## WHO AM I

I go by Xander, I have been working on and developing skills as a programmer since I was in middle school. I have worked to improve the range of skills I have and getting a diverse understanding of the many languages, techniques, and technology involved in all forms of development.

## SKILLS

High-level understanding of Java and C based compilers, and runtimes.

Familiar with Full-Stack development using different technology stacks such as LAMP, and MEAN.

Worked with standard C++ libraries to render and create console applications and a recreation of Tetris with OpenGL.

## EXPERIENCE

### SOFTWARE DEVELOPER • ARCHIPELAGO • 2 MONTH CAPSTONE

I worked with Archipelago as part of the Collage capstone project. Archipelago asked my group to develop an A.I based Object Detection program to identify objects coming on board and off board a vessel using the YOLO training model for development and Python's TensorFlow library.

### SOFTWARE DEVELOPER • HCL TECH • SEP 2022 • SEP 2023

I worked with HCL Tech for over a year and while working with them I engaged in business standard Fintech practices and technologies like Spring Boot, and Apache Kafka. As my first step into the business world of software development I enjoyed the environment for learning, and I got to lead an internal project while working on international online transactions in a microservice based development.

## EDUCATION

### COMPUTER SCIENCES • SEP 2020 • CAMOSUN COLLAGE

Two-year course covering Linux/Windows security, Java, C++, C#, Swift, Python, and Node JS. Working with technologies like AWS, Unity, and Docker. Completed course with a 3.7 GPA on Dean's Honor Roll.

## TEAM EXPERIENCES

For working on projects, I know the importance of communication, and team engagement. I have been a part of large developer projects within HCL (90+) and been in smaller development teams for Archipelago (3 person). From these experiences I know and actively develop communication skills second only to my ability as a developer.
