

Maharaj Teertha Deb

(514) 708-7879 | maharaj.deb@mail.concordia.ca | teerthadeb.github.io/Portfolio | [in/maharaj-teertha-deb](https://www.linkedin.com/in/maharaj-teertha-deb) | [G/TeerthaDeb](https://github.com/TeerthaDeb)

TECHNICAL SKILLS

- **Languages** : Python(Flask, Django), JavaScript, C++, Java.
- **Web & Cloud** : HTML, CSS, Javascript, NodeJs, TypeScript, React, NextJS, Socket.io, PostgreSQL, NoSQL, FastAPI, AWS(S3, Karpenter) GCP.
- **DevOps & Tools** : Git/Github, Docker with k8s, WSL (for windows), Postman, Sentry, ECS, n8n.
- **AI/ML frameworks** : Pytorch, Tensorflow, Scikit-Learn, OpenCV, Orion, Mediapipe, Pymupdf, HuggingFace, Ollama, LiveKit.

EXPERIENCE

AI Software Developer | Neo Carbone

Sep 2025 – Dec 2025 (contract) | Remote

- Orchestrated the migration of the StyleSeekr production database (serving 15,000+ active users) to a scalable PostgreSQL architecture. Automated the user transition workflow by scripting bulk invitation emails to ensure seamless onboarding.
- Audited client applications for security flaws, focusing on database breaches and permission escalation issues for PolicyNow platform
- Fine-tuned ElevenLabs audio models to generate context-aware questions for senior citizens. Built an alerting pipeline that emails caregivers or family members immediately when health risks are detected in the responses.
- Developed and fine-tuned a semantic AI search engine for StyleSeekr platform, enabling users to discover creatives and artwork using natural language queries instead of rigid keyword matching.

Software Developer | Zetane Systems Inc.

Dec 2024 – Aug 2025 | Hybrid in Montreal, QC

- Reduced incident triage time by integrating Sentry and GitHub APIs, enabling automatic issue generation and deduplication for critical production errors.
- Tuned inference parameters and retrieval settings to improve LLM tool selection accuracy by 23%, fixing errors where the model would call the wrong tools in edge case.
- Developed an AI-powered interactive dashboard tool that lets analysts query data using natural language. This added feature increased analyst productivity and cut report generation time by 25%.

Software Developer (Intern) | Zetane Systems Inc.

Aug 2024 – Dec 2024 | Remote

- Developed a [NPM Package](#) for cloud-based users, enabling direct integration of Zetaforge pipelines into web applications with seamless S3 file upload and download capabilities, enabled **600+ developers** to run zetaforge pipelines on cloud.
- Built a Golang [platform Katana](#) to run pipelines in **3 different modes**: (uv, local-dependency and docker), which is **50% faster** on average and it provides more trackable and detailed logs for errors and warnings for each node in the pipeline.

EDUCATION

Concordia University

Montreal, QC, Canada

Bachelor of Computer Science (BCompSc)

December, 2025

- **Volunteer** : Organized **ConUHacks 8 and 9, the largest hackathon in Quebec**, welcoming 800+ participants and 30+ sponsors.
- **Academic Projects** : [4 computer vision models\(Naïve Bayes, Decision Tree, MLP and CNN\)](#) and [comparison against Scikit-Learn built in Models](#) (Colab), [IdioMaster-interactive Learning website](#)(group project, MERN), [Generate Million Users\(C\)](#), [File encryption](#)(Clojure).
- **Relevant Courses** : UI/UX Design, Web Programming, Operating Systems, Data Structures & Algorithms, object-oriented programming (OOP), Machine Learning, Pattern Recognition, Artificial Intelligence, Statistical Programming with R.

PROJECTS

Local LLM Based RAG App – Privacy-First RAG tool you can run locally.

Developed a RAG application that uses Ollama model(mistral:7b) to answer questions from uploaded documents with page reference. As the LLM is in your computer only, Zero risk for privacy. Enabled Nvidia's Cuda Core accelerations to answer and vectorize the documents.

- **Use Cases**: Searching answers from large files. References are needed while preparing documents.
- **Technologies used**: React, FastAPI, Python, Langchain, pytorch, ollama, mistral:7b, docker, pymupdf, sentence-transformer.

AI Kanban Board – Create issues from text or excel files.

An AI application that allows users to create and manage tasks from Excel files, meeting notes, or natural language input. Implemented real-time collaboration with Socket.IO, AI-assisted task extraction using LLaMA 3.2, and multi format files processing.

- **Use Cases**: Taking meeting notes from large meetings, conversations or even large excel files.
- **Technologies used**: TypeScript, FastAPI, Python, ollama, LLaMA 3.2, docker, socket.io.
