

NARISARA TOCHAMNONG

SOFTWARE DEVELOPER

Backend-focused full-stack developer with hands-on experience building scalable platform services, including role-based access control (RBAC), comprehensive audit logging systems, and RESTful API architectures. Experienced in service-oriented architecture, database design, authentication systems, and collaborative development workflows using GIT for version control. Proven ability to design and implement secure, maintainable backend services while working closely with cross-functional teams and third parties. Strong technical foundation in modern JavaScript, TypeScript, React, Node.js, Tailwind CSS, PostgreSQL, and MongoDB with demonstrated experience implementing access control models and audit logging systems.

CONTACT

Calgary, AB
Tel: (236) 869-8506

SKILLS

- React, Next.js 14
- TypeScript, JavaScript
- Python, SQL, C#
- RESTful API
- NextAuth.js, OAuth, RBAC implementation
- MongoDB, Mongoose ODM
- PostgreSQL, PrismaORM
- Database Design
- Service-oriented architecture, Modular architecture patterns, Separation of concerns
- REST API integration, ETL pipelines, automates sync

EDUCATION

DIPLOMA SOFTWARE DEVELOPMENT - SOUTHERN ALBERTA INSTITUTE OF TECHNOLOGY (SAIT) **2023-2024**
GPA of 3.97
Relevant Coursework: Web Development (HTML, CSS, JavaScript), Object Oriented Programming (Python, C#), Database Design and Programming (SQL), and Software Analysis and Design

DIPLOMA UX DESIGN – TAMWOOD CAREERS **2022**
Graduated with over 93% of achievement through designing projects and presentations.
Relevant Coursework: Design Thinking Process, Visual Design Concepts and Design Tools for UX Designers, and Quality Assurance for UX

EXPERIENCE

JUNIOR SOFTWARE DEVELOPER – SOUTHMEDIC INC. (BARRIE, ON) **CURRENT**

Platform Service & Security:

- Architected and implemented role-based access control (RBAC) system with permission services and authentication using NextAuth.js, managing user roles, permissions, and secure access across the platform
- Built comprehensive audit logging framework capturing all CRUD operations on batch records, providing full traceability and compliance tracking for pharmaceutical manufacturing processes
- Designed electronic signature system with password verification for section and row-level signoffs, implementing dependency validation to ensure proper authorization workflows
- Developed service-oriented architecture with modular permission services, validation services, and business logic separation for maintainability and scalability

Backend Development & APIs:

- Designed and developed 30+ RESTful API endpoints for a pharmaceutical batch record system using Next.js 14 API routes with TypeScript

- TailwindCSS, styled-components, PostCSS, CSS-in-JS
- Custom component libraries
- Zustand, React Hooks, AG Grid
- Git, GitHub
- Jest, Playwright
- UX and UI design
- Design Thinking
- User Flows
- Wireframing
- Prototyping
- Visual Design
- Figma

- Implemented hybrid database architecture using PostgreSQL (Prisma ORM) for relational data and MongoDB (Mongoose ODM) for document storage
- Designed normalized database schemas with proper indexing, foreign key relationships, unique constraints, composite indexes, and referential integrity rules for data consistency
- Integrated external REST APIs including UKG API for employee data synchronization using Axios with OAuth authentication; built ETL pipelines with automated daily synchronization using cron jobs
- Connected to Unipoint SQL Server database using mssql driver for document extraction via parameterized SQL queries

Platform Features & Automation:

- Built training compliance module with automated workflows, gap analysis, and real-time validation ensuring regulatory compliance
- Developed notification and validation systems providing real-time feedback and data integrity checks across platform services
- Implemented automated data synchronization workflows for employee records and document management

Frontend & Full-Stack:

- Developed complex frontend architecture using Zustand for state management with modular slice pattern
- Integrated AG Grid for high-performance data grids and React Hook Form for form validation
- Built reusable component libraries ensuring consistent UI/UX across the application

Collaboration & Quality Assurance:

- Utilized Git for version control with feature branching, pull requests, and collaborative development workflows on a multi-developer team
- Established testing infrastructure with Jest (unit tests) and Playwright (E2E tests) for quality assurance
- Collaborated with stakeholders to analyze requirements and deliver effective solutions

INFORMATION DESIGN STUDENT (INTERNSHIP) – LUNIKO CONSULTING (CALGARY,AB)

JAN 2024 – MAY 2024

- Website visual design: Improved website structure and visual presentation through strategic wireframing, layout design, and graphics creation to enhance user experience and drive lead generation. Tool used: Figma. Platform: Squarespace
- Marketing materials design: Strategically design visually appealing marketing materials such as downloadable booklets, brochures, proposals, etc., using design tools like Figma, Canva, and PowerPoint to communicate the company's value proposition effectively
- Podcast video editing: Created engaging short-form video content (reels) using CapCut, consistently producing and posting podcast highlights on the company's LinkedIn to enhance social media presence
