SUMMARY

6+ year experienced Full-Stack Engineer with a strong background in Java and MySQL development with strong knowledge of automated testing and DevOps solutions. Proven track record in leading projects to enhance efficiency and quality, including implementing 1000+ automated tests, optimizing database operations by up to 10x, and transforming complex ideas into easily maintainable software leading to 40% revenue retention. Skilled in mentoring teams, improving developer productivity, and contributing to complex software solutions.

WORK EXPERIENCE

Senior Java/Angular Full-Stack Developer

08/2024 - Today

Intact, Montreal, Quebec

- Increased the speed of developer operations by 30% by contributing to the introduction of new technologies
- Forged 5 new workarounds and 9 bug fixes for production, unblocking 500+ policies and 10+ clients in production
- Corrected 1 critical security vulnerability using Kafka, leveraging Maven debug and debugging dependencies using Java, maintaining the application's security
- Acted as a mentor to the team by providing and documenting new knowledge acquired

Full-Stack Software Engineer

01/2021 - 08/2024

Prima Solutions, Brossard, Quebec

- Retained a key client responsible for 40% of revenue by designing, implementing, testing, and releasing a critical accounting automation feature. Tested through about 50 price points across tens of thousands of lines of code
- Led the implementation of a commission calculator enabling the company to save more than 2+ weeks per quarter of manual overhead, bringing new business from the reliability of the feature
- Decreased by up to 10 times the client database copy speed used by developers to reproduce bugs by developing a new multi-threaded tool, optimizing the speed of the 10+ developer database requests per month
- Pioneered the development of a regulatory feature with 80%+ code coverage using Mockito and JUnit that ensured the clients were following the law, saving thousands of dollars in fines
- Guided long-tenured co-workers in designing automated tests with a clean and lean approach, leading to decreased maintenance, a higher awareness of test tools, and 25% more throughput in the generation of tests

KEY TECHNICAL SKILLS

Languages: French, English, Spanish, Portuguese

Programming languages: Java, MySQL, JavaScript, Bash, Groovy, PEGA, ABAP, SAPUI5, Rust

Technologies: Jenkins, JUnit, Mockito, Git, API, Spring, Cucumber, Docker, Helm, Kubernetes, Angular, Vite.js, SvelteKit

Certifications: Cisco CCNA, CompTIA Security+

Open Source Contributions: 4 in Rust in [xd009642/tarpaulin](#)

EDUCATION

Bachelor of Computer Science - General Co-op

- Concordia University, Montreal, QC
