the best and most relevant results in the Market Snapshot.

Technology: C#, .NET, SQL Server, Transact-SQL

EDUCATION

NORTHUMBRIA UNIVERSITY, NEWCASTLE UPON TYNE, UK

Higher National Diploma, Computer Studies (two years full time study)
