Summary

Programmer with 20 years of experience in multiple forms of software development. Proficient with programming websites, mobile games and applications, and application software. Strong analytical skills and leadership experience. A team player that meets tough deadlines and will work hard for the bottom line. Adept at quickly learning new programming languages and techniques. With proven leadership and excellent communication skills. Completed a master's degree in information systems, studied 18 units of professional education, and currently pursuing a doctorate in information technology with a focus on business intelligence and data analytics to help teach and guide the next generation of IT professionals.

Skills

Languages

- PHP, .NET, and Ruby on Rails along with HTML, CSS, and JavaScript for web development
- Symbian C++ and Java ME for mobile development
- C# and Java SE for application software development
- LSL scripting on Second Life

Platforms

- SymbianOS for smartphones
- Windows, Linux (Ubuntu, Red Hat, and CentOS) and Mac for desktop
- Magento, Shopify and BigCommerce for ecommerce

Tools

- MySQL and MSSQL for databases, also familiar with other RDBMS such as Oracle and Access
- Visual SourceSafe and Subversion for source control and CVS
- Zend Studio, NetBeans IDE, and Aptana for coding
- Adobe Photoshop for web layouts and image editing

Work Experience

IT Consultant, Ecell Global Limited
Blackpool, United Kingdom

July 2025 – Present

Continued working for Ecell as a fully remote consultant under the company's headquarters in the United Kingdom, directly reporting to the Chief executive officer and handling day-to-day IT related concerns on business processes, data reporting, and testing out new software and tools.

Part Time Faculty, Angeles University Foundation
Angeles City, Philippines

February 2023 – Present

Started as part time faculty with the College of Computer Studies teaching computer science courses on Software Engineering, Automata Theory, Operating Systems, and Generative AI under the guidance of the Program Chair, Assistant Dean, and Dean.

Acquired Microsoft certifications on Azure Fundamentals, Azure Data Fundamentals, and Azure AI Fundamentals together with third year students using CloudReadySkills and Microsoft Build.

Hired as head of the Software Engineering department by the Chief executive officer and Chairman of the company after a brief stint with other jobs. Responsibilities include the management of software projects and assignment of tasks to lead software engineers, planning and implementation of team activities such as attending DevCon PH and training courses, coaching of senior members of the team, submission of weekly status reports to the IT Manager, submission of 3rd month, 5th month, and annual performance evaluation reports to the HR Manager, among others. Also involved in the screening and recruitment of new software developers and quality assurance engineers. Was sent by the company abroad to countries such as the United Kingdom and Malaysia to meet with business partners during project development.

Promoted to IT Manager after 3 years. Responsibilities include overseeing the whole IT infrastructure of the company from software to servers, brainstorming and development of new IT projects with the company directors, managing the budget of the IT department, coordinating with the Creative and Customer Service managers as well as the Finance and Production managers on all IT related concerns, submission of 3rd month, 5th month, and annual performance evaluation reports to the HR Manager, among others. Also involved in the screening and recruitment of new network and systems administrators, graphic designers, and developer support staff. Was also sent by the company abroad to its office and factory located in Blackpool, United Kingdom to meet and work with offshore personnel with plans on also being sent to the office located in Florida, United States in the future.

Handled the transition from work on-site to work from home for most office staff during the start of the COVID-19 pandemic last 2020. Accelerated the switch from using locally hosted and on-premises servers to hosted systems in the cloud. Evaluated cloud providers and chose the best option for the company's needs and criteria of cost and reliability. Also worked with ISPs to upgrade/downgrade the office internet connection as needed. Was working in office for the duration of the pandemic as on-site support for remote workers as well as IT on physical duty for the production team as face-to-face work was still being done at the manufacturing site.

Supervised the move of offices from 4 office centers to 2 and set up new machines as well as a new server room.

Performed database update from MySQL version 5.7 to 8.0 using Amazon AWS RDS Blue/Green deployment.

Facilitated change of internet plans which led to increased speeds at lower prices.

Projects managed include the following:

- Shopify website
Worked on setting up a Shopify store as the initial website for the Head Case Designs brand.
- Oracle EBS migration
Went on meetings with Oracle partner Inoapps MY on migrating the existing ERP to EBS.
- Oracle ATG website
Coordinated with the Oracle solutions provider teams E2X UK and Peak Indicators UK.
- Akamai migration
Worked on transitioning the image hosting server from local to cloud using Akamai.
- Magento website
Worked on transitioning the goheadcase.com website to the open source Magento platform.
- Amazon AWS migration
Moved the locally hosted Sage 200 application to the cloud using AWS EC2 instances as well as switching the image hosting server to use AWS CloudFront.
- Amazon RDS migration
Moved the locally hosted MySQL databases to the cloud using AWS RDS cluster.
- BigCommerce website
Worked on transitioning the goheadcase.com website from a self-hosted platform to the more robust BigCommerce platform under its enterprise edition.
- Amazon SP-API migration
Developed scripts that use the new Amazon SP-API to replace the old MWS API.

Senior Programmer, Auction.ph/Huchcode Corporation
Clark Freeport Zone, Philippines

December 2012 – July 2013

Was responsible for developing and maintaining several online games via an outsourcing contract with the company GameOn Co., Ltd. aimed primarily for the Japanese market.

Games developed include the following:

- Dragon Fantasia
A card-based game to be played online and on mobile, developed using the CodeIgniter framework.
- Legend of Souls
Worked on the backend of the online game that was built on the Ruby on Rails framework.
- Sengoku Girls Nine
Another card-based game found on the GREE mobile social gaming network. Developed new features such as Guild/Federation, Raid boss scout event, among others.

Developer Consultant, Elcell Philippines Inc.
Clark Freeport Zone, Philippines

December 2012 – February 2013

Served as developer consultant for the company's internal website Zero and for other related Sage processes. Also assisted in the development and training of newly hired developers. Upon the end of consultancy submitted technical documentation based on the requirements of the IT Manager.

PHP Developer, MetaLabs Clark
Angeles City, Philippines

September 2012 – December 2012

Was responsible for maintaining and expanding the company's Web and virtual world based social gaming system in the online game Second Life. Developed a Sim Monitor tool object that polls and stores different simulator region statistics using a combination of LSL for in-world code and PHP for the backend.

Software Developer, Elcell Philippines Inc.
Clark Freeport Zone, Philippines

June 2009 – September 2012

Started as Web Developer/IT Support in charge of maintaining and debugging scripts on Elcell's internal site built with PHP and MySQL. Helped maintain the company's online store on eBay and handled daily processing and upload of sales data. As IT Support, worked with the IT Manager in troubleshooting PC and basic networking problems. Also assisted Customer Service Representatives regarding technical questions on some of the items sold by the company (cables, adapters, etc).

Moved to role of Software Developer after 4 months. Put in charge of automation of daily processing of sales orders. Developed pages on the company's internal site to automatically download sales data and generate sales reports using various APIs. Also worked on the integration of several different technologies used by the company, such as inventory and business management software, and shipping label production services.

Promoted to Team Leader after 1 year and 2 months. Responsibilities include project management and assignment of tasks to other developers, mentoring and onboarding of junior members of the team, submission of weekly status reports to the IT Manager, submission of 3rd month, 5th month, and annual performance evaluation reports to the HR Manager, among others. Also involved in the screening and recruitment of new developers. Was also sent by the company abroad to its office and factory located in Shenzhen, China to deploy new systems and train personnel.

Studied and worked with various APIs/SDKs/Tools, namely:

- eBay API
Worked on automatically creating eBay daily downloads of Hardware and Accessory sales orders from the company's online store, generating Summary Sales reports, and marking eBay sales as dispatched – all via eBay Trading API. Also developed scripts to add, update, and remove listings. Created a subset of the company's internal site and submitted to the

eBay Developer Program for Compatible Application Check, which increased API calls from 5,000 to 1.5 million. Also handled the expansion of API use from 2 accounts on eBay UK to 4 additional accounts on eBay CA, HK, AU, and US.

- PayPal API
Developed pages to search and view the company's PayPal account transactions via PayPal API. Also created functionality to do PayPal refunds directly from the internal site.
- Sage 200 SDK
Created a C# window app used by the company's internal site to perform Sage 200 business management software tasks. These include Sales Order Processing, Purchase Order Processing, and Stock Management. Also developed code to accommodate certain customized features, such as support for foreign currency sales, multi-line orders, SKU matches, and auto-adjustment of payment values.
- Royal Mail Despatch Express
Worked on automatic barcode and shipping label printing using Royal Mail Despatch Express and created scripts that interface with Despatch Express to run the Zebra label printer.
- UPS WorldShip
Worked on automatic shipping label printing using UPS WorldShip via XML Auto Import and a custom daemon.
- Motorola Data Wedge
Configured barcode scanning on Symbol/Motorola devices using Data Wedge. Ensured that critical pages on the company's internal site were compatible to run on the mobile browser.
- Amazon MWS
Developed scripts that download, and mark sales orders as shipped, upload new listings, and update listing quantities on Amazon.co.uk and Amazon.com using Amazon's Marketplace Web Service. Was also in charge of managing item barcode numbers through GS1 UK.
- PlayTrade API
Developed scripts that download, and mark sales orders as shipped, update listing quantities on Play.com via the PlayTrade API.

Programmer, Auction.ph Corporation Clark Freeport Zone, Philippines

July 2006 – May 2009

Developed various projects related to different parts of Auction's online shopping site using PHP and MySQL. Worked with designers in editing HTML and CSS site issues. Implemented some site functionality using JavaScript and JavaScript libraries such as Prototype and jQuery. Used PEAR for PHP and Stored Procedures for MySQL. Assisted new hires to help familiarize them with the system.

Front-end projects developed include the following:

- 30 million Pabuenas ng Auction
The company's launching event. Handled the event pages, e-coupon generation for users, and the application for drawing of winners and E-Money prizes as specified by DTI.
- Coupon Mania and Chips
Developed features that offer discounts to site members in the form of coupons and chips.
- Auction.ph Stores
Seller pages with similar specifications to eBay Stores. Did everything from new site subdomain setup to opening/editing of individual stores and managing store listings.
- Homepage updating and renewal
Charged with the development and maintenance of the site's homepage.
- Member Registration
Also charged with code for the registration of new members to the site.
- Category Listings and Search
Optimized category listings pages and site search SQL queries together with the DBA.
- Escrow and Payment methods
Debugged errors and maintained code for the site's escrow system and payment functions.

Back-end or headroom tasks include the following:

- AMS or Auction Management System
Developed multiple tools such as transaction approval, events creation and membership statistics used by other departments such as Marketing, Finance, and CSRs.
- Server configuration

- Helped the Systems Administrator in setting up new web servers for the site.
- Email newsletters
 - Ran weekly member newsletters sending email to site's almost 2 million members.
- Tools for programmers
 - Created other site tools such as code uploading via PHP's SFTP functions and commit log viewing via SVN used by all programmers.

Mobile Developer, Wireless1 Interactive Inc.
Pasig City, Philippines

May 2004 – August 2005

Developed mobile games and applications using Java ME and Symbian C++. Learned mobile development mostly through self-study. Helped conceptualize different products for the company. Worked with a graphic artist on design and the images used in the applications, such as logos and sprites among others. Debugged all games and applications on multiple Nokia and Sony Ericsson handsets.

Finished games include the following:

- Kraken
 - Translated a classic Game & Watch Octopus game into a full screen Java ME game app.
- Square Off
 - Helped develop this Symbian C++ app that resembles a Tetris game where you can play against an opponent with the same app via Bluetooth.
- Madam Rosa
 - A Java ME app that helps you with decisions by showing random answers and quotes.

Finished applications include the following:

- FriendZone
 - The company's main product, where you can exchange pictures, info, and chat via Bluetooth. Developed versions in both Java and C++ to support multiple mobile handsets. Was able to successfully deal with numerous issues on Bluetooth functionality, as the APIs used were new at the time. The app was also posted by Globe on its mobile website for download.
- Dictionary2Go
 - A Java ME dictionary app that pulls definitions of words thru the web using GPRS. Also developed the back-end scripts on this project using PHP.
- Biorhythm
 - One of the company's most downloaded products. This Java ME app calculates your physiological, emotional, and intellectual cycles based on your date of birth.

Developer Trainee, National Telecommunications Commission
Quezon City, Philippines

April – May 2003

Worked with the Radio Regulations and Licensing Department and the Information Technology Unit (ITU). Acquired knowledge on Local Area Network management and Intranet services through the development of a prototype electronic licensing system in ASP.NET for the department. Was also tasked to create and submit different prototypes for the initial stages of a planned redesign of the NTC website.

Education

Angeles University Foundation, Graduate School

2024 – Present

Doctor of Information Technology with specialization
in Business Intelligence and Data Analytics

Currently enrolled

University of the Philippines, Open University 2020 – 2022
Master of Information Systems

Information System Project: TestTime, An Online Examination System

De La Salle University, Manila 2000 – 2004

Bachelor of Science in Computer Science with
specialization in Software Technology

Thesis: Rex, A Remote Execution Facility (nominated for Most Outstanding Thesis Award)

Awards: Dean's Lister for 1st Term, SY 2000 - 2001; 2nd Term, SY 2002 - 2003; 1st Term, SY 2003 - 2004; 2nd Term, SY 2003 - 2004; 3rd Term, SY 2003 – 2004

Activities: Web Team Head, DLSU Computer Studies Assembly (senior year); Software Technology Representative, Catch 2T4 Batch Assembly of the Student Council for one term

Certifications

Microsoft Certifications 2023 – 2025

Azure Fundamentals, Azure Data Fundamentals,
Azure AI Fundamentals

University of the Philippines, Open University 2022 – 2024
Professional Teaching Certification

Completed a program of 18 education units in preparation for teaching and the licensure examination for professional teachers

Certification of Eligibility for Civil Service 2008

Passed the civil service examination with a grade of 88 out of 100
