

AMINATA KEITA

keamysh@gmail.com | 403-633-3784 | <http://www.linkedin.com/in/amy-keita> | Calgary, AB

PROFILE SUMMARY

Bilingual DevOps Engineer and senior Data Analyst with 6+ years of experience delivering end-to-end Business Intelligence and data analytics solutions and 4+ years of hands-on DevOps, cloud infrastructure, and automation engineering. Proven ability to design, build, and operate complete BI platforms (data ingestion, ETL, analytics, dashboards) while also engineering fully automated CI/CD pipelines and cloud-native infrastructure using Docker, Kubernetes, Ansible, Terraform, Jenkins, and GitHub Actions. Strong background across banking, financial services, automotive retail, education technology, and enterprise environments. Fluent in English and French.

TECHNICAL SKILLS

DevOps | Azure | AWS | GitHub | Bash | Kubernetes (EKS/AKS) | Terraform | Helm | Ansible (IaC) | Docker | Jenkins | GitHub Actions | GitLab CI | Prometheus | Grafana | CloudWatch | PagerDuty | Linux | Python | Power BI | Tableau | Snowflake | SSRS | SSIS | SSAS | SQL Server | DAX | MDX | Azure Synapse | Databricks (PySpark) | Qlik Sense |

CERTIFICATIONS

Microsoft Certified: Azure Solutions Architect Expert (**AZ-305**)

Microsoft Certified: Azure Administrator Associate (**AZ-104**)

Microsoft Certified: Data Analyst Associate (**PL-300**)

Microsoft Certified: Azure Data Fundamentals (**DP-900**)

PROFESSIONAL EXPERIENCE

RELEVANT EXPERIENCE

DevOps Engineer (Contract), Acada Learning

Dec 2023- Now

Acada Learning is an EdTech company that provides hands-on, industry-focused training in DevOps and Cloud. The company partners with businesses to build a skilled tech workforce and improve operational efficiencies through digital transformation.

Project: Migration from Spreadsheets to Structured Data Warehouse

Business Domain: Education Technology / Learner Analytics

Business Impact: Eliminated manual spreadsheet workflows, improved data consistency and refresh times by 60–70%, reduced operational and reporting risk by 50%, and enabled more reliable analytics and personalization initiatives for learners.

Key Achievements & Responsibilities:

- Spearheaded full-cycle migration from manual spreadsheets to a cloud-based data warehouse, automating CI/CD pipelines and improving learner analytics delivery speed by 70%, while reducing reporting errors by 50% across 5+ departments.
- Designed star-schema models for 4 core learner domains and standardized 20+ KPIs, improving reporting consistency across analytics and personalization teams.
- Implemented version control for ADF pipeline JSON, SSIS configurations, SQL DDL/DML scripts, and documentation using Git and GitHub.
- Built CI/CD pipelines with Jenkins and GitHub Actions to deploy ADF, SSIS, and SQL artifacts across DEV/TEST/PROD, reducing deployment time by 60% and enabling gated approvals.
- Implemented automated data validation checks for schema integrity and row counts, reducing pipeline failures by 40% and improving SLA compliance.

- Produced operational documentation, including pipeline workflows, runbooks, and a centralized data dictionary to support onboarding and long-term maintainability.

Environment: Azure | Azure Data Factory (ADF) | SSIS | Azure SQL Database / Data Warehouse | Git | GitHub | Jenkins | GitHub Actions | CI/CD | Linux

Cloud DevOps Engineer (Contract), Oxdit Technologies

Oct 2021- Dec 2023

Oxdit Technologies is an IT services company based in Calgary, offering digital transformation services in cloud migration, DevOps implementation, and custom software development

Project: AWS to Azure Lift-and-Shift & DevOps Modernization

Business Domain: Ecommerce / Cloud Infrastructure & DevOps Modernization

Business Impact: Led full migration of ecommerce workloads from AWS to Azure and modernized DevOps pipelines, improving deployment automation, operational reliability, and cloud resource efficiency.

Key Achievements & Responsibilities:

- Engineered the migration of 100+ ecommerce workloads from AWS EC2 to Azure VM Scale Sets using Terraform and Ansible, automating provisioning and reducing manual setup by 80%.
- Transferred AWS data warehouse to Azure Synapse, implementing automated ETL pipelines with Bash and Terraform-managed data services.
- Containerized 3 legacy ecommerce platforms with Docker and built CI/CD pipelines that cut deployment setup time by 65% and improved release consistency.
- Enabled automated rollbacks and improved deployment reliability by 40% through GitHub Actions integration with Azure Container Registry.
- Deployed Prometheus + Grafana monitoring stack via Terraform/Ansible, creating dashboards for latency, reliability, and resource utilization.
- Developed automated cross-cloud rollback workflows with Terraform state and Ansible, cutting recovery time for failed deployments by 75%.

Environment: AWS | Azure | Terraform | Ansible | Docker | GitHub Actions | Jenkins | Azure Synapse | Bash | Prometheus | Grafana | Azure DevOps

Senior Data Analyst Consultant, Canadian Western Bank

April 2022- Oct 2025

Canadian Western Bank (CWB) is a Canadian financial institution focused on business banking, with specialized services in commercial lending, real estate financing, and wealth management across Western Canada.

Project: Counterparty Data Deduplication & Centralized Reporting Pipeline

Business Domain: Banking, Credit Risk, Regulatory Reporting, Enterprise Data Quality, Cloud Migration

Business Impact:

Improved regulatory reporting accuracy, eliminated duplicate counterparty records across banking systems, strengthened credit-risk visibility, and reduced manual reconciliation workload for Finance, Risk, and Compliance teams.

Key Achievements & Responsibilities:

- Built an enterprise Counterparty Deduplication Pipeline using SQL Server, SSIS, SAS DI, ADF, and Azure Databricks to unify and cleanse counterparty datasets across multiple legacy systems.
- Designed business-rule matching logic (LEI, tax IDs, timestamps, system-of-record hierarchy), improving entity-matching accuracy and data quality by 35%.
- Used PySpark in Databricks for distributed profiling, fuzzy matching, timestamp versioning, and large-scale reconciliation tasks.
- Integrated Azure Databricks with National Bank's AWS-based Snowflake and S3 environments, increasing Azure → AWS migration readiness by 60% during the CWB → NBC acquisition.

- Performed cloud-migration impact assessments across ETL pipelines, lineage, metadata and downstream dependencies.
 - Built SAS DI jobs for cleansing, exception handling, and automated regulatory data validation.
 - Authored Source-to-Target Mappings, transformation rules, and validation logic using SQL, SAS, DAX, and MDX.
 - Developed SSAS cubes and SSRS reports supporting credit-risk analytics, exposure hierarchy analysis, and compliance reporting.
 - Delivered Power BI and Tableau dashboards providing near-real-time visibility into exposure and counterparty relationships.
 - Implemented CI/CD pipelines with GitHub and Azure DevOps; supported multi-cloud governance
- Environment:** SQL Server, SSIS, SAS DI, ADF, Databricks, PySpark, Synapse, SSRS, Power BI, Tableau, Snowflake, AWS, Azure DevOps

BI Analyst / ETL Developer, PBS Systems

Calgary, Canada

Sept 2021 – Apr 2022

PBS Systems is a leading provider of dealership management software and technology solutions across North America, delivering advanced analytics, finance, and sales tools to the automotive retail industry.

Project: Dealership Sales Performance Metrics (SPM) Pipeline

Business Domain: Automotive Retail, Sales Analytics, Financial Reporting

Business Impact: Standardized dealership KPIs across North America, improved reporting consistency for executives, and reduced manual reporting effort through automated ETL and well-structured data models.

Key Achievements & Responsibilities:

- Built KPI pipelines integrating sales, inventory, and finance data across 100+ dealerships, enabling consistent performance tracking and executive reporting.
- Designed fact/dimension models with SCD 0/1/2 logic to support historical tracking.
- Developed ETL workflows in SQL Server and SSIS, including incremental loads, partitioning, and validation checks that helped stabilize refresh cycles and reduced manual corrections by 15%.
- Documented Source-to-Target mappings Created and optimized stored procedures, functions, views, and indexing strategies to improve performance for analytics queries
- Built dashboards in Power BI, Qlik Sense, and Tableau for dealer benchmarking and trend analysis.
- Supported data governance: lineage, KPI documentation, and access control.

Environment: SQL Server, SSIS, Qlik Sense, Power BI, Tableau, Excel, Dimensional Modeling (Star/Snowflake, SCD 0/1/2), T-SQL, Agile/Scrum

Business Implementation Analyst, Morgan Stanley

July 2020 – Sept 2021

Global investment bank and financial services firm provide institutional securities, wealth management, and investment management services.

Project: Reporting & data Migration support for wealth Management Analytics

Business Domain: Wealth Management, Operations Reporting, Data Migration

Business Impact: Reduced Power BI dashboard errors by 20% during migration.

Key Achievements & Responsibilities:

- Rebuilt Power BI dashboards affected by schema and data changes.
- Supported the migration of reporting assets by rebuilding and validating Power BI dashboards, helping reduce dashboard-related data issues by 20% during the transition.
- Updated DAX measures, relationships and data models in Power BI to align with the new database structure.

- Developed SQL scripts and ETL jobs feeding 15+ Power BI dashboards, improving data accuracy and reducing refresh errors by 20%.
 - Troubleshoot SSIS/SQL Server jobs and resolved reconciliation issues.
 - Documented logic changes, data rules, and dashboard updates for operational teams taking over support.
- Environment:** Power BI, SQL Server, SSIS, SSRS, DAX, Excel, Data Validation & Reconciliation, Agile/Scrum

Data Analyst, JBS Food - Canada

June 2019 – July 2020

Global food processing company

- Worked with product, operations, and finance teams to analyze data related to new product development and the performance of existing product lines.
- Acted as the link between business and technical teams, helping both sides understand data definitions, reporting expectations, and project priorities.
- Designed and built Power BI dashboards and reports to track product performance, production trends, and operational KPIs—improving reporting visibility and reducing manual data preparation by 15%.
- Assisted management with weekly and monthly reporting by preparing datasets, validating numbers, and clarifying data logic for key decision-makers.
- Helped coordinate sprint planning and daily stand-ups, using Agile practices to keep tasks organized and ensure work stayed aligned with business timelines.

Data Analyst/ Administrator, Avisecure

Nov 2016 – Apr 2019

Technology solutions provider specializing in security systems and data-driven services.

Project: Operational Performance & Customer Engagement Reporting Initiative

Business Domain: Security Services, Operations Reporting, Customer Insights

Business Impact: Improved visibility into departmental performance, strengthened customer retention strategies through better reporting, and reduced manual effort by establishing clearer KPIs, standardized data practices, and consistent monthly reporting.

Key Achievements & Responsibilities:

- Analyzed operational and customer-related data to support decisions around service quality, client engagement, and product awareness.
- Worked closely with internal teams and clients to gather reporting needs, conduct interviews, and document business requirements.
- Documented changes in business requirements and communicated updates clearly to both technical and non-technical teams.
- Helped establish and monitor departmental KPIs and productivity metrics, improving transparency and supporting a 10% improvement in workflow consistency.
- Produced monthly performance reports that helped managers track progress against targets and make resourcing decisions for multiple ongoing initiatives.

Environment: MS SQL Server, Visual Studio, Microsoft Excel

• **EDUCATION**

Bachelor's degree in Computer Science

University of Technology
