Engineering
Co-op Program

Education

Bachelor of Science, Software Engineering Co-op

University of Alberta

5-year, Class of 2026

Technical Skills

Programming: Python | Java | Rust | C# | C/C++ | SQL | JS | TypeScript | MATLAB

Tools/Frameworks: Android Studio | Git | Django | React | React Native (Expo) | MongoDB | TensorFlow | Docker | Firebase | Flutter | ASP.NET | Entity Framework Core | PostgreSQL

Work Experience

ATG Sports Management – Full stack Software Developer

May 2025 – August 2025

- Contributed to the development of a **production React Native (Expo) mobile application** using **TypeScript**, supporting feature delivery across multiple user-facing workflows
- Integrated frontend features with **backend REST APIs** (.NET + PostgreSQL), handling data synchronization, loading states, and error handling in a live environment
- Optimized frontend-backend data fetching by reducing redundant **API** calls and improving request handling, resulting in faster screen load times and improved app responsiveness
- Utilized **Docker** to develop and test the application in a containerized environment, helping maintain environment consistency and reduce setup and integration issues across developers

GrowME Marketing – Junior Software Developer

May 2023 – August 2023, May 2024 – December 2024

- Assisted in the development of a **mobile application** leveraging **Flutter** to build front and backend functionality
- Developed a **Firebase**-integrated script using the **NDAX API** to automate real-time updates of cryptocurrency values
- Generated unit tests using **White Box** testing and a **top-down** approach, adhering to **SDLC** best practices to ensure app functionality and stability prior to launch
- Engineered a dynamic currency conversion system in **Flutter Flow** by integrating **Firebase** data, optimizing in-app financial calculations and enhancing user experience through automated exchange rate updates
- Spearheaded the development of an innovative **Django-based** platform to automate the extraction and reporting of client performance metrics from **Google Ads**, significantly enhancing operational efficiency for **100+** clients
- Engineered and deployed a robust website interfacing with **Google Ads** and **Google Sheets APIs**, transforming a weekly manual process into a streamlined, automated system, significantly reducing manual labor by **80%**

Personal & Course Projects

Student Calendar App (Capstone Project) – [GitHub](#)

Jan 2025 – April 2025

- Developed a student productivity and social engagement application using **Flutter** with **Firebase/Firestore**, designed to help University students manage academic schedules, discover events, and connect with peers
- Integrated the **Google Calendar API** to import users' schedules and **synchronize** changes in real time within the app
- Built a friend recommendation feature using a **graph-based** structure to identify mutual connections and shared context
- Developed a real-time campus **heatmap** system to visualize user density at study locations, **synchronizing** live location data to help students identify crowded and quiet areas across campus
- Adhered to software engineering practices guided by a **SRS**, incorporating **functional** and **nonfunctional** requirements

Android Studios App QRRush – [GitHub](#)

Jan 2023 – April 2023

- Android application inspired by Pokémon GO, users had access to an interactive map encouraging them to scan QR codes in the real world to earn scores and compete
- Contributed to the design and development of the application's profile page, encompassing both frontend and backend elements, ensuring a seamless user experience, integrating with the backend for **dynamic** content display
- Utilized **Firebase** for **asynchronous** backend services, including server and database management, ensuring robust data storage, real-time data synchronization, and seamless user experience
- Employed **Git** and **GitHub** for version control and collaboration, enabling efficient team coordination, code integration, and tracking of progress across multiple development stages
