EDUCATION

Bachelor of Science, Computer Science Physics and Astronomy Joint Honours, Co-op

- University of Manitoba, Winnipeg, MB

Expected: Dec 2025

GPA: 4.1/4.5

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, HTML, CSS, SQL

Frameworks: Vue, React, Grails, Java Server Faces (JSF), Spring Boot, Spring Hibernate

Tools: Git, IntelliJ, VSCode, Eclipse, Unix, SAP HANA, SAP Data Services, Stonebranch, Jira, Confluence

PROFESSIONAL EXPERIENCE

Data Office Intern, Co-op Work Term 3

May 2025 – Dec 2025

Investors Group Financial Services – Data Office

- Utilized SAP HANA, SAP Data Services, SQL, and Stonebranch in an ETL (Extract Transform Load) data office
- Worked with business users to create new workflows for loading in new types of data in mortgage and general data ingestion of IGM
- Built and automated data conformity checks between source and transformed mortgage data, increasing breadth of detection of inconsistencies and improving overall data health
- Investigated and resolved 10+ failing ETL checks, updating old load logic and enhancing the checks themselves to be more in line with new data

Java Web Developer, Co-op Work Term 2

May 2024 – August 2024

Agriculture and Agri-Food Canada (AAFC) – Information Services

- Contributed to a full stack web application suite supporting agricultural grants and programs, working with Spring Boot and Hibernate for the backend and Java Server Faces (JSF) for the front end
- Developed a reusable event tracking component to standardize event log access for the whole application suite
- Resolved 15+ bugs, from minor UI fixes to backend logic fixes that interacted with Excel
- Created Junit tests with over 90% code coverage while updating the consistency of existing tests
- Updated legacy code to be more in line with newer standards, increasing readability and conformity

JavaScript/Grails Web Developer, Co-op Work Term 1

May 2023 – August 2023

Agriculture and Agri-Food Canada (AAFC) – Integrated Application Services

- Worked in an Agile development environment to deliver new features and fix bugs in a Vue.js web application.
- Collaborated with a team to translate Excel taxation calculators into a React web application to improve accessibility and maintainability
- Refactored and optimized several web pages to a newer standard to improve state management

PROJECTS

NBA Data Mining / ML (Academic)

- Built machine-learning models in Python to predict NBA game outcomes using historical box-score data
- Performed data cleaning, feature engineering, and model evaluation, comparing accuracy across different algorithms

2D Water Simulator (Personal)

- Built a 2D shallow-water simulator using 1D Smoothed-Particle Hydrodynamics (SPH) particles to simulate wave propagation and interactions
- Verified behaviour with test scenes, run with Jupyter for plots and metrics

Spotify Stats-Viewer (Personal)

- Developed a Vue.js web application using the Spotify API and OAuth 2.0 to visualize listening trends like top 10 artists and songs, gaining experience with REST APIs and interactive UIs

EXTRACURRICULARS

Organization of Physics Undergraduate Students Tutor

October 2022 – February 2024

- Tutored 20+ students who needed help in first and second-year physics courses, helping them better understand the subject material through solving examples and guiding them through problems
