PROFESSIONAL SUMMARY

Decisive, resourceful, and results-driven **Senior Integration & Verification Engineer** offering 20+ years of experience testing, integrating, and verifying applications for a world-renowned telecommunication corporation. Recognized as a strategic problem solver with an impressive record of evaluating operations, uncovering deficiencies, and introducing process improvements that align with immediate and long-term objectives. Offering a robust knowledge of Cloud Native design and test principles with a proven history in supporting all areas of the development pipeline. Confident and multilingual communicator who builds strong working relationships, translates technical information into meaningful terms, and effectively collaborates with diverse stakeholders daily.

KEY STRENGTHS & SKILLS

- | | | |
|---------------------------------------|----------------------------------|---------------------------------|
| ✓ Solution Integration & Verification | ✓ Scripting & Test Automations | ✓ Documentation & Reporting |
| ✓ Implementation & Configuration | ✓ Technical Support & Consulting | ✓ Leadership & Team Building |
| ✓ Testing & Troubleshooting | ✓ Data & Log Analysis | ✓ Multitasking & Prioritization |

Technical Skills: TCP/IP | Wireshark | 3GPP | 4G/5G Radio | Open Radio Access Network (O-RAN) | SUSE Linux Enterprise | RedHat OpenShift | RHOCF | RH ACM | Ubuntu | Docker | Kubernetes | Helm | Prometheus | MetalLB | Cinder | Docker | VMware | Google Distributed Cloud Edge | Ericsson Cloud Container Distribution Single Server | KVM | VMware | OpenStack | Python | Scripting (Bash, Sh) | ansible | Jenkins | CI/CD | Git | JIRA | VoLTE | IP Multimedia Subsystem (IMS) | SIP | VoIP | TRex (network traffic simulation tool)

Languages: English | Italian | French | Spanish (beginner) | Greek (beginner)

PROFESSIONAL EXPERIENCE

Ericsson – Montreal, QC

Senior Cloud RAN Integration & Verification Engineer

2021 to Present

- Drive the day-to-day deployment, validation, and automation of Cloud Radio Access Network (RAN) and Open Radio Access Network (O-RAN) platforms such as Ericsson Cloud Container and Red Hat OpenShift (RHOCF) for multinational corporations with over 100,000 employees
- Implement, integrate, configure, and verify solutions into the lab environment using various tools and languages including Git, XML, YAML, Python, Ansible, Bash and Jenkins
- Identifying and writing test cases when fault slip analysis indicates that the issue could have been detected in early phases of verification
- Conduct comprehensive testing and simulations to prepare platforms before the application development phase
- Run manual and automated test cases to confirm software features and functionalities are working properly
- Maintain the simulation and testing tools and perform troubleshooting to investigate and address escalated issues
- Coach team members on protocols, procedures, and continuous integration and deployment (CI/CD) pipelines
- Accountable for optimizing network functions and streamlining laboratory processes to maximize efficiency

Key Achievements:

- ✓ Successfully avoided significant delays and additional production costs by uncovering a critical issue that went unnoticed by the other labs and was causing a 50% reduction in traffic capacity on the Cloud RAN platform
- ✓ Spearheaded an in-depth investigation with the Design Team to isolate a recurring problem in the Ericsson Cloud Container platform that was triggering signal disruptions and potentially disastrous outages in the radio network

PROFESSIONAL EXPERIENCE CONTINUED

Senior Engineer

2019 to 2021

- Tasked with developing a compact version of Ericsson's IP Multimedia System (IMS) solution on the Cloud Execution Environment (CEE Openstack)
- Led the implementation activities in the 5-person team by delegating duties, prioritizing tasks, and rectifying defects
- Produced and tested deployment guides and authored Ansible scripts for the vIMS nodes to achieve automation
- Answered questions and resolved problems to help international counterparts with their local implementations
- Served as the subject matter expert for Java Common Auto Tester (JCAT) matters on the 5G core testing team
- Executed stability test cases for the 5G core containerized session management function (cSMF) component
- Coded Gherkin steps in JAVA to add new system functionality and strengthen the automated test cases

Key Achievement:

- ✓ Streamlined deployment timelines of the IMS solution from multiple weeks down to a few hours by automating procedures and introducing a detailed installation guide that served as a valuable reference for new users

IMS Solution Professional

2011 to 2019

- Provided Tier 2 and Emergency Support for IMS products to telecom clients across Europe and North America
- Responded to high-priority escalations related to solution deployment, data recovery, and other technical concerns

Key Achievements:

- ✓ Ranked as a top performer amongst the 25-member support team at Ericsson by consistently going above and beyond performance expectations for prominent clients such as AT&T, T-Mobile, Comcast, and Telefonica
- ✓ Travelled to Madrid at the beginning of the London Olympics and eliminated network level recovery issues with HLR-FE and CUDB that received negative media coverage for Ericsson due to the mass network outages

Multimedia App Server (MMAS) Technical Coordinator

2010 to 2011

- Coordinated the production of Component-Based Architecture (CBA) by liaising between users and designers
- Participated in weekly meetings with the CBA design teams to share requirements and remove roadblocks

Certified Senior Solution Architect & Integrator

2003 to 2009

- Oversaw the design and implementation of value-added IMS solutions into the client's technical infrastructure
- Defined project scope, gathered requirements, and delivered pre- and post-sales support to clients and partners

Key Achievements:

- ✓ Recruited by senior leadership at Ericsson to orchestrate an 8-month consulting project for Vodafone Portugal to seamlessly develop and integrate a PBX SIP trunking solution within Vodafone's network architecture
- ✓ Pioneered a Multi Access Extension (MAE) Solution to substantially reduce service costs for Portugal PT

EDUCATION & PROFESSIONAL DEVELOPMENT

Bachelor of Electrical Engineering | McGill University – Montreal, QC

Cloud Native, Experienced Assessment | Ericsson Academy – Montreal, QC

The Mirantis OCM100 (OpenStack Certification) | Mirantis Training

VoLTE with IMS Focus
