## EDUCATION

---

### DALHOUSIE UNIVERSITY

Sep 2024 – May 2026 | Canada

- Master of Engineering in Internetworking, CGPA – 3.5/4
- Coursework: OSI Layer Model – Core Networking, Network Security, Container Orchestration, Wireshark captures.

### AMRITA VISHWA VIDYAPEETHAM

Jun 2017 – May 2021 | India

Bachelor of Technology in Electronics and Communication Engineering, CGPA - 3.45/4

## EXPERIENCE

---

### YARA DIGITAL FARMING INDIA, Associate DevOps Engineer

Aug 2021 – Jul 2024 |

India

- Strong working experience with deploying, configuring, and setting up the application stack with microservice architecture on Kubernetes using Helm charts and rollback to previous version if something went wrong.
- Created Terraform Module for creating K8s application alerts from Instana. Created monitoring dashboards in Instana.
- Engaged in EKS upgrade activities consistently for all environments - using github actions automation.
- Spearheaded AWS infrastructure provisioning using Terraform, managing RDS, S3, Lambda, and IAM roles across 3 environments (staging, pre-prod, prod), supporting over 20 microservices.
- Configured and executed DMS tasks to ensure efficient data delivery for the Data Engineering team.
- Deployed an application within the EKS cluster and reduced manual intervention by 60% with a CI/CD pipeline.
- Unblock developers with k8s related issues.
- Responsible for version control Management, Branching, Performing the GIT Merging activities.
- Assumed pivotal role of leading project presentations and demos.

## TECHNICAL SKILLS

---

- Languages: Python, C, C++, Shell Scripting, JavaScript.
- Tech Stack: AWS, GitHub Actions, CircleCI, Argo CD, Docker, Git, Kubernetes, ECS, Terraform, Instana, ELK stack, Atlantis.
- Other: Microservice Architecture, Linux.

## PROJECTS

---

### FLASK APP CI/CD ON AWS | AUTOMATED DEPLOYMENT WITH GITHUB ACTIONS AND DOCKER

- Developed a CI/CD pipeline using GitHub Actions, reducing manual deployment time by 30 minutes/release, enabling automated testing, and increasing deployment frequency to 8+ releases/month.
- Used Docker for consistent multi-stage deployments across environments and deployed securely to AWS EC2 within a VPC, improving uptime by 15% and reducing environment drift by 35%.

### NODE.JS APP CI/CD ON AMAZON EKS | SCALABLE KUBERNETES DEPLOYMENT

- Engineered a CI/CD pipeline for Node.js apps on AWS EKS, increasing deployment frequency by 25%, reducing manual intervention by 90%, and supporting 15+ microservices.
- Automated Docker image builds and pushes to AWS ECR, integrating Kubernetes manifests via GitHub Actions, achieving 99% deployment consistency across environments.

### Voice Enabled Donation-Box

- Donation-Box: A Donation Box capacitated with the ability to speak in six different languages. It detects people present in its range of operation and requests them to donate money for the needy. Tools Used: python code, raspberry pie.
- **Voice Enabled Donation-Box: published in 2019 8th International Conference System Modeling and Advancement in Research Trends (SMART) - [link](#)**
