WORK EXPERIENCE

IBM Canada

Software Developer

May 2022 – Present

Fredericton, NB

- Designed and implemented features, enhancements, and fixes for enterprise security software used by thousands of global customers.
 - Developed features for security event data collection, parsing, and transportation supporting 100k+ application deployments.
 - Delivered enhancements including TLS certificate management, IPv6 support, event transmission via TCP, HTTPs, and Kafka, and product reliability, usability, and customization improvements.
 - Tools: C++, Windows API, OpenSSL, WiX Installer Toolset, GoogleTest.
- Managed development and architecture of a greenfield web application.
 - Planned, prioritized, and broke down work and requirements, designed application architecture, set up application CI/CD and frameworks.
 - Designed and implemented RESTful API, database, user authentication/authorization, and third-party API integrations.
 - Tools: Java, Go, SQLite, Gradle, Mage, JUnit, Testify.
- Built and supported DevOps processes and infrastructure.
 - Enabled automated building, testing, scanning, signing, and publishing of software applications.
 - Introduced containerized build environments.
 - Tools: Jenkins, Docker, Artifactory, compliance and scanning tools.

IBM Canada

Security Content Developer (Student Intern)

Sep. 2021 – Dec. 2021, May 2020 – Dec. 2020

Fredericton, NB

- Managed development of application to scan IBM QRadar SIEM security events against YARA rules.
- Created custom rule packages and correlations to enhance security event detection for hundreds of customers.
- Conducted hands-on security research to meet evolving customer requirements.

Siemens Canada

Software Developer (Student Intern)

May 2021 – Aug. 2021

Fredericton, NB

- Built API endpoint to parse XML geolocation data for enterprise applications.
- Led development and testing of user-facing terminology changes across UI and backend systems.

J.D. Irving, Limited**Jan. 2019 – Apr. 2019***Security Analyst (Student Intern)**Saint John, NB*

- Directed project to locate and secure sensitive data across organizational file systems.
