Professional Summary

DevOps Engineer and Automation Specialist with 5+ years of experience designing, deploying, and securing cloud infrastructure and automation systems. Strong background in GCP, PowerShell, Linux administration, and CI/CD pipelines, with recent focus on AI-driven automation and internal tooling development. Proven ability to operate independently, build production-ready systems end-to-end, and improve reliability, efficiency, and scalability. Seeking remote roles in DevOps, Platform Engineering, or Systems Administration.

Technical Skills

DevOps & Cloud: GCP (Google Professional Cloud Architect Certified), AWS, CI/CD: GitHub Actions, Jenkins, Terraform, Docker

Scripting & Automation: PowerShell (5+ years), Bash, Batch, TacticalRMM, Remote Monitoring & Management (RMM) tools, Workflow automation and system provisioning

AI & Automation: AI-assisted automation workflows, Prompt engineering for operational and scripting tasks, Internal AI tooling and process optimization

Databases: MySQL, Postgress

Networking & Security: VoIP solutions, Linux & Windows Server Administration, Cloud Security Best PracticesSoftware

Development: JavaScript, Node.js, C#, PHP

Zoho & Business Automation: Zoho CRM, Deluge scripting, API integrations

Professional Experience

KrisKoreNet | Automation Specialist | February 2020 - Present

- Designed and maintained cloud-based infrastructure supporting internal platforms, automation systems, and hosted services.
- Built AI-assisted automation workflows to accelerate scripting, system configuration, and operational troubleshooting.
- Developed PowerShell and Bash automation to reduce manual IT effort and improve system consistency.
- Deployed and managed Linux and Windows servers for business applications and internal tooling.

-
- Implemented Zoho CRM automations using Deluge scripting and APIs to streamline operational workflows.
 - Provided consulting and implementation support for VoIP, networking, and security solutions.
 - Researched and evaluated emerging AI tools to enhance DevOps workflows and operational efficiency.

Rappid Software Design Inc. | DevOps Engineer | October 2021 - April 2023

- Improved app stability and security for a major client by implementing CI/CD pipelines.
- Managed GCP environments, monitoring infrastructure and automating deployments.
- Developed automation scripts to streamline system administration.
- Directly engaged with clients to troubleshoot and support enterprise applications.

Total E Works | Bench Technician | November 2018 - October 2019

- Developed PowerShell scripts to automate computer repair and remote management.
- Provided technical support in-person and remotely across Windows & Linux platforms.
- Diagnosed and repaired hardware/software issues for customers.

Notable Projects

Cloud & Web Deployments – Managed and deployed cloud-based solutions for:

- kriskore.net
- annexadmin.ca
- planforyourprofit.com

Crypto & Decentralized Storage – Hosted 11 crypto mining rigs at peak and managed Storj decentralized cloud storage nodes.

AI & Prompt Optimization – Researched and refined AI prompting techniques to improve output quality and efficiency in automation workflows.

CERTIFICATION

Google Professional Cloud Architect Certificate
