Professional Summary

Computer Science graduate from the University of Northern British Columbia with a passion for building scalable, secure software and distributed systems. Experience in full-stack software and web-based application development, with a proven ability to lead foundational product development in a fast-paced startup environment. Eager to apply skills in AI/ML and software engineering to solve complex, real-world problems.

Technical Skills

- Languages: JavaScript/TypeScript, Python, Java, SQL, C#, C
- Web: React.js, Node.js, Express.js, FastAPI, HTML/CSS, Tailwind, MUI, RESTful APIs, Redux/Context API
- Infrastructure & Tools: AWS (EC2/S3), Docker, Git, PostgreSQL, Vector Databases (Chroma DB), RAG(Langchain, Langgraph), LLM Integration, CI/CD, Agile/Scrum, Salesforce

Education

Bachelor of Computer Science, University of Northern British Columbia (2021-2025)

Relevant Coursework: Software development, Machine Learning, Database Management, Project Management

Experience

Technical Support Member (Contract) | Henry Schein One (12/25 - 01/26)

- Resolved 120+ technical cases over a 20-day period for Dentrix, the industry's leading dental practice management platform, maintaining a 100% customer satisfaction (CSAT) score.
- Performed advanced database configuration and troubleshooting to ensure system integrity and high availability for dental practices. Consistently exceeded SLAs by diagnosing and resolving complex software and network issues in a high-volume, fast-paced environment.

Full-stack AI intern | Aristomax Technologies Pvt. Ltd. (05/25 - 09/25)

- Owned the end-to-end architecture and development of "Botboard," a RAG-based chatbot platform. Built the React/Redux frontend and Python/Node.js backend. Reduced client chatbot deployment time from days to minutes.
- Engineered a Continual Learning (CLMR) pipeline for a 32-class YOLOv8 model. Solved a critical retraining inefficiency, cutting process time from days to hours while improving target class detection accuracy.
- Identified a bottleneck in the human-in-the-loop annotation workflow. Independently built and shipped a niche custom React-based data annotation tool as a public npm package. Impact: Achieved 100+ downloads in week one and cut image annotation time from minutes to seconds.

eLearning Research Lead Collaborator (Dean's Project) | UNBC (07/24 - 01/25)

- Acted as the Product Manager for an interactive VR Organic Chemistry platform. Defined the product roadmap, created the Business Requirement Documents (BRD), and directed the development team on execution vision.

- Marked assignments and provided detailed feedback to professors, identifying students' weak points to enhance teaching effectiveness.
- Mentored students in individual and group settings to improve understanding of complex computer science and math topics.

Projects

Parking Lot Management System

- Description: Currently solo-building a full-stack production-grade management system. Managing the entire lifecycle from database schema design to UI polish. Implemented dynamic fee calculation algorithms, real-time vehicle tracking, and a responsive dashboard for operators. Designed for scalability and modularity to ensure the codebase remains maintainable as features expand.
- Skills & Tools: Next.js, React Native

Point of Sale System Design

- Description: Collaborated with a team of four over four months to conduct field research and develop a Business Requirements Document and solution design for a general POS system. The project focused on identifying and incorporating specific business needs into the system design.
- Skills & Tools: Requirements analysis, system design, teamwork.

IoT Device Spoofing Attack Detection: Undergraduate Research

- Description: Led a scientific comparative analysis to study spoofing attack detection on IoT devices using CIC-IOT sensors database. Models deployed include legacy Machine Learning models such as Random Forest and Gradient Boosting Classifier models, as well as advanced Deep Learning Models such as LSTM networks with Bahdanau Attention Mechanism and Self-Attention Mechanism testing.
- Achieved a 96.2% accuracy score and a 99.2% ROC-AUC score.

Airline Database Implementation

- Description: Collaborated with a team of five to design and implement a basic relational database for an airline enterprise within 45 days, following a detailed Business Requirements Document. The project emphasized practical database design and efficient data management.
- Skills & Tools: SQL, database design, teamwork.

Key Achievements

UNBC Undergraduate Research Experience Award (2024)

- Recognized for exceptional performance and contributions to undergraduate research initiatives.

UNBC Undergraduate Entrance Award (2021)

- Awarded based on academic excellence and potential upon entrance into the university program.

X-Culture Certification (2020)

- Successfully completed the X-Culture International Business Program, demonstrating proficiency in global business collaboration and strategic project management.
