ABOUT ME

Recent graduate with a solid foundation in software development, embedded systems, and real-time computing, eager to apply technical skills and internship experience in a junior developer role.

SKILLS

Programming

Python, Java, C, C++, C#,
HTML/CSS, JavaScript,
TypeScript, Go, Swift, Dart

AI Tools and Concepts

OpenAI, Cohere, CursorAI,
CodeX, N8N, LLMs, RAG, scikit-
learn, PyTorch, TensorFlow

Database

MongoDB, SQL, MySQL,
PostgreSQL, Firebase, MS Access

Tools & Frameworks

Springboot, Angular, React,
NextJS, Express, Django, NodeJS,
Android Studio, Docker, .NET,
Git/Github, Selenium, Pygame,
Flutter

Protocol and Formats

JSON, HTTP, REST, XML, SOAP

EDUCATION

University of Ottawa

BASc in Computer Engineering
2019–2025

WORK EXPERIENCE

Founder

07/2025 - Present

Zeruno Code

- Zeruno Code is an AI-powered tool for learning about AI tools, programming languages, tech stacks, databases, mobile development, and data analysis.
- Integrated Cohere LLM into the app using 2-stage RAG pipeline
- Built full frontend and backend for the web application on NextJS, React Framework
- Fully learned and utilized SEO techniques for traffic routing and server-side rendering
- Developed strategy for marketing product and product exposure

AI and Full Stack Developer

10/2025 - Present

Connex

- Created training models for AI/ML model for in-house processing and automation
- Use N8N to automate workflows using AI capabilities with business process automation
- Analyze and understand functional business requirements and design specifications
- Design, develop, enhance and implement applications and integrate custom solution with other back end solutions

Junior Developer

05/2022–08/2022 | 05/2023–08/2023 |

Novo Nordisk (3 Internships)

01/2024–04/2024

- Created technical campaign workflows and creating queries to extract validate campaign data with MySQL
- 1 year in creating REST APIs using Express and Java
- 1 year in creating REST APIs using Django and Python
- Collaborated within a SCRUM environment to deliver solutions through iterative and regular sprint reviews
- Leveraged AEM integration with Adobe Campaign to build and deliver dynamic, brand-aligned email templates and reusable content for automated multi-channel campaigns
- 8 months in managing projects from start to finish by organizing tasks, collaborating with teams, and tracking progress in real-time for streamlined execution on Adobe Workfront

Full Stack And Database Developer

09/2022 - 12/2022

Innovation, Science and Economic Development Canada

- 4 months in creating high-performance applications using C# for core logic and integrated them with user interfaces built on .NET framework
- 4 months of CI/CD practices using Docker to streamline deployment of .NET applications
- Implemented a streamlined UI, allowing non-technical staff throughout the whole department, to work with data from the databases easily and efficiently
- 4 months working heavily with SQL to manage databases, and link existing databases with different MS Office tools to create programs

Full Stack Developer

04/2020 - 08/2020

The Ottawa Hospital

- 4 months developing a mobile application using the languages Kotlin, and Flutter SDK
- Learned to integrate external library written in C++, to be used in the project
- 4 months of experience with creating APIs and third-party libraries and their APIS
- Application used mobile camera with OpenCV and was able to track fiducial markers, take videos, share videos, obtain the orientation of the AprilTag marker

PROJECTS

Facial Recognition and Object Detection Software

- Developed and deployed a real-time facial recognition and object detection system in Python using OpenCV and TensorFlow, capable of accurately identifying faces and detecting custom-trained data through computer vision.
- Implemented pre-processing pipelines for image normalization, grayscale conversion, and facial feature extraction to improve detection accuracy and model performance.
