Software Engineer

Accomplished Software Engineer with extensive experience in the video game industry. Apply expertise in software development and best practices in project management to create and implement innovative solutions. Highly effective communication and collaboration skills contribute to exceeding goals.

Key Skills

Software Development Life Cycle | Process Improvement | User Experience | Project Management | Testing | Quality Assurance | Leadership | Problem Solving | Automation | Risk Management

Technical Skills

C | C++ | Rust | Python | Kotlin | TCP/IP | Wireshark | IDA Pro | Ghidra | WinDbg

Highlights and Achievements

- Analyzed and improved documentation and the team's understanding of a complex older software system that had no clear owner.
- Designed and implemented a Python library to build an automated tool that combats fraud in Electronic Arts' FIFA franchise.
- Wrote a robust script to assist in complying with GDPR FIFA player data requests.
- Made programming assignments and led QA in lessons to learn Python.
- Developed scripts and programs to increase efficiency in Electronic Arts team members' tasks.

Work Experience

Electronic Arts

January 2020 – June 2025

C++ Software Engineer

- Worked in a wide range of areas on EA Desktop, the successor to EA Origin.
- Made a log file analyzer that passively scans for failed SSH login attempts and creates new iptables rules to block further login attempts from that IP address.

Test at EA Games

June 2017 – May 2019

Software Development Engineer

- Worked with QA to verify quality of game security features and controls.
- Resolved customer disputes regarding account security incidents.
- Got involved in every step of the software development cycle to support quality and user experience.
