- 3- Designed and implemented a database to store and retrieve the data of Covid19 patients.

PROFESSIONAL EXPERIENCE

Mainframe Computer Operator

Pomeroy Technologies

March 2023 - Present

Montreal, Canada

- Managing and maintaining Mainframe system and its components, including IMS, CICS, DB2, JES2/3, and TSO.
- Ensuring timely and efficient batch processing by utilizing batch scheduling tools such as OPC, Control-M, CA-7, and ESP.
- Monitoring network devices which include Routers, Switches, Hubs, Gateways, Firewalls, and resource availability, reliability and performance using shared Tivoli on Demand Event Management Services.
- Monitoring and responding to alerts generated by tools such as Viewpt, Netview, Tivoli, and Omnibus.
- Performing system IPLs and handling system start-ups and shutdowns.
- Diagnosing and resolving system issues, performing 1st and 2nd level problem determination, and reporting issues to appropriate teams.
- Following Problem Management & Change Management requirements to ensure smooth operations and minimal downtime.
- Training and assisting operations personnel to ensure high levels of customer satisfaction.
- Escalating tickets as needed and collaborating with teammates to resolve issues in a timely manner.
- Maintaining up-to-date knowledge of procedures and providing input for process improvements.
- Escalating documentation, process, or procedure discrepancies to client representatives and Pomeroy Manager, and following up until resolved.

IT Administrator
Futures Group International
Kabul, Afghanistan

April 2013 – Dec 2016

- Successfully configured, deployed, and supported a diverse range of technology assets, including desktop PCs, laptops, MACs, servers, and LAN/WAN hardware.
- Maintained accurate records and documentation of all technology assets, procedures, and processes, ensuring the organization's IT infrastructure was well-organized and up to date.
- Administered a range of Office365 services, including Email, Skype for Business, SharePoint, and OneDrive for Business, maximizing productivity and collaboration among employees.
- Ensured the seamless operation of day-to-day network requirements, including user account management, internet access, LAN, WAN, VPN, and security management.
- Provided comprehensive hardware and software support for a variety of IT assets, including networks, servers, desktops, laptops, and office applications, ensuring the smooth functioning of the organization's technology infrastructure.
- Regularly updated hardware and software, performed regular data backups, and developed new processes to enhance the reliability and security of the IT infrastructure.
- Managed user accounts, workstations, and distribution groups within Active Directory, ensuring the security and efficient handling of the company's assets.
- Proactively participated in weekly team meetings with managers, contributing to the implementation of policies and procedures and ensuring their adherence.
- Collaborated effectively with regional office IT teams and provided supervision as needed, fostering a positive and productive working relationship.
- Delivered 1st and 2nd level help desk support for desktop users, both locally and remotely, providing timely and effective solutions to technical issues.

Network Operation Centre Technician
RANA Technologies Enterprises
Kabul, Afghanistan

April 2011 – March 2013

- Performed initial troubleshooting, problem analysis, and isolation of network and system events per NOC incident management guidelines.
- Provided 1st and 2nd level troubleshooting and support services for client Network devices and applications by actively monitoring Switches, Routers, and Servers.
- Monitored service interruption patterns to identify possible network issues.
- Resolved a wide variety of IT infrastructure incidents; LAN/WAN systems, routers, switches, firewalls, VoIP systems, servers, storage, backup, operating systems, and core applications.
- Collaborated with network engineers, and field technicians to effectively troubleshoot, resolve and add various types of networks and server infrastructure.
- Provided 1st level help desk support for desktop users, locally and remote.
- Monitored system alarms, analyzed severity, and performed initial triage.
- Opened Incident Tickets based on alarms, escalated the incident to respective teams, followed up the investigation process, and documented all the stages of incident resolution.
- Administered Windows and Linux servers, VMware, and Virtual environment.
- Worked with internal teams and external support vendors to resolve incidents, fulfill requests, implement changes, and conduct maintenance activities.
