(778)-669-55-77

SUMMARY

I have over 15 years of experience in software engineering and management of large projects, including designing and developing platforms, frameworks and applications with proven ability to lead big teams and departments. My areas of expertise include Application Design and Architecture, Clouds, Data Platforms and Data Analytics, Algorithms, Artificial Intelligence (AI) and Machine Learning (ML), NLP, Augmented Reality and Computer Vision.

EXPERIENCE

Cancap Management Group (remote)

Engineering Lead/Director of Engineering - AI, ML, Cloud, Big Data

Toronto, ON

Nov 2023 - Present

Projects: Software Platforms for FinTech to perform loans origination, management, assets repossession, etc.

- Lead organization's R&D department across multiple products establishing technical standards and engineering guidelines and architectural strategy through full software development life cycle (SDLC)
- Define products strategy roadmaps, work in collaboration with CPO/CTO and their teams to convert business requirements into technical strategies
- Architect and lead development projects, using cloud native architecture, robust CICD, observability with proper logging, monitoring and tech support
- Mentor and grow up engineering team capabilities

Solace (contract position, remote)

Senior Software Architect - Cloud, AI, Big Data

Ottawa, ON

Nov 2022 - Nov 2023

Projects: Software Platform Framework (we called it Connector Framework) allowing to create new applications (connectors) providing integration between Solace PubSub+ Broker and different third party data sources.

- Led architecture and development of a platform for creating series of connectors between different data sources. Framework was released as open-source solution and now is the part of [Spring Cloud Framework](#).
- Introduced a new line of products (10 connectors in 6 months), resulted in a significant increase in company revenue and profit.

Google (through acquisition of Phiar Technologies)

Staff Software Engineer - Cloud, AI/ML, Augmented Reality (AR)

Mountain View, CA

June 2020 - Nov 2022

Project: New platform for Android Auto ecosystem, focusing on real-time spatial recognition and augmented reality (AR) to enhance driving experiences and road safety with projecting AR information for driver.

- Led architecture, development and integration of new cloud platform for Android Auto ecosystem.
- Released new AR product for Geo, which later became a Live View in Google Maps (Walking Mode).

IBM

Staff Software Engineer/Technical Lead - Cloud, ML, Trends, Anomalies Detection

Ottawa, ON

May 2018 - June 2020

Project: New Machine Learning Platform started from scratch to perform Big Data analysis as part of the Watson Analytics Insights.

- Directed the design and development of a new analytical platform, available as SaaS for customers.
- Stayed behind conceptualization and development of the core framework, designed to be a robust platform for AI integration with various cloud services.

Cisco (12 months, contract position)

Senior Software Engineer - Cloud Applications, Networking

Ottawa, ON

April 2017 - May 2018

Project: New Cloud Platform allowing to perform remote networking configuration of any Cisco's hardware through the browser by creating new Virtual Networking Functions (VNFs).

- Developed a framework to dynamically spin up and configure virtual network devices and services to reduced time to onboard new customers.
- Designed micro services using Java and Spring to enable on-demand creation of virtual network functions.

Genius, Ltd

Principal Architect, Co-Founder - Cloud Applications, ML, NLP

Yekaterinburg

Feb 2007 - April 2018

Project: System for electronic documentation exchange, allowing to collaborate in creation, reviewing, approving and/or declining documents electronically.

- Built entire engineering team from the ground up and provided strategic leadership, guiding the company to success in bringing products to market.
- Organized development and releasing of a system doing sentiment analysis and document segmentation to identify similarities for further processing

SKILLS

- Core: Enterprise Architecture, Clouds, API Design (REST, GraphQL, gRPC), Languages (Java, Python, C/C++, Go, JavaScript/TypeScript), Web Applications (Full Stack Development - Node, React, Angular), Distributed Systems, Deep Learning Frameworks (PyTorch, TensorFlow), Computer Vision, NLP, MLOps Practices, Model Optimization
- Cloud & Infrastructure: Container and Orchestration (K8s, GCP, AWS), IaaS (Terraform), CI/CD, Service Mesh, Cloud-Native Patterns, Identity & Secret Management, Observability, Monitoring & Logging
- Data: Databases (SQL/NoSQL), Distributed Computing (Spark, Databricks), Data Processing (Pandas, NumPy), Data Warehousing, Stream Processing, ETL Pipelines, Monitoring & Experiment Tracking

EDUCATION

Ural Federal University

MS with major in Computer Science & minor in Math; Magna Cum Laude

Yekaterinburg

2019

MICS

- **Ural Federal University** - reading lectures on courses of "Functional programming" and "Enterprise Applications"
- **Algonquin College of Applied Arts and Technology** - reading lectures and facilitating the course of "Enterprise Application Programming"
- **Volunteering** - Coaching boys U13 local basketball team (13-14 y.o)
