

EXPERIENCE

Software Application Developer (Integration Team)

May 2021 - Nov 2025

Case IQ

Full-stack Javascript development to deliver custom features and integrate client data on a case management system. Responsibilities include:

- Using Node.js & PostgreSQL to integrate HRIS profile data, implement custom features via workflows and scheduled scripts, migrate client database records, and fix bugs on existing features.
- Tracking features and timelines for projects in detail using Jira tickets and Monday boards, working closely with Business Analysts to ensure deadlines are met.
- Implementation of HTTP requests using client API documentation and Postman to test API functionality and debug.
- File management and debugging database, redis, and server containers for multiple projects through a Linux command-line in Docker container bash sessions.
- Deploy and debug project builds on UAT and PROD environments using Jenkins.
- Writing software documentation and performing peer-code reviews for Github pull requests.

Software Developer

Jan 2019 - May 2021

Vivosonic

Develop & maintain software used for auditory diagnostic testing and newborn hearing screening.

Responsibilities include:

- Development of a data import feature of diagnostic results using C# with WPF & XAML for desktop applications on Windows 8/10. The latest software version uses XML for diagnostic results, and the older version uses a BLOB. This tool allows users to import database records from the older version after updating.
- Redesigning database schema for increased performance and features using MS SQL Server and XML.
- Using PowerShell to create scripts that read diagnostic results and output specific data files (.txt, .csv, and .xml) which are analyzed by audiologists for research purposes.
- Creation of technical documentation with regards to software design and quality assurance to ensure compliance with the ISO 13485 standard.

Data Structures & Discrete Mathematics Teaching Assistant

Sept 2016 - April 2018

Queen's University

Held weekly office hours to support students with CS course material. Graded assignments and exams.

EDUCATION

Bachelor of Computing (Honours), Specialization in Computer Science

2014 - 2018

Queen's University, Kingston, ON, Canada

Languages and Technologies

JavaScript: Node.js, Seneca, Stream, Backbone.js, and jQuery.

C#: ASP.Net Core, WPF using XAML, XMLDocument, LINQ, and Entity Framework Core.

Python: Pandas and Numpy.

Technologies: Docker, Linux CLI, Git, PostgreSQL, Powershell, MS SQL Server, Jenkins, OpenGL, and Redis.

Other: HTML5, CSS3, Postman, Visual Studio, VS Code, LaTeX, Jira, Salesforce, and Yellowfin.
