FULL STACK ENGINEER

Architecting Innovative Software Solutions with Strategic Leadership

Full-stack Senior Software Developer with 8+ years of experience delivering scalable web and cloud solutions using Vue.js, Express.js, Python, and .NET Core. Recognized for identifying optimal frameworks and technologies, such as early Docker adoption and modern performance testing tools, to driving high-impact projects, including a demo securing a multi-million-euro contract. Excel in mentoring teams and delivering innovative solutions, such as using Gen AI to enable natural language policies for role-based authentication.

Core Competencies:

Full-Stack Development | Cloud Infrastructure (GCP / AWS)
API Development | Encryption | Agile Methodologies | DevOps

PROFESSIONAL EXPERIENCE

THALES (Canada), Ottawa

Senior Software Developer

2022 - 2025

- Crafted a Gen AI-powered solution for role-based authentication, enabling natural language policies instead of code, showcasing innovation in simplifying complex systems.
- Strengthened Euroclear sales demo by identifying functional gaps and an impractical feature, delivering key fixes and recommending its removal due to timeline constraints, ensuring timely completion of the project.
- Automated build process for a Keycloak-based authentication system, enhancing maintainability by separating open-source and custom components.
- Spearheaded a team of engineers to create Single Page Applications and API's that showcased secure authentication features, using Vue.js / Express.js / flask / OpenID Connect, SAML, securing a multi-million-euro Airbus contract.
- Diagnosed deficiencies in the encryption strategy during a BYOK / HYOK POC (key encryption), suggesting and designing a cloud-agnostic solution aligned with best practices, validated across AWS and Google Cloud, shaping product architecture for multiple product lines.
- Orchestrated the ZeroTrust dashboard by architecting GCP infrastructure and BigQuery analytics, using event-driven architecture and serverless technologies, ensuring accurate and real-time data presentation.
- Delivered Web3 Wallet Authentication POC by identifying a more efficient integration path, using core software instead of a derivative solution, accelerating delivery and significantly reducing development time.
- Mentored teams in agile practices and technical implementations, refining delivery efficiency and predictability.

GEMALTO, Ottawa

Software Developer

2020 - 2022

- Replaced an outdated performance testing solution with Locust.io, demoing capabilities to architects and establishing as the department-wide standard, streamlining testing efficiency and team productivity.
- Built scalable APIs with Express.js / Node.js and responsive AngularJS front-ends for an enterprise security platform.
- Improved system reliability by diagnosing and resolving complex customer issues across large-scale microservice architectures, including Elastic DB, SQL / NoSQL databases, message queues, and Windows services.
- Developed a .NET Core RESTful API with 100% test coverage and comprehensive documentation, enhancing system reliability, client satisfaction, and developer efficiency.
- Designed API for user provisioning, using System for Cross-domain Identity Management (SCIM), enabling Azure AD sync (2021).

ADDITIONAL EXPERIENCE

GEMALTO, Ottawa, ON

Junior Software Developer

2017 - 2020

- Implemented a secure Kong API gateway with, enabling API key access for secure authentication and to enhance enterprise client integration.
- Pioneered Docker Compose for Kong API project as an early Docker adopter, accelerating developer onboarding and boosting team productivity.
- Enhanced ASP.NET / MS SQL Server applications.
- Migrated product to the cloud via Jenkins / Ansible / Kubernetes / AWS, improving system scalability.

CLEARPICTURE, Ottawa, ON

Software Developer

2015 - 2017

- Built ASP.NET / MS SQL Server applications, implemented automating testing (selenium), lowering quality assurance errors.

EDUCATION

Diploma, Computer Systems Engineering, Algonquin College, Ottawa, ON, Canada, 2015

Bachelor's Degree in Physics (BSc), University of Guelph, Guelph, ON, Canada, 2011

TECHNICAL SKILLS

Languages	Python, C#, Typescript, JavaScript, bash, PowerShell, Lua, Java
Front-End	Vue.js, AngularJS, Single Page Applications
Back-End & Cloud	Express.js, Google Cloud (Serverless, BigQuery, Event Driven Architecture), AWS, Flask, Entity Framework, .NET Core, Asp .Net
DevOps & Tools	GitLab CI, Jenkins, Ansible, Kubernetes, Docker, Locust.io, CI/CD
Databases	MongoDB, PostgreSQL, MS SQL Server, Elastic, BigQuery, Firestore
APIs & Security	RESTful APIs, SCIM, OpenID Connect, SAML, Encryption, Key Management, API Gateways (Kong)
Methodologies	Agile, Scrum, Kanban, SAFe, Test-Driven Development
