};
```

//Highlights of Qualifications

- Collaborated with multiple tightly knit teams of artists, designers, and other programmers to develop 2D and 3D games and apps in Unity with C#, Cocos Creator with Typescript, custom engines in C++, and UE4/UE5 with C++ for 9+ years
- Designed, maintained, and optimized clean and readable code and documentation for systems in various games and apps throughout career
- Managed Repositories in GIT and Mercurial on multiple projects for 8+ years
- Utilized scrum development to lead a team of app developers and coordinate tasks to complete rapid prototypes and meet goals during weekly sprints
- Created dynamically linked libraries (DLLs) written in C++ and utilized them in both Unity and UE4 to extend engine capabilities in quick and efficient ways
- Communicated with peers and coworkers via Slack, Discord, and Skype to share vital information and complete tasks in a timely manner
- Experienced in investigating issues, creating actionable bug reports, and utilizing debugging tools such as breakpoints to find effective solutions

//Education

Bachelor of Information Technology (Honors)

Game Development and Entrepreneurship

Ontario Tech University

3.14 / 4.3 GPA

Sept. 2015 to Jan. 2020

//Working Experience

Software Engineer - Mega Jump Halfbrick+

Iron Fox Games

Jan. 2024 to Aug. 2024

- Developed a faithful recreation of the original Mega Jump, scripted in C# with Unity using the original Objective-C source code as a reference
- Utilized interfaces to genericize powerups and scripted unique functionality for each of them to empower the player
- Created a single animation state machine and one set of generic animation clips used by all of the game's playable characters by utilizing sprite library assets to switch between original character sprites

Lvl. 29 Game Programmer

//Resume.h:

```
class ContactInfo
{
    public string Address = "373 Compton Cres, Oshawa, ON, L1G8C7";
    public string PhoneNumber = "(807)-228-1521";
    public string EmailAddress = "raymond.dee@ontariotechu.net";
    public string DemoReels = "https://tinyurl.com/theraydeedemoreel";
};
```

- Replicated particle systems using original textures and Unity's particle editor based on original formatted "plist" data

//Working Experience - Cont.

Software Engineer - Card Scramble: Viola's Diner

Iron Fox Games

Sept. 2024 to Sept. 2025

- Developed a live service cozy puzzle game, scripted in Typescript using Cocos Creator
- Designed and utilized custom formatted JSON files to load grouped data for game assets at runtime
- Architected and scripted a system to sequence player objectives and dialogue to allow the player to interact with the game environment in meaningful ways and deliver narrative beats with the given context
- Created deep verification routines to ensure that existing JSON data would not soft lock the game and surface detailed messages indicating how to address errors at load time for the design team
- Baked 3D texture data into 2D sprites to be utilized in custom shaders written in GLSL to allow 2D objects to be textured in 3D space

//Project Experience

Engine Programmer - Shadow's Play - Game Prototype

Ontario Tech University, Game Development Workshop II

Sept. 2016 to April 2018

- Developed a game prototype in C++ to apply and showcase knowledge of game design, computer graphics, animation, sound design, and 3D modelling which exceeded the expectations of professors and attendees alike
- Effectively utilized Object Oriented Programming to create diverse game objects and inherit transferrable properties from a base class in C++, receiving a score of 92% for their implementation
- Communicated with development team of five to compile assets and implemented them into the game's framework in a timely manner
- Programmed and systematized a polymorphic state manager to swap between game states instantaneously
