Professional Experience

Co-Founder/Product Engineer - GrubChain -Payment Provider

Vancouver, BC — 08/2025 - Present

- **Achieved sub-1-week iteration cycles** by leading end-to-end design and delivery of a distributed cloud platform operating internationally, coordinating engineering, infrastructure, and compliance workflows across three time zones.
- **Delivered 7,000+ real-time user capacity** by architecting a scalable, cloud-ready system with optimized validation pipelines, eliminating pre-event bottlenecks and passing all load tests.

Technical Product Manager - ProShop ERP -Manufacturing SAAS Company

Vancouver, BC — 01/2024 - 09/2025

- **Accelerated engineering throughput by 10%** and cut escaped bugs by 20% by implementing data-driven workflows, enforcing design rigor, and strengthening system reliability and release performance.
- **Safeguarded project ROI** by redirecting engineering effort from a misaligned feature to a validated one, aligning stakeholders through refined technical briefs to ensure on-time delivery.
- **Increased release cadence 6x** and boosted adoption 18% by optimizing distributed build pipelines, introducing automated performance safeguards, and enforcing engineering SLAs across 4 major feature launches.
- **Reduced support tickets by 15%** and improved NPS by partnering cross-functionally to deliver clear release documentation and training that increased feature adoption.

Software Engineer - ProShop ERP -Manufacturing SAAS Company

Vancouver, BC — 09/2022 - 01/2024

- **Reduced integration risk** by collaborating closely with designers and product managers to deliver end-to-end features spanning APIs, backend services, and user-facing web interfaces
- **Saved \$400K+** in acquisition costs by delivering a production-viable full-stack prototype within one month, enabling a build-vs-buy decision for a scalable, reliable in-house platform.
- **Increased model uploads by 10%** and reduced external tool usage by delivering a production-grade web application with optimized rendering and fault-tolerant data flows that improved latency and decision speed.
- **Improved system reliability** by implementing structured logging, metrics, and end-to-end instrumentation, enabling faster debugging and reduced defect reproduction time

Game Developer - Hololabs -Center for Digital Media Partnership

Vancouver, BC — 05/2022 - 08/2022

- **Designed and delivered a mobile AR gameplay feature in Unity**, leveraging iterative prototyping and A/B testing to enhance user immersion and spatial interaction, resulting in a 50% increase in engagement.
- **Improved spatial consistency by 50%** by engineering deterministic object-persistence logic that resolved tracking drift in 9 of 10 player tests, ensuring stable scene understanding.

Junior Software Engineer - Knowledge Network -BC's public streaming service

Vancouver, BC — 05/2021 - 04/2022

- **Shipped to more than 200,000+ weekly users**, directly improving mobile viewing performance and reliability on both Android and iOS.
- **Scaled the streaming service's reach and increased watch time** by architecting a standalone video player library with integrated Chromecast support, enhancing playback reliability and enabling casting to new devices.

Education

Simon Fraser University – BSc in Computer Science, Certificate of Business in Innovation and Entrepreneurship

Project Management Institute – Certified Associate in Project Management (CAPM) - PMP Exam Candidate

Skills

Software Engineering & Tools: • Python • JavaScript/TypeScript • C/C++ • Kotlin • React • Flask • Node.js • Ruby on Rails • Docker • Git • Jira • Figma • Notion

Data, Systems & Infrastructure: • API Design • Micro services fundamentals • Data modeling (PostgreSQL, SQL, DynamoDB, Redis) • Real-time data ingestion • API design • Distributed systems • Distributed queues • Scalable service design • Caching strategies • Async processing

Product & Platform Leadership: • Platform product strategy • Data-driven roadmaps • Full lifecycle ownership
