
NADER NABOULSI

Calgary, AB T3H 3R0 ♦ 587-966-9839 ♦ nadernaboulsi04@gmail.com

PROFESSIONAL SUMMARY

Motivated Software Engineering student with experience supporting the design, integration, and maintenance of computer-based systems across the software development lifecycle. Strong foundation in backend development, system integration, and collaborative problem-solving, with hands-on experience working in structured, fast-paced technical environments. Comfortable working with modern programming languages, system architectures, and development tools while continuously learning and adapting to new technologies.

SKILLS

- **Systems & Integration:** System integration, API-based integration, MVC architecture, software lifecycle management, system reliability and performance evaluation

Programming Languages: Java, Python, SQL

Platforms & Tools: Linux, Windows, Eclipse, cloud-aware deployment environments

Databases: Relational databases, schema design, performance optimization

RELEVANT EXPERIENCE

Capstone Project ,HealthSYNC (Systems Integration), 09/2025 - Current

University of Calgary, Calgary, Alberta – Calgary, AB

- Collected and documented functional and non-functional user requirements in collaboration with stakeholders.
- Designed and integrated a multi-service system using MVC principles to support reliable data flow and application stability.
- Supported issue investigation, debugging, and resolution during development and testing phases to improve system reliability.
- Planned and executed end-to-end system integration across frontend, backend, and database components.
- Implemented backend services using Java and Python with structured SQL-based data storage.
- Prepared documentation and maintenance plans to support long-term system stability and operational continuity.
- Coordinated development tasks within a team environment, ensuring timely delivery in a fast-paced setting.

MacroMeter — Nutrition & Calorie Tracking System , 01/2024 - 04/2024

University of Calgary, Calgary, Alberta – Calgary, AB

- Designed and integrated a computer-based system to analyze meal images and track nutritional metrics, including calorie and macronutrient intake.

- Collected and documented user requirements to support accurate data ingestion, processing, and visualization.
- Implemented backend services in Python with structured SQL-based data storage to ensure system reliability and maintainability.
- Integrated frontend and backend components using an MVC-style architecture to optimize system modularity and scalability.
- Evaluated system performance and data accuracy across different usage scenarios and iterated on design improvements.
- Planned software maintenance and upgrade strategies to support future feature expansion and evolving user needs.

CI/CD & Software Integration Project, 09/2023 - 01/2024

University of Calgary, Calgary, Alberta – Calgary, AB

- Designed and integrated automated build, test, and deployment pipelines to support reliable software delivery.
- Evaluated system reliability by identifying integration risks and implementing validation checks across environments.
- Maintained and upgraded software components to ensure compatibility across development and production systems.
- Documented integration workflows and technical decisions to support maintainability and knowledge transfer.

EDUCATION

Engineering : Software Engineering, Expected in 06/2026

University of Calgary - Calgary, AB

ADDITIONAL QUALIFICATIONS

- Strong written and verbal communication skills for technical documentation and stakeholder coordination.
- Proven ability to work under pressure, manage tight deadlines, and maintain accuracy in repetitive tasks.
- Client-focused mindset with sound judgment, organization, and initiative.
- Effective team player with experience coordinating and supporting information systems professionals.
