Professional Summary

Solutions/Technical Architect and senior full-stack developer with extensive experience designing and delivering enterprise applications across healthcare, insurance, and cloud-native platforms. Adept at leading distributed teams, mentoring developers, and collaborating closely with architects, UX designers, and business stakeholders. Strong background in Java, modern JavaScript frameworks, cloud platforms (AWS, GCP, Azure), microservices, and scalable API design. Passionate about problem-solving using AI, emerging technologies, and building high-quality software.

Core Skills

Leadership

Team mentorship, cross-functional collaboration, distributed teams, technical design & architecture

Languages & Frameworks

Java, Spring/Spring Boot, JavaScript/TypeScript, React, Next.js, Vue, NodeJS, Python, HTML/CSS

Cloud Platforms & Databases

AWS (Lambda, Glue, DynamoDB, S3, SQS, CloudWatch), GCP (Cloud Run, PostgreSQL, BigQuery), Azure (IAM)

DevOps & Tooling

GitHub, GitLab, Jenkins, AWS CodePipeline/CodeDeploy, JIRA, CI/CD

Infrastructure

Tomcat, NodeJS, Nginx, IBM WebSphere, Docker, Heroku

Selected Projects

Record & Payer Viewer (2024–2025)

Built a patient-records platform for nurses and insurers using React, NodeJS, Python, Azure, and GCP. Worked with architects, UX designers, and business analysts to define requirements and deliver core platform functionality.

Hazelcast → DynamoDB Migration (2024)

Designed APIs, validation tooling, and deployment strategy to support a seamless migration from Hazelcast to AWS DynamoDB.

Apprenticeship Management System (AMS) (2020–2023)

Implemented Photo ID, SSO, and SMS features; built reusable React components and APIs integrating with DMV systems.

PointClickCare (2019–2020)

Developed secure RESTful APIs enabling cross-hospital patient-data sharing.

Insurance Data-Sharing Integration (2014–2018)

Created secure vendor-facing REST APIs for insurance data exchange.

Game Engine Components (2017)

Built REST API + MongoDB service on Heroku for weather-data integration supporting a global game engine.

Professional Experience

Quanphi / Accreon — Associate Architect / Senior Software Developer (2018–2025)

- Designed and contributed to healthcare Record Viewer and Payer Viewer platforms.
- Defined technical requirements and solution architecture in collaboration with senior architects.
- Mentored offshore development teams and authored design documentation and TDD artifacts.
- Supported AWS DynamoDB migration initiatives.
- Developed APIs and React features for PointClickCare.
- Delivered enhancements for AMS including Photo ID, SSO, and SMS modules.

Binary Star Consulting — Software Architect / Developer (2014–2018)

- Liberty Mutual: Retired legacy systems, supported migration to Bitbucket, and trained Agile teams.
- IceJam: Architected backend systems integrating a real-time weather engine using Java, Spring Boot, and Heroku.

Medavie Blue Cross — Analyst / Senior Software Developer (2002–2014)

- Designed and implemented enterprise applications including Pharmacy Value Finder, E-Billing, Options Calculator, and NS Prescription Monitoring.
- Served as Technical Lead for UI/UX and system architecture.
- Contributed to process engineering and RUP mentoring.

Education & Certifications

- Associate Cloud Engineer (2025)
- AWS Certification – Foundational (2023)
- AI Training — Quantiphi
- Bachelor of Computer Science — Dalhousie University / TUNS, Halifax, NS
- Diploma, Scientific Computer Programming — College of Geographic Sciences, NS
