TECH

Python, SQL, AWS, APIs/Lambdas, JavaScript, Docker, Git, Bash/Batch

EXPERIENCE

Full-Stack Developer | **IBM** | Canada, Montreal (Hybrid)

April 2023 – Present

- Evolved a Payments as a Service Website used by major Canadian banks and companies alike
- Developed secure and scalable RESTful APIs (Lambdas) in **Python**, ensuring encryption and compliance with financial industry standards
- Designed API authentication/authorization flows for enhanced security
- Built automated unit and integration tests in **PyTest**, achieving 90%+ code coverage for payment APIs
- Refactored legacy Python code to improve maintainability, runtime performance, and memory usage by 30%
- Developed reusable Python modules for interacting with third-party services and internal microservices
- Collaborated on extra projects using Java Springboot with Microservices
- Created Low-level designs and implemented the API
- Actively monitored and maintained the production environment using **AWS**, **Datadog**, and **Jenkins**
- Collaborated with Product Managers, QA, and Security teams to deliver production-ready features
- Participated in code reviews and API spec discussions to align backend structure with frontend requirements

Software Engineer | **Horizons** | Canada (Remote)

February 2022 – April 2023

- Developed new features with React for a Broadcasting App used by the top 5 major networks in USA
- Broke down a monolithic backend written in JavaScript with Twilio APIs into modular microservices
- Designed and built multiple RESTful APIs to manage real-time communication, media streaming, and user data
- Implemented API rate limiting, logging, and error handling strategies to improve service reliability
- Improved backend API performance by 40% by restructuring endpoint logic and optimizing data access patterns

- Deployed environments using AWS and optimized cost of performance by more than 70%
- Wrote integration tests and Postman collections to ensure API consistency across environments
- First responder for major bugs/outages and led efforts for continuous integration and deployment

Software Developer | Kolineo | Canada (Remote)

August 2021 – February 2022

- Built RESTful APIs in **Python** to handle order processing, inventory tracking, and shipment automation
- Automated storage and transformation of large file contents using **Pandas**, improving data ingestion time by 60%
- Integrated third-party merchant APIs and ensured robust handling of API rate limits and error conditions
- Designed, containerized, and deployed microservices using **Docker** and **Kubernetes** on AWS, enabling rapid scaling and high availability
- Built Kubernetes manifests and Helm charts to automate deployment and service discovery across environments
- Created custom monitoring dashboards for API health checks using Prometheus and Grafana
- Developed Angular (TypeScript) UI for API endpoints and backend operations, with HTML/CSS styling
- Used Docker to containerize APIs for easy deployment of Lambdas on AWS for scalability

PROJECTS

Who's Faster? (Link: [Who's Faster App Link](#))

- Developed a mobile educational game for children using **Java** and **SQLite**
- Created custom sounds and UI from the ground up

Real Estate Data (Link: [GitHub](#))

- Utilized **Python**, **Spark** and **Snowflake** amongst many other technologies to collect and transform web scraped data. Data was then utilized to do a comprehensive analysis of the Montreal Real Estate market.

EDUCATION

Cybersecurity – University of Montreal (Polytechnique Montreal)

Computer Science – College Rosemont
