Education

University of Guelph

Bachelor of Engineering (B.Eng.), Computer Engineering

2019 – 2024

- Relevant Courses: Software System Development and Integration, Data Structures and Algorithms, Large-Scale Software Architecture Engineering, Analysis and Design of Computer Algorithms

Experience

Software Developer

May 2023 – Dec. 2023

RBC

Toronto, ON, Canada

- Developed and maintained internal advisor tooling built in Angular and Node.js, ensuring compliance with enterprise vulnerability scans and enhancing application security
- Remediated 450+ vulnerabilities, reducing overall vulnerability count by 75% and improving system reliability and performance through dependency updates and code refactoring across multiple advisor-facing applications
- Updated the front-end application from Angular 6 to Angular 16, resolving visual and functional issues
- Led migration to Red Hat OpenShift and Elasticsearch database platforms, refactoring backend services for platform compatibility and implementing secure handling of sensitive data
- Collaborated with cross-functional teams in an Agile environment to deliver production releases with minimal downtime

Full-Stack Software Developer

May 2022 – Aug. 2022

System1

Guelph, ON, Canada

- Designed and implemented full-stack features using Angular and C#, powering experimental advertisement delivery systems
- Developed an internal Node.js library to standardize organization of front-end Angular component across multiple applications, improving developer productivity
- Expanded REST API functionality and implemented xUnit tests to validate data flow integrity

Software Quality Engineer

Jan. 2022 – Apr. 2022

System1

Guelph, ON, Canada

- Led the integration of end-to-end and component testing using Cypress, involving writing comprehensive documentation and leading Cypress onboarding sessions for the broader team
- Managed weekly production deployments across a 3-stage QA pipeline, ensuring stability and testing capability
- Increased test coverage by 40% through refactoring outdated Mabl tests and implementing new scripts
- Organized and led multiple bug bashes in order to identify and resolve key issues in the codebase

Full-Stack Software Developer

May 2021 – Aug. 2021

EduShare

Waterloo, ON, Canada

- Built a React-based interactive platform to assist teachers, parents, and students in lesson planning, assignment preparation, and analytical tracking
- Integrated the KaTeX library to utilize user input in real-time LaTeX rendering for custom formatting, improving processing and loading times by 70%
- Implemented mathematical problem generator using Algebra.JS alongside the MathQuill API, supporting dynamic inputs and producing readable equations with solutions
- Collaborated with the UI/UX team to redesign key front-end app components, improving overall user experience

Technical Skills

Languages: JavaScript, TypeScript, C#, Java, Python, SQL, C, HTML/CSS

Developer Tools: Jenkins, Git, GitHub Actions, Cypress, Docker, SonarQube, Postman, Gradle, Linux/Unix

Frameworks: Angular, React, Express.js, .NET, JUnit, xUnit
