

TREVOR WARD

EDUCATION

1986-1990	Carleton University Bachelor of Computer Science
1982-1985	Ryerson Polytechnical Institute Certificate of Computer Business

SECURITY CLEARANCE

Clearance Type	Held By	Expiry
Secret	Trevor Harrison Ward	2032-05-06

PROFILE

Mr. Ward is a highly skilled Software Developer, Architect and Visionary with 30+ years' experience. He is customer and quality focused with experience in conceiving, developing, delivering and maintaining Financial and Enterprise-based solutions, with five patents in UI and experience processing. Mr. Ward is a team player with results-oriented approach, leveraging an aptitude for quickly creating fully functional prototypes, enabling the team to accelerate development work. He maintains a stellar reputation for customer satisfaction, innovation, creativity, problem resolution and quality and has generally been the go-to-guy when someone has a problem.

Environments: Groovy, Fluent, Java, JavaScript, Angular, C/C++, XFA, XML, HTML, HTML5, Temenos Maestro, Temenos Journey Manager, Temenos LMS, IntelliJ, Eclipse, Git, Jira, Jenkins, Artifactory, Agile, Adobe AEM, LiveCycle ES3 [PR8], LiveCycle Designer ES3, XML, OracleSQL, XSD, SAP, SVN.

PROFESSIONAL HISTORY

Projects 21

Temenos Canada

Senior Technical Lead – Full Stack Developer

March 2022 – April 2025

37 months

Contact: John Clagnan
Title: Director Journey Manager
Phone: located in Australia
Email: john.clagnan@temenos.com

Mr. Ward performed his services as member of the Temenos Journey Manager development team as the Lead and Full Stack Developer for the Springboard Product. The role includes all aspects of planning/design/development/deployment/third-party integrations/testing, documentation and interacting with Partners. Focus on Form Design, development, calculation and validation scripting using Temenos Maestro Designer, journey flow via narrative and Workspaces job controller along with backend services integration and data modeling running on the Temenos Journey Manager infrastructure. Bi-directional integration with the Temenos LMS loan and account management system.

Mr. Ward's responsibilities included:

- Provided detailed analysis, architecture for a flexible implementation of a Web Form infrastructure using Temenos Maestro and Temenos Narrative.
- Worked with UX team to deliver the best user experience.
- Analysis, architecture and implementation of backend services infrastructure using Temenos Journey Manager, creating starting point solutions for Deposit Account Opening and Loan and Account Origination integrating combinations of them into the Temenos LMS environment.
- Lead collaborative team to extend and enhance multiple solutions leveraging that infrastructure.
- Troubleshooting – investigation of production and non-production problems and Client issues
- Provided feedback to other parts of the Product Development team.
- Wrote documentation on various parts of the Springboard Solution.

Environment: Groovy, Fluent, Java, JavaScript, Angular, XML, Temenos Maestro, Temenos Journey Manager, Temenos LMS, IntelliJ, Git, Jira, Jenkins, Artifactory, Agile

Project 20

City National Bank

Consultant - Senior Technical Lead

June 2022 - December 2022

7 months

Contact: Jonathan Solowey
Title: Vice President
Phone: 213-673-9294
Email: jonathan.solowey@cnb.com

Work in a project consulting environment and provide the technical lead in the planning, analysis, development, testing and transitioning to live customer solutions. Provided and assisted with architecture requirements.

Mr. Ward's responsibilities included:

- Provided detailed analysis, architecture for a flexible implementation of a Web Form infrastructure using Temenos Maestro.
- Continued analysis, architecture and implementation of backend services infrastructure using Temenos Journey Manager, supporting a multitude of solutions.
- Provided guidance on transitioning from Composer based forms to Maestro based forms
- Troubleshooting – investigation of production and non-production problems

Environment: Groovy, Fluent, JavaScript, Angular, XML, Temenos Maestro, Avoka Composer, Temenos Journey Manager, Windward, eSignature, OneSpan, IntelliJ, Git, Jira, Azure, Agile, RPA, Salesforce

Project 19

City National Bank

Consultant - Senior Technical Lead

April 2020 - November 2021

19 months

Contact: Jonathan Solowey
Title: Vice President
Phone: 213-673-9294
Email: jonathan.solowey@cnb.com

Work in a project consulting environment and provide Mr. Ward's responsibilities included:

- Provided detailed analysis, architecture for a flexible implementation of a Web Form infrastructure using Temenos Maestro.
- Lead team to implement multiple solutions leveraging common content.
- Worked with Client's Business team and end users to review business and technical requirements and processes to create design specification for the application, identify gaps and to validate and ensure alignment with the on-line solution.
- Continued analysis, architecture and implementation of backend services infrastructure using Temenos Journey Manager, supporting a multitude of solutions.
- Lead collaborative team to extend and enhance multiple solutions leveraging that infrastructure, including integration with OneSpan, RPA and Salesforce.
- Prototyped (coded) a various solutions to solidify requirements.
- Provided guidance on transitioning from Composer based forms to Maestro based forms
- Troubleshooting – investigation of production and non-production problems

the technical lead in the planning, analysis, development, testing and transitioning to live customer solutions. Provided and assisted with architecture requirements.

Environment: Groovy, Fluent, JavaScript, Angular, XML, Temenos Maestro, Avoka Composer, Temenos Journey Manager, Windward, eSignature, OneSpan, Client Internal Systems, IntelliJ, Git, Jira, Azure, Agile, RPA, Salesforce

Projects 17-18

Temenos Canada (Avoka Canada)
Senior Technical Lead

January 2017 - March 2020
39 months

Contact: Scott Dunbar
Title: Executive Level Technical Leader
Phone: 303-800-5979
Email: sdunbar@temenos.com

Mr. Ward performed his services on the following projects. In addition, provided feedback into the Product and Services teams on product and process improvements.

Project 18

Temenos Canada (Avoka Canada)
Senior Technical Lead – Client 2

October 2017 - March 2020
30 months

Work in a project consulting environment and provide the technical lead in the planning, analysis, development, testing and transitioning to live customer solutions. Provided and assisted with architecture requirements.

Mr. Ward's responsibilities included:

- Provided detailed analysis, architecture for a flexible implementation of a Web Form infrastructure using Avoka Maestro.
- Worked Temenos/Avoka and Client's UX team to deliver the best user experience.
- Lead team to implement multiple solutions leveraging common content.
- Worked with Client's Business team and end users to review business and technical requirements and processes to create design specification for the application, identify gaps and to validate and ensure alignment with the on-line solution.
- Continued analysis, architecture and implementation of backend services infrastructure using Avoka Transact Manager /Temenos Journey Manager, supporting a multitude of solutions.
- Lead collaborative team to extend and enhance multiple solutions leveraging that infrastructure.
- Prototyped (coded) a various solutions to solidify requirements.
- Lead the adoption of Windward, pixel perfect output, integration into the solution
- Lead on eSignature integration, leveraging OneSpan and internal services
- Provided guidance on transitioning from Composer based forms to Maestro based forms
- Troubleshooting – investigation of production and non-production problems

Environment: Groovy, Fluent, JavaScript, Angular, XML, Temenos Maestro, Avoka Composer, Temenos Journey Manager, Windward, eSignature, OneSpan, Client Internal Systems, IntelliJ, Git, Jira, Agile

Project 17

Avoka Canada

Senior Technical Consultant – Client 1

January 2017 – October 2017

9 months

Work in a project consulting environment and provide the technical lead in the planning, analysis, development, testing and transitioning to live customer solutions. Provided and assisted with architecture requirements.

Mr. Ward's responsibilities included:

- Provided detailed analysis, architecture for a flexible implementation of a Web Form infrastructure using Avoka Maestro.
- Worked with the Avoka and Client's UX Teams to address and help define the Client's user experience requirements.
- Lead team to quickly implement multiple solutions leveraging that common content.
- Worked with Client's Business team and end users to review business and technical requirements and processes to create design specification for the application, identify gaps and to validate and ensure alignment with the on-line solution.
- Provided detailed analysis, architecture for a flexible implementation of a backend services infrastructure using Avoka Transact Manager, connecting to various client and third-party services.
- Lead collaborative team to quickly implement multiple solutions leveraging that infrastructure.
- Designed and created test harness infrastructure.

Environment: Groovy, JavaScript, XML, Avoka Maestro, Avoka Transact Manager, Jira, Agile

Project 16

Agriculture Canada

Programmer Analyst / Technical Architect

April 2013 – December 2016

44 months

Contact: Steph Parent
Title: Team Leader - Grants and Contributions Delivery Systems (GCDS),
Agriculture and Agri-Food Canada / Government of Canada
Phone: 613-773-0389

Mr. Ward's responsibilities included:

- Provided detailed analysis, architecture to rewrite the entire Grants and Contributions system around e-forms architecture, leveraging LiveCycle ES 3.0, Java, JavaScript, and HTML5.

- Worked with Business team and end users to review business and technical requirements and processes to create design specification for the application, identify gaps and to validate and ensure alignment with the e-forms solution.
- Prototyped (coded) a few variations to solidify requirements.
- Designed and developed very interactive dynamic Application e-forms using AEM LiveCycle Forms Designer which handled multiple application program streams presented in a clean simple manner, while maintaining WCAG 2 compliance.
- Received quote from Director of Project “I think that the design that has been put forward looks fabulous – it is clean, easy to understand and you have managed to take a very complex budget/work plan and present it in a way that is intuitive and user-friendly”.
- Created detail design document detailing the implementation requirements
- Integrated the Adobe LiveCycle solution with SAP via shared directory and Job / Response file processing
- Designed, developed and integrated extensive XML based electronic forms required to do extremely large interactive data collection requirement
- Design and developed forms management frameworks extensively to support integration with Web Services and to capture and populate relational database
- LiveCycle Designer is used to author forms and document templates and used in the development of the forms
- Designed, developed and maintained multiple complex LiveCycle Applications via LC Workbench.
- Designed, developed and maintained multiple LiveCycle Component API extensions using Java and leveraging SQL Queries to interact with the Oracle Database.

Environment: LiveCycle ES3 [PR8], LiveCycle Designer ES3, XML, OracleSQL, XSD, Java 1.6, Javascript, HTML, SAP, SVN

Project 15

**Canadian Food Inspection Agency
Form Analyst / Technical Architect – Part-time**

**March 2015 – March 2016
13 months**

Contact: Miranda Ducarme
Title: **Export Transformation Team Manager**
Telephone: [\(780\) 395-6717](tel:7803956717) Cell: [\(587\)989-9717](tel:5879899717)
E-mail: Miranda.Ducarme@inspection.gc.ca
Address: 8403 Coronet Road North West
Edmonton AB T6E 4N7
Canada

Phone:

Mr. Ward’s responsibilities included:

- Provided detailed analysis, prototyping and architecture to consolidate the entire CFIA set of Export Forms which currently stand in the tens of thousands of individually maintained documents and over one hundred thousand generated export certificates.
- Goal to reduce the cost of maintaining the source content and provide better data integrity.

- Analysis of Data requirements and recommendation that the Standard UN/CEFACT SPSCertificate Schema for Import/Export be leveraged for both future Electronic delivery and current Form Generation.
- 15 Dynamic Prototype Forms created, to date, that account for roughly half of all certificates. XFA Fragments used extensively to optimize for maintainability, reuse and cost reduction.
- Scripted data mapping model created to handle and simplify the usage of vast complexity of the UN/CEFACT data standard D.14A SPSCertificate.
- Dynamic Multilingual language selectable forms leveraging common script fragment architecture.
- Dynamic security masking that automatically fills unused data space.

Environment: LiveCycle Designer ES3, XML, XSD, Javascript, LiveCycle ES3 Output.

Project 14

**4Points – Alliance for Audited Media
Consultant**

**March 2013
1 month**

- Extracted data from complex Excel spreadsheet to a defined XML schema format and scripting
- Required many “workarounds” to be able to extract all required data automatically

Environment: XSLS, XML, XSD

Project 13

**Canadian International Development Agency (CIDA)
LiveCycle Consultant**

**January 2013 – March 2013
3 months**

Contact: Robert Beaudry
Title: Acting Director
Phone: 343-203-5692
eMail: robert.beaudry@international.gc.ca

- Conducted analysis of the business and technical requirements, validating and ensuring alignment with the overall solution including e-forms which were produced in LiveCycle ES2.5/ES 3.0
- Designed and developed complex dynamic, interactive e-forms architecture using LiveCycle Forms Designer, Java and JavaScript, following Accessibility guidance (use of XML). This exercise was one of a proof of concept to demonstrate and prove LiveCycle solutions viability
 - CIDA required that certain technical show stoppers could be successfully navigated using LiveCycle
 - Demonstrated through the use of best practices, some minor platform configuration changes and through design and development how to achieve enhanced systems performance and to obtain successful systems responses
- Provided LiveCycle ES2.5/ES3 Training and Knowledge Transfer
- Provided guidance, sample content and components for complex dynamic forms solutions
- Implemented workarounds to provide Accessibility support on complex tables that were required to be part of the solution

- Designed forms management frameworks extensively to support integration with Web Services and to capture and populate relational database
- LiveCycle Designer is used to author forms and document templates and used in the development of the forms

Environment: LiveCycle ES2.5/ES3, LiveCycle Designer ES2/ES3, XML, JavaScript

Project 12

**Natural Resources Canada
LiveCycle Consultant**

**December 2012
1 month**

Mr. Ward's responsibilities included:

- Provided knowledge transfer of LiveCycle ES3 Process Management and LiveCycle Designer
- Assisted with PDF Signature processing issues, reviewed design and code and helped provide some modifications to address the issues
- Intended for use via Web Services.

Environment: LiveCycle ES3, LiveCycle Designer ES3, XML

Project 11

Pluri Software Inc. (Co-Owner)

**April 2012 – Present
35 months**

Mr. Ward Co-founded “www.pluri.com” to create a Cloud service providing an environment to facilitate “Trusted Personal Recommendations”. He acted as CTO April-October 2012, with responsibilities and development of all technical aspects of the site. He conducted minor ongoing maintenance and feature development to maintain the service.

- Conducted business and technical analysis and aligned and validated them to the e-Forms
- Dynamically produced HTML5 templates via PHP5 script using SQL queries to get appropriate content and repeating content and dynamically manipulate the XML structure of html templates
- Styling using CSS3 and JavaScript object model manipulation
- Used PHP5 and SQL to update the DB on submission or AJAX queries
- Created documentation such as design mock-ups

Environment: HTML5, CSS, JavaScript, PHP5, MySQL, XML

Projects 1-10

**Adobe Systems Canada (Accelio/JetForm/Indigo)
Sr. Computer Scientist**

**May 1988 - January 2012
322 months**

Contact: Dave Welch
Title: Vice President, Marketing Insights and Operations
Phone: 408-536-2176
Email: dwelch@adobe.com

Mr. Ward performed various roles on the following projects.

Project 10 - Adobe Systems Canada

Web Experience Management

Sr. Computer Scientist

June 2011 - November 2011

6 months

To allow business users to maintain bulk of web content, prototyped feature for Web Experience Management (CQ/CRX) solution set, enabling the team to accelerate the development work.

Mr. Ward's responsibilities included:

- Learned and delivered in short enough time to be included in up-coming release
- Programmed using Java 1.5/JavaScript to manipulate CQ marketing web platform
- Designed and developed interactive XML based e-forms as part of the integration exercise with the CQ5 DAM
- Developed forms management framework for integration and use via Web Services
- CQ CRX provides a solution set for provide business e-Solutions
- Developed the e-forms architecture and environments for FormServer and LiveCycle which leveraged J2EE OSGI architecture constructs to enable rapid and reusable development

Environment: Java 1.5, JSP, JavaScript, JQuery, CRX, CQ, HTML, Eclipse, Vault, XML, SVN

Project 9 - Adobe Systems Canada

LiveCycle Flex Wizard Application

Senior Computer Scientist/ Programmer Analyst

November 2005 – December 2011

74 months

Mr. Ward architected the LiveCycle Flex Wizard Application which enabled non-programmers to create rich internet/intranet applications. He shepherded the concept-to-delivery of Guided Activity feature which leveraged existing client LiveCycle XFA Form content to deliver easily repeatable rich internet applications without coding. As part of the Adobe/Macromedia Integration team, working directly with the VP of Adobe Development, Mr. Ward helped create presentations and visited clients to determine what solution would provide the most value, and then architected and developed the solution with a small Flex/Java team, operating as the external face of the team.

Mr. Ward's responsibilities included:

- Identified the leverage Adobe's merger with Macromedia provided to LiveCycle (joining Flex and XFA)
- Performed analysis of the business and technical requirements and architected the prototype of initial solution in 3 weeks
 - The prototype was passed on to Adobe executive and resulted in a change in product direction. (Also more recently prototyped running on Phone/Tablets)
 - Four patents were filed on various aspects of the "Guide" feature. Three of the patents have been awarded
- Met with Adobe clients to discuss and provide architectural guidance and analysis to garner feedback on the design, development and deployment of LiveCycle

- Designed and developed e-forms architecture including workflow processes, dynamic interactive e-forms and components using Adobe LiveCycle ESx (ES/ES2/ES2.5/ES3.0) and Adobe LiveCycle Forms Designer ESx (various under development versions), as part of the development of the Guides feature
 - The XML based Guide definition is a linked augmentation to the standard XFA Form
- Consulted with clients and users to gather, review and analyze detailed customer requirements and processes (technical, business and user) in order to identify gaps or issues, and troubleshoot those issues where necessary
 - Built prototype solutions using client XML data and LiveCycle XFA forms, ensuring alignment to the business and technical requirements
- Multiple components exist with their own JavaScript and CSS files within
 - Cascading Style Sheets (CSS) are integrated into the LiveCycle forms as well as other Adobe Software solutions. Customization can be required
- Led the mapping of application requirements to the LiveCycle process maps to build and then verify functionality of the XML based definition for Guide Components as they would operate in client environments, built and assisted with multiple process mapping projects
- Provided regular guidance and coordination of the technical team, including development of procedures as a team goal. Agile development procedures were put in place, and adjusted during the projects extended life span, Scrum being the final form taken
- Communicated gaps and issues to clients, management, testing and development teams
- Developed and presented proposals, project reports and issues to the stakeholder team using MS Office
- Reviewed and prepared documents with Stakeholders
 - These included customer requirements, development proposals, strawmen applications, status reports, change requests, documentation and proposed testing models
- Used Adobe AIR as one of the Delivery vehicle mechanisms for the ways Guides could be used.
- Programmed LiveCycle component extensions in Java 1.5 to broker data and process manipulation
- Designed and developed the forms management framework, for use via Web Services and or capture using relations databases
- The product set is designed to support eBusiness solutions of Adobe clients
- The development environments for FormServer and LiveCycle leveraged J2EE OSGI architecture constructs to enable rapid and reusable development

Environment: Flex, ActionScript, Java, JavaScript, XFA, XML, XSD, Fiber, PDF, HTML, LiveCycle ES/ES2/ES2.5/ES3.0[ADEP10] [PR8], Eclipse, Perforce

Project 8 - Adobe Systems Canada

Formserver Performance

May 2003 – December 2005

Senior Computer Scientist/ Programmer Analyst

32 months

Formserver (LiveCycle's Forms Engine pre LiveCycle name change) Performance was a solution that increased server throughput by fifty times to meet the high-volume requirements of the enterprise market space. Mr. Ward identified, designed and implemented the leading-edge, on-demand, server generation of client-side data-capture solution. The solution was to leverage the innate ability of PDFs to have "edits" appended to them as small additional objects instead of rewriting the entire file. We now take an already rendered PDF and just append the updated data to

it, saving a huge amount of server-side processing. We can also do that with the XFA template content and allow the client to do the rendering when very dynamic forms are required to be delivered at very high volume on the server.

Mr. Ward's responsibilities included:

- Analyzed, architected, designed and developed the e-forms architecture including workflow processes, dynamic interactive e-forms and components using Adobe LiveCycle Enterprise Suite including LiveCycle Forms Designer, in order to validate the developed Forms Solutions under as many client scenarios as possible (use of XML)
- Consulted with clients and users to gather and analyze detailed customer requirements (systems and user), identify gaps or issues, and troubleshoot those issues where necessary
- Reviewed and developed documents with Stakeholders. These included customer requirements, development proposals, strawmen applications, status reports, change requests, documentation and proposed testing models
- Led the mapping of application requirements to the LiveCycle process maps, to validate the Forms development work
- Developed and presented proposals, project reports and issues to the stakeholder team using MS Office
- Developed application technical architecture, framework and strategy, to meet the requirement that clients needed our product to operate faster. Solution was 50 times faster
- Analyzed, prototype and evaluated multiple alternative approaches and solutions to meet the performance problem presented by our customers
- Evaluated hardware and software operating systems relative to their ability to support specified requirements and provided guidance as to expected outcome
- Created proposals for new capabilities and functional specifications
- Designed and developed the forms management framework for use via Web Services and or capture using relations databases
- The product set is designed to support eBusiness solutions of Adobe clients
- The development environments for FormServer and LiveCycle leveraged J2EE OSGI architecture constructs to enable rapid and reusable development

Environment: Java, PDF, XFA, LiveCycle, XML, Eclipse

Project 7 - Adobe Systems Canada

Adobe Forms Designer Import SDK

Sr. Computer Scientist

May 2002 – September 2003

17 months

Import SDK infrastructure for Adobe Form Designer (pre LiveCycle name change) allowed for easy extension and customization of Import Plug-ins, which allowed faster delivery of basic import support of multiple formats while still allowing for extreme breadth features. Developed the IFD and PDF import options and directed the Word import.

Mr. Ward's responsibilities included:

- Translated and developed dynamic, interactive e-forms conforming to Adobe LiveCycle XFA XML format

- Consulted with clients and users to gather, review and analyze detailed customer requirements and processes (systems and user), identify gaps or issues, and troubleshoot those issues where necessary for forms and workflow
- Reviewed documents with Stakeholders
- Developed and presented project reports, issues and change requests to the stakeholder team using MS Office
- Developed technical architecture, framework and strategy, for the importing of alternate forms content and formats into LiveCycle Designer
 - This allowed clients to leverage the Designer's abilities much more quickly and at a much lower cost, leading to faster sales for Adobe
- Created proposals for new capabilities, High-level architecture documents, detail functional specifications and design guide for adding new import types

Environment: C/C++, PDF, IFD, Adobe Forms Designer, XML

Project 6 – Adobe Systems Canada (Accelio/JetForm)

Web Statements

January 2000 - May 2002

Sr. Computer Scientist

29 months

Mr. Ward was the developer/ Customer interaction for dynamic online statement generation for the Web and e-mail. His responsibilities included:

- Created Mobile delivery prototype using JetForm Web Output Pak
- Assisted in Architecture and design of JetForm Web Output Pak which is an XML based job and programming language used to combine XML and non-XML data with multiple form template definitions and invoking various common and custom service components
- Developed the Concept to Design to Sale of SAP Web Output Pak in three days during custom visit
 - Allowed for simple, quick, high quality web based Adobe LiveCycle forms integration with SAP
 - Fast Dynamic Adaptable Charting feature for complex and high volume statement production

Environment: Java, ASP, JSP, C, HTML, XFA, C++, PDF, XML

Project 5 - JetForm Software Limited

formsplanet.com

March 1999 - January 2000

Sr. Computer Scientist

11 months

Mr. Ward built a Web-based solution for SOHO market to enable easy branding of high quality business documents and collateral. He built analytics that uncovered a go-to-market issue, causing a re-direction of effort. Extensive use of XML.

Environment: ColdFusion, ASP, FormFlow99, HTML, XML

Project 4 - JetForm Software Limited

Applied Technology Team

June 1997 - March 1999

Sr. Computer Scientist**22 months**

Mr. Ward provided quick, production grade, reusable Java and C based extensions to the core product via diverse swat team providing direct interaction with JetForm's largest clients.

Environment: Java, C, JetForm Design/Filler/Central, XML

Project 3 - JetForm Software Limited**Creator / Developer - Bizforms****August 1995 - June 1997****Sr. Computer Scientist****23 months**

Mr. Ward was the jack of all trades for BizForms and OEM versions of Shrink Wrap solution for 123 branded high quality business documents and collateral for the SOHO market.

Environment: C/C++

Project 2 - JetForm Software Limited**Data Integration Team****January 1995 – August 1995****Manager****8 months**

Managed team of five developers implementing integration tools for PC Docs, Documentum, Filenet, and SAP.

Project 1 - JetForm Software Limited**Design/Filler/Fillerc, Printer****May 1988 - January 1995****Developer****81 months**

Mr. Ward developed features for JetForm's Form authoring and runtime tools. Created Sticky Notes, minimized system memory requirements, built vector support print driver for IBM Lexmark Laser.

Environment: C/ C++, Assembly

McDonald's Canada**Bookkeeper and System Developer****January 1985 - August 1990****40 months**

Mr. Ward developed a large Lotus 123 spreadsheet to help manage and track McDonald's owner-operated restaurants finances. Went to Hamburger University to learn APL to help with generating custom reports for the accounting department. Part-time created and maintained financial and logistics tracking systems for McDonald's Ottawa market.

Environment: Lotus 1-2-3, PDP-11

TECHNICAL SKILLS

Java
Flex (actionscript/mxml)
Javascript
C / C++
XFA
Adobe Guides Guru / PDF
