Experience

Pipeline Developer

DNEG – Montreal, Quebec

April 2025 – September 2025

- Short-term full-time contract with DNEG Stereo as a software developer.
- Assigned multiple, small projects to modernize pipeline tools to Py3 and to be Linux and Windows compatible.
- Performed interviews to gather user stories as well as feature requests and any issues with existing workflows.
- Updates included existing to-dos, some new feature requests, and then ticketed future work.
- Created new documentation, expanded on existing documentation, and added internal code comments.

Junior Software Developer (Houdini)

Technicolor Creative Studios – Montreal, Quebec

October 2023 – March 2025

- Worked as part of the Houdini team supporting creative departments, maintaining toolsets that required specialist knowledge, and providing the platform for other teams to build on and work within.
- Helped with Py3 migration efforts by auditing our repos, writing up work to be done, completing assigned work, and onboarding another developer to help with our efforts.
- Increased test coverage and worked to setup automated CI/CD technologies with the help of the DevOps team. Used a TDD methodology when working on new code to ensure coverage was maintained.
- Started code refactoring efforts to move siloed code into a centrally available location to enable more workflows for other teams.

Software Developer / Assistant Technical Director (ATD)

DNEG – Montreal, Quebec

September 2021 – October 2023

- Moved from my role as an ATD to that of a Software Developer where I supported, maintained, and developed the core monolithic technologies.
- As an experienced ATD, I worked both solo and as part of a larger team and was expected to speak on behalf of the pipeline support team during meetings with the production team, provide updates regarding development tasks to supervisors, and onboard the newer members of my team.
- Support and development work required being able to work with multiple DCCs (Maya, Houdini, Clarisse, Nuke), read and understand existing pipeline tooling and architecture, and deploy code within an established standard and release cycle.

Education

BSc with Honours in Computer Science

University of Ottawa, Ottawa, Ontario, Canada

April 2021

- Acquired skills in the field of Computer Science and learned how those skills are applicable in the current world of business and information technology.
- My final school year consisted of learning in more depth about such topics as: security concepts, networking and networking security, and computer graphics. Projects for these classes involved using many tools such as Node.js, multiple VMs, OpenCV, and CryptoPP.
- Honours project involved working with Completely Autonomous Electric Vehicles in a simulated environment with the use of Python vision scripts.
- Have acquired experience programming in Python, Java, C, C++, and web development while also learning base programming language concepts.

Advanced Diploma in Photonics Engineering Technology

Niagara College, Welland, Ontario, Canada

April 2016

- Niagara College provides the largest photonics training labs in Canada.
- Gained skills in laser, electro-optical, and electronic technologies.
- Finished an eight-month photonics research project in applications of webcams for the purpose of increasing computer accessibility. This was accomplished by using the input from the webcam, without its infrared filter, and machine vision to detect the direction of eye-gaze.

Technology and Languages

- Python
- Linux
- Houdini
- Git
- USD
- SQL
- PyQt
- C++
- HTML
- CSS
- PHP
- JavaScript

Troubleshooting

In my various technical roles, my ability to troubleshoot issues has been paramount. Whether it has been reading bug reports and finding their root causes, developing my own code and figuring out why it is not acting as expected, or interpreting a user reported issue directly, each situation requires breaking down the problem into smaller and more manageable pieces.

Communication

As a part of multiple global teams, good communication skills have always been beneficial. They allow me to clearly convey issues and ideas related to the technology we were working with to our stakeholders and with fellow team members. This communication can be in the form of creating or conversing on work tickets, writing documentation, giving presentations, or providing reviews of others' work.

Learning

In all my roles, quickly learning new technologies and skills has been very important to my success and my ability to contribute to my team. Learning to use new tools has occurred best through a combined use of video tutorials, guides or official documentation, and hands on learning while working on smaller projects.
