Summary

I specialize in research and development for natural language processing and virtual humans, as well as platform integrations, database and API systems, and pipeline management for VR and WebXR development. In addition to my technical skills, I have managed the SOC 2 compliance process and oversee IT, networking, and cybersecurity for the organizations I have worked with. I take pride in ensuring that all systems and processes are secure and meet the highest standards of quality and compliance.

Throughout my career, I have built pipeline management tools for AI and VR, allowing for seamless integration and efficient development processes. I have also played a key role in platform integrations, ensuring that all systems are integrated effectively and efficiently.

In terms of natural language processing and virtual humans, I have a deep understanding of the underlying technologies and have worked extensively with dialogue engines, machine learning algorithms, and other relevant tools. This expertise has allowed me to create sophisticated language proficiency assessment algorithms and build webXR and conversation engine frameworks for AI virtual human platforms.

As a dedicated and skilled technology manager, I am passionate about working on AI projects that push the boundaries of innovation and creativity. With my deep expertise in technical areas, I am committed to delivering exceptional results that exceed expectations. Whether it's building pipeline management tools, developing virtual humans, or creating language proficiency assessment algorithms, I am always striving to expand my knowledge and skills to meet the demands of any AI project.

Experience

Technology Manager Virtro Technology

Jul 2021 - Jun (4 years)

- Specialized in R&D for NLP and AI Characters and virtual humans - Develop and implement machine learning models
- Developed pipeline management tools for AI and VR development projects - System Architect of Virtro's proprietary conversation engine
- Manage AWS and Azure cloud resources
- Prototyped webXR framework for AI virtual human platform

Game Developer Virtro Technology

Jan 2018 - Sep 2021 (3 years 9 months)

- Developed and published AR and VR games
- Created framework libraries that standardized game development - Worked on projects with blockchain implementation

Database Administrator Luminous Auto Group

Oct 2016 - Feb 2017 (5 months)

Collaborated with the accounting team to gather requirements and design a customized database system that met the unique needs of the business, resulting in improved productivity and reporting capabilities.

Provided technical support and training to end-users, troubleshooted issues, and ensured the smooth operation of the database system.

Market Analyst

CALYFON (Group) Natural Health Products Ltd. May 2016 - Jul 2016 (3 months)

Conducted technical analysis on market trends and customer behavior to identify areas for potential growth and optimization.

Aircraft Maintenance Engineer Jul 2015 - May 2016 (11 months)

Education

British Columbia Institute of Technology

Bachelor of Technology, Technology Management 2023 - 2026

British Columbia Institute of Technology

Diploma, Computer Technology/Computer Systems Technology 2017 - 2019

British Columbia Institute of Technology

Diploma, Airframe Mechanics and Aircraft Maintenance Technology/Technician 2014 - 2015

Graduated with distinction.

Licenses & Certifications

Cloud Computing - Carnegie Mellon University M18CMU25683004

Skills

Java • Unity • C# • Git • Artificial Intelligence (AI) • Machine Learning • Web Development • Python (Programming Language) • Cloud Computing • Project Management
