SUMMARY

Backend Software Developer with 5+ years of experience designing, integrating, and supporting secure, high-availability enterprise and cloud-based systems. Proven background at IBM Canada delivering scalable backend services using Java, Python, REST APIs, SQL, Docker, and Kubernetes within Agile environments. Strong experience with system integration, troubleshooting production issues, and collaborating across technical and non-technical stakeholders. Demonstrated ability to improve reliability, automate workflows, and support operational requirements in regulated environments. Actively expanding skills in areas aligned with system operations, documentation, and cross-team coordination. Secret-level Government of Canada security clearance in progress.

TECHNICAL SKILLS

- **Languages & Frameworks:** Java, Python, J2EE, Spring Framework, Spring Boot, Hibernate, Hibernate Annotations, REST APIs, JPA, JMS, Python, SQL, Groovy, C/C++, JavaScript (Node.js), Swift, PHP
- **Cloud & DevOps:** Amazon Web Services (AWS, EC2, S3), Docker, Kubernetes, Jenkins, GitLab CI/CD, Terraform, IBM Cloud Pak, JFrog Artifactory, Firebase, VMware, Travis CI
- **Messaging & Streaming:** Apache Kafka, ActiveMQ
- **Web Technologies:** HTML5, CSS3, JavaScript, jQuery, AJAX
- **Databases:** PostgreSQL, MySQL
- **Testing Tools:** Selenium, JUnit, Mockito, TestNG, Spock, XCTest, Cypress
- **Development Tools:** Git, GitHub, Jira, Artifactory, Maven, Gradle, Eclipse, IntelliJ IDEA, Android Studio, VMware, WinSCP, PuTTY, Boxter, Xcode, Arduino IDE
- **Architectural Patterns:** Microservices, MVC, MVVM
- **Other:** MATLAB, CAD, Embedded Systems, RF Communication

WORK EXPERIENCE

IBM – Ottawa, ON

Software Developer, DLC Cloud

Aug 2020 – PRESENT

- Advanced from Junior to **Advisory level in under four years**, driven by consistent delivery of high-impact features and leadership in high-visibility technical program
- Integrated Ubuntu OS support into DLC, expanding beyond RHEL and driving **20% increase in deployments across 50+ enterprise clients**
- Integrated **30+ enterprise protocols** to improve cross-platform interoperability, strengthen security, and enable seamless large-scale deployments across environments such as **Amazon Web Services (AWS), Microsoft Azure, Okta, and Apache Kafka**)
- **Reduced DLC registration setup time by 80%**, significantly improving client operational efficiency with secure TLS/UDP encryption
- Led migration from Java 8 to Java 11, **improving system performance by 30%**, fixing critical security vulnerabilities, and enabling modern framework compatibility
- Maintained **90%+ test coverage** across major modules and remediated security vulnerabilities flagged by SonarQube, strengthening code quality and compliance

- **Mentored 3 junior engineers** and created an internal best practices wiki, reducing onboarding time by 30% and promoting agile development standards across the team
- Deployed and orchestrated applications using Docker and Kubernetes in VMware environments
- Engineered and fine-tuned PostgreSQL databases for large-scale, data-intensive workloads, achieving significant performance gains in query execution and data management
- Leveraged DevOps tools including Jenkins for CI/CD, JFrog Artifactory for artifact management, Git for version control, and Jira for agile project tracking, supporting efficient and reliable software delivery

Software Developer Co-op, QRadar Pipeline

Jan 2018 – Aug 2018, Jan 2020 – Jul 2020

- Delivered backend and UI features for **QRadar SIEM used by 1700+ clients** to streamline threat detection and incident response
- Diagnosed and resolved critical defects using CI/CD pipelines and SQL debugging, accelerating release cycles and improving deployment reliability

General Dynamics – Ottawa, ON

Testing Engineer Co-op

May 2016 – Dec 2016

- Developed cross-functional test cases that improved defect detection rates and reduced release delays during multiteam feature rollouts
- Delivered weekly QA reports that highlighted 10+ key risk areas, directly informing leadership decisions and reducing test cycle ambiguity

APPLIED PROJECTS

iOS Tracking Application

Jan 2025

- Developed a fitness tracking app with SwiftUI and Firebase, enabling real-time health monitoring and cross-device synchronization
- Applied MVVM architecture and XCTest UI automation to ensure maintainable structure and robust test coverage across core features

Unmanned Geomagnetic Survey Aircraft

Sept 2019

- Developed and integrated flight instrumentation systems, including barometric pressure sensors, thermocouples, and accelerometers, to monitor aircraft performance with an Arduino Nano
- Utilized a Raspberry Pi with Navio2 autopilot for real-time data collection, advancing research in unmanned aerial vehicles (UAVs)

EDUCATION

CARLETON UNIVERSITY – Ottawa, ON

Bachelor of Engineering, Electrical

Sept 2014 – Dec 2019
